Program Summary

The Manatee County Comprehensive Plan (Objective 10.1.6) requires Manatee County to develop a Capital Improvement Plan (CIP) that provides programming and funding of capital projects consistent with the goals, objectives and policies of the Comprehensive Plan and the Future Land Use Map, to maintain adopted level of service standards and to meet other public facility needs not dictated by level of service standards.

The Capital Improvement Plan meets this requirement by providing a planned and programmed approach to utilizing the County's financial resources in the most responsive and efficient manner to meet its infrastructure, equipment and facility needs. The CIP serves as a "blueprint" for the future of the community's growth and development. It highlights the importance of capital maintenance and replacement, so those needs are addressed in a timely and coordinated manner. The CIP provides a basis upon which the impact of new projects on future operating budgets can be determined. It is a dynamic tool, not a static accounting document. Under direction of the Financial Management Department, the CIP outlines an annual budget for the county's capital projects and a plan for the County's capital investments over the next five years. As defined by the Manatee County Comprehensive Plan, capital improvements include physical assets that are constructed or purchased to provide, improve, or replace a public facility, and which are large scale and high in cost. The cost of a capital improvement is generally non-recurring and may require multi-year financing. Physical assets which have been identified as existing or projected needs in the individual Comprehensive Plan elements shall be considered capital improvements. The review and revision of the CIP is consistent with the goals, objectives and policies of the Manatee County Comprehensive Plan.

The CIP differs from the Capital Improvement Element (CIE) of the Comprehensive Plan in that the CIE identifies projects and financing for projects that are required to provide services to areas of the county where growth is occurring, and to maintain levels of services that are required by the Comprehensive Plan. The CIP includes all capital projects, including many that are not related to service levels, such as fixing and maintaining infrastructure, regularly required by the Comprehensive Plan.

The administration of the five-year CIP and the revenue outlook establishes the guidelines for fiscal feasibility for any given project. The CIP identifies revenue sources for each planned project. Those projects for which revenues have not been identified are shown as projects of record. The CIP meets the debt financing policy requirements contained in the County's financial policies and integrates County government projects with state and other local governments when appropriate.

Manatee County's capital planning process begins each November. Departments provide capital project submissions which are reviewed and compiled into the Recommended Budget. In the spring, the Recommended CIP is presented to the Board of County Commissioners in a public work session. After input from the community, the Board considers and adopts the five-year Capital Improvement Plan and a capital budget for the ensuing year is integrated into the annual budget which is adopted after two public hearings. The CIP lists each proposed capital project, the year it will commence, the amount to be spent on the project each year until completion and the proposed sources of funding. Amounts represented in the CIP are estimated project costs and are not intended to serve as precise project budgets. Projects are financed with a combination of utility rate revenues, local gas taxes, impact fees, federal and/or state grants, user fees and general revenues. It is the policy of the Board of County Commissioners that growth pays for itself to the greatest extent possible. The Clerk of Court requires project estimates to be fully funded prior to starting.

The CIP provides adequate time for capital projects to be planned and designed carefully before funding is appropriated and actual construction begins. This process allows professional staff to develop and review the required plans, engineering surveys, and architectural drawings and proceed with purchasing bids and specifications in a timely manner. The lack of a capital plan could result in inefficiencies in service provisions where development exceeds the ability of the government to meet infrastructure needs.

The capital improvement plan serves as a valuable financial tool. It can be used to forecast future capital demands on current revenues. A CIP that includes a forecast of financial resources available for capital purposes will allow public officials and staff to match those requirements. If expected revenues are not

realized, the CIP process enables the county to reassess project priorities and either reduce capital spending in a rational manner or defer certain projects until more funding is available. The ability to amend the capital plan is particularly important when a significant portion of the capital budget is to be financed from current revenues. Implementation of the Capital Improvement Plan serves to enhance the quality of life for both present and future generations of Manatee County.

The FY26-30 Capital Improvement Plan (CIP) reflects $2,936,601,228 of projects with activity within the five-year CIP and $2,481,258,054 of projects already fully appropriated and underway for a total CIP of $5,417,859,282. We have adjusted our CIP to identify two types of categories for our projects which are Governmental and Enterprise projects. To be reflective of the categories with our Infrastructure Sales Tax (IST) Projects, we have further subdivided the CIP projects categories similar to the IST projects. As a result, our CIP is divided into the following:

Governmental

General Government
- Buildings & Renovations
- General Government - Other

General Government - Southwest Tax Increment Finance

Libraries

Natural Resources
- Beaches/Waterways
- Boat Ramps
- Natural Resources
- Parks & Aquatics

Administration

1. Purpose and Intent

This section is established to provide for the applicability and effect of the Five-Year Capital Improvement Plan for the Manatee County Board of County Commissioners, and to set forth specific requirements and procedures related to the revision and update of the Capital Improvement Plan. It is the intent of this resolution that its prescriptive provisions shall be implemented, in part, through the completion of the Capital Improvement projects as described herein.

2. Applicability

The Five-Year Capital Improvement Plan shall apply to capital improvement and capital maintenance projects undertaken by the County of Manatee, Florida. For the purposes of this section, the term "capital improvement project" shall mean a non-recurring expenditure of $250,000 or more from County funds for the construction, installation, or acquisition of capital facilities, or the acquisition of interests in land.

3. Review and Revision

Each year the Five-Year Capital Improvement Plan shall be updated by resolution of the Board of County Commissioners. Such review and revision of the Capital Improvement Plan shall be consistent with the goals, objectives, and policies of the Manatee County Comprehensive Plan.

4. Consistency of Governmental Development

A. For the purpose of the consistency requirement of the plan, the first year of the Five-Year Capital Improvement Plan shall apply to all capital improvement projects undertaken by the County of Manatee for which funds were or will be appropriated in Fiscal Year 2026, except as provided in paragraph D of Section 5 Administrative Provisions, or in a prior year, if the project has not been started as of October 1, 2025.

B. Year two of the Five-Year Capital Improvement Plan shall apply to all capital improvement projects for which funds will be appropriated in Fiscal Year 2027. Projects for year two are subject to availability

of funds and subsequent appropriation of funds by the Board of County Commissioners.

C. Years three through five of the Five-Year Capital Improvement Plan shall represent general County policy with respect to capital improvement programming, subject to review and revision on a case by case basis during each of the succeeding budget years, and subject to availability of funds.

D. Notwithstanding Paragraphs A, B, and C above, the County of Manatee may undertake other capital improvement projects not shown in the Five-Year Capital Improvement Plan as follows:

(1) Emergencies - Such projects found by the Board of County Commissioners to be of an emergency nature may be undertaken without amendment to the plan.

(2) Other Projects - Or, if not so found to be of an emergency in nature, such projects deemed by the Manatee County Board of County Commissioners to be of higher priority than capital projects shown in the CIP may be undertaken, providing the plan is amended by resolution of the Board of County Commissioners. Budget Amendment resolutions which identify such high priority projects as additions or changes to the CIP may serve as the required resolution to amend the plan. Provided, however, that in all cases, such projects shall be otherwise consistent with the prescriptive provisions of the Plan.

5. Administrative Provisions

A. Capital improvements shall be deemed consistent with the Capital Improvement Plan where they are consistent as to general location, scale and type of facility as provided in the CIP project description, although it need not be consistent in revenue sources or manner of operation.

B. If funding for a project identified in the CIP as a future year project or a project of record becomes available in advance of the year for which it is planned, the Board of County Commissioners may

proceed to implement that project when funding becomes available without an amendment to the Plan.

C. Amounts shown in the CIP as estimated project costs are estimates and not intended to serve as precise project budgets. This also applies to initial appropriations for the capital projects. A precise project budget will be established for a project upon completion of the following:

(1) Engineering and architectural plans and specifications upon which the project cost will be estimated.

(2) Adoption of budget amendments subsequent to completion of plans and specifications that may be necessary to properly fund the project.

D. Budgets for projects shall be adopted by the Board of County Commissioners as provided in Resolution R-94-270 which establishes the Manatee County Budget Administration and Implementation Policy. Budget Administration Procedures as provided for under Resolution R-94-270 allow the Budget Officer or his designee to authorize the Purchasing Division to encumber items which require exception to the level of budget control established in the Budget Administration Procedures. This authorization can be given for approved projects, items previously approved for expenditure by the Board of County Commissioners, items required by law, or other expressed priorities of the Board of County Commissioners. Projects included in this CIP and previous CIP's are to be considered "approved projects" for the purpose of encumbering funds in anticipation of a formal budget amendment in order to meet significant time constraints or provide for improved fiscal resource management.

E. To the maximum extent possible, engineering and architectural plans and specifications prepared for roadway projects contained in the Capital Improvement Plan will incorporate landscaping, pedestrian/bicycle facilities and other aesthetic design considerations that enhance the image of

the community and reduce the impacts to adjacent land uses.

F. This Five-Year Capital Improvement Plan is prepared to be consistent with the Capital Improvement Element of the Comprehensive Plan subject to any proposed amendments to the plan presented to the Board of County Commissioners. If any provisions of this resolution are not consistent with the Comprehensive Plan, then the Comprehensive Plan shall prevail over any provisions of this resolution. Projects in the Five-Year Capital Improvement Element of the Comprehensive Plan may require subsequent adoption of ordinances and/or amendments to the Comprehensive Plan before the projects can be initiated.

G. Debt service for projects funded from the proceeds of Transportation Revenue and Refunding Bonds may be paid from Transportation Impact Fee Revenues if all applicable impact fee requirements are met.

6. Funding Sources

A. It is the intent of the Board of County Commissioners that any project included in this plan may be financed and refinanced using bond proceeds. The language in sections 6.B and 6.C below is provided to ensure that the issuance of bonds to finance projects remain as a viable alternative, even if other funding sources are used to initially finance projects.

B. This resolution is an affirmative action of the Board towards the issuance of bonds to finance or refinance the Capital Improvement Plan of the County in accordance with the laws of the State and the applicable provisions of the Internal Revenue Code of 1986, as amended and the rules and regulations of the Internal Revenue Service applicable thereto.

C. Whereby, it is hereby authorized to be issued and this Board hereby determines to issue, to the extent necessary to provide financing for projects identified herein, or refinancing for such projects funded from other sources, its general obligation

and revenue bonds pursuant to the laws of the State of Florida and, if required by the laws of the state, or the Constitution, a referendum vote on such general obligation bonds, for the capital improvements described in “Exhibit B” hereto in the Five-Year Capital Improvement Plan in one or more series and issues in aggregate principal amount of up to $5,417,859,282. The authority established herein shall be implemented by subsequent resolutions of the Board of County Commissioners.

***These figures reflect FY26-30 and future, budget is not included in these calculations.**

In the FY26 Governmental Capital Improvement Plan (CIP), projects total $188,016,156, with $50,008,246 funded by Infrastructure Sales Tax (IST). The Governmental FY26-30 CIP amounts to $920,039,067, representing 31.33% of the total CIP.

Noteworthy highlights in the governmental section of the CIP consist of the following:

General Government category projects receive $7,283,551 funding within the FY26-30 CIP, comprising 0.25% of the total projects.

Featured General Government Projects:

- **Tri-Net Building Purchase/Remodel:**
  - Current Funding: $34,832,903
- **Convention Center Multipurpose room:**
  - Current Funding: $38,076,402
- **Public Works Central Stores Warehouse:**
  - Current Funding: $182,875
  - FY27 Funding: $2,610,411
- **Technology Tech Refresh Data Center:**
  - FY26 Funding: $600,000
  - FY27 Funding: $1,000,000
  - FY28 Funding: $2,000,000
  - Future Funding: $900,000
  - Total Funding: $4,500,000

Sports and Leisure Services projects receive $21,278,909 in FY26. The remaining funding of $15,275,847 is allocated for projects throughout the plan, with $2,828,522 funded by Infrastructure Sales Tax funds.

Featured Sports and Leisure Services Projects:

- **Blackstone Park Upgrades:**
  - FY26 Funding: $864,900
  - Future Funding: $4,230,000
  - Total Funding: $5,094,900
- **Braden River Park - 3 Synthetic Turf Fields:**
  - Current Funding: $599,569
  - FY26 Funding: $5,396,119
  - Total Funding: $5,995,688
- **Country Club East Park Improvements:**
  - Current Funding: $650,000
  - FY26 Funding: $5,992,322
  - Total Funding: $6,642,322
- **Lincoln Park Synthetic Turf:**
  - Current Funding: $199,856
  - FY26 Funding: $1,798,707
  - Total Funding: $1,998,563
- **Premier Sports Complex – Pickleball/Racket Center:**
  - Total Funding: $26,752,371
- **Premier Sports Complex Two Synthetic Turf Fields:**
  - Total Funding: $4,548,375

Natural Resources projects receive $5,279,387 in FY26. The remaining funding of $24,733,513 is allocated for projects throughout the plan, with $3,180,494 funded by Infrastructure Sales Tax funds.

Featured Natural Resources Projects:

- **Rye Preserve Tent Camping Loop and Kayak Launch Projects:**
  - Current Funding: $424,000
  - FY26-30 Planned Funding: $1,569,500
- **Cortez Marina Boat Ramp:**
  - Current Funding: $2,849,025
- **Washington Park Phase II:**
  - Current Funding: $4,526,772
  - FY26-30 Planned Funding: $600,000
  - Total Funding: $5,126,772
- **Rye Preserve Scenic Trail & Amenities Improvement:**
  - Current Funding: $3,497,700
  - FY26-30 Planned Funding: $550,000
  - Total Funding: $4,047,700

Public Safety projects receive $42,368,11 in FY26. The remaining funding of $81,170,069 is allocated for projects throughout the plan, with $10,128,574 funded by Infrastructure Sales Tax funds.

Featured Public Safety Projects:

- **Bishop Animal Shelter – Phase I & II:**
  - Current Funding: $14,883,619
- **Emergency Medical Services Logistics Facility:**
  - Current Funding: $4,318,040
- **MCSO – Fleet Facility:**
  - Current Funding: $25,355,735
- **Animal Community Center Building**
  - Current Funding: $2,598,688

Transportation projects receive $112,310,546 in FY26. The remaining funding of $595,317,488 is allocated for projects throughout the plan, with $202,501,770 funded by Infrastructure Sales Tax funds.

Featured Road Improvement Projects:

- **63rd Avenue East from US 301 to Tuttle:**
  - Current Funding: $31,324,279
  - FY26-30 Planned Funding: $34,308,768
- **75th Street West from 20th Avenue West to Manatee Avenue West:**
  - Current Funding: $40,544,520
- **Canal Road Corridor (US 301- US 41):**
  - Current Funding: $23,708,469
  - FY26-30 Planned Funding: $25,508,225
- **Lena Road from SR 70 to SR 64:**
  - Current Funding: $16,872,216
  - FY26-30 Planned Funding: $15,000,000
- **Lorraine Road from SR 64 to 59th Avenue East:**
  - Current Funding: $11,201,773
  - Future Funding: $74,093,993
- **Moccasin Wallow Corridor:**
  - Current Funding: $152,822,120
- **Upper Manatee River Road North of SR 64 to Fort Hamer Bridge:**
  - Current Funding: $53,894,068
  - Future Funding: $11,510,906

Featured Intersection Projects:

- **60th Ave E (Buffalo Rd) - 69th St E:**
  - Current Funding: $4,267,583
- **CR 675 at Rye Road and North Rye Road Extension:**
  - Current Funding: $2,435,186
  - FY26-30 Planned Funding: $11,283,536
- **Harrison Ranch Blvd at US 301:**
  - Current Funding: $2,522,853
  - FY26-30 Planned Funding: $10,618,238

Featured Sidewalk Projects:

- **26th Street West from Cortez Road to 21st Ave West:**
  - Current Funding: $528,000
- **26th Ave East near 15th Street East Railroad Crossing:**
  - Current Funding: $565,200
- **59th St W - Manatee Ave W - 6th Ave NW:**
  - Current Funding: $58,950
  - FY26-30 Planned Funding: $334,050
- **Buffalo Road Sidewalk - Imperial Cir to Bobby Jones Ct:**
  - Current Funding: $1,211,355
- **Moccasin Wallow Road – Gillet Drive to Buffalo Road:**
  - Current Funding: $725,255
- **Morgan Johnson Road 13th Ave East Amberly Drive:**
  - Current Funding: $94,627
  - FY26-30 Planned Funding: $489,185
- **Palma Sola from 34th Ave W to 27th Ave W:**
  - Current Funding: $522,000

MANATEE COUNTY GOVERNMENT
Capital Improvement Plan
FY2026 - FY2030

Category: General Government
Project Title: Chiller 3 at District Cooling Plant
Department: Property Management
Project Mgr: Aaron Rawley
Infra. Sales Tax: -
Project #: PJ6005240

Subcategory: Building and Renovations
Status: Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes
Project Need: Growth

Project Location

District 4 323 9th Street West, Bradenton

Description and Scope

To design engineer and install a new chiller/cooling tower to provide chilled water air conditioning redundancy and expansion of existing and future buildings in the area.

Rationale

The Central Energy Plant (CEP) is located at 323 9th Street West currently has one open bay for a future 500 chiller and cooling tower. The addition of a new chiller will allow for redundancy of the current existing chillers installed in 2013 beginning their end-of-life cycle. This chiller plant services several locations in the downtown government campus, such as the Central Library, Property Appraiser Office, City of Bradenton parking garage storefront, Admin building, and future 920 Manatee Ave building storefronts.

Project Location

District 2 605 39 th St E, Palmetto

Description and Scope

Construct a 4,000 -5,000 sq ft Community Center at Washington Park that would give residents the area for the opportunity for fellowship and support at the park.

Rationale

Washington park area residents do not have a facility where they can gather in large groups for celebrations, learning activities and after school activities.

Project Title: New County Parking Garage
Department: Property Management
Project Mgr: Tom Yarger
Infra. Sales Tax: -
Project #: PJ6069902
Status: Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: -
Project Need: Maintenance, Deficiency

Project Location

District 3 1112 Manatee Ave W., Bradenton

Description and Scope

To raze and construct a new county parking garage that is larger and more efficient for both the public and county employees. There will be a developed Maintenance of Traffic (MOT) prior to demolition and parking spaces will be located for all displaced users that park daily in the facility.

Rationale

The County parking garage is showing signs of deterioration due to aging and continuous water intrusion. Property Management engaged a professional engineer to perform a complete inspection for the entire structure. The inspection report confirmed there are massive areas requiring repair within the next 18 to 24 months. The estimate to perform only repairs to the aged facility is in excess of $8 million. Property Management suggests to not perform repairs to the structure, but rather raze the entire facility and construct a larger more efficient parking garage for county employees and the general public.

Project #:	PJ6093308	**Status:**	Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: - Project Need: Deficiency

Project Location

District 5 5895 Post Blvd, Bradenton

Description and Scope

To construct a pre-engineered building with cement pad to store and protect all the new maintenance equipment purchased since the Premier property acquisition.

Rationale

Since the County has owned the Premier property, several high-end grounds maintenance apparatuses have been purchased. However, there does not exist a facility to store the new equipment or any other maintenance equipment required to maintain the athletic fields and grounds. Not having an enclosed maintenance building accelerates the equipment's age and performance.

Project Title: Premier Generator Installation
Department: Property Management
Project Mgr: Jeff Anthony
Infra. Sales Tax: -
Project #: PJ6093312
Status: Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: -
Project Need: Deficiency

Project Location

District 5 5895 Post Blvd, Bradenton

Description and Scope

To install the previously purchased generator for permanent generator functionality. Installation includes all applicable requirements for functionality for a secondary power supply including but not limited to fuel pump, electrical switch gear, other related electrical components and other appurtenances.

Rationale

The generator was purchased with Cares Act grant funding, but was not installed due to time frame eligibility with the Cares Act deadline. This project is to only install the previously purchased generator at Premier.

Department: General Governmental
Project Mgr: Tom Yarger
Infra. Sales Tax: -
Project #: PJ6103051 **Status:** Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: Yes Project Need: Other

Project Location

District 2 1003 63rd Ave E, Bradenton

Description and Scope

Design and engineer the renovation of the recently purchased VMA building to make it a fully functional office facility for Community and Veteran's Services staff. This includes approximately 17-20 offices (offices for leadership and staff dealing with HIPAA regulations), 30 office space/cubicles, a break room, multiple conference rooms that could convert to a multipurpose space all with IT functionality and screens, functional lobby with safety features and a collaborative space. Other considerations include IT infrastructure, security cameras, FF&E, and other appurtenances required for a fully functional office space.

Rationale

The current Community & Veterans Services (CVS) offices are situated on the 5th floor of the Manatee County Administration building, accommodating approximately 50 employees. The divisions housed on the 5th floor include Aging Services, Neighborhood Services, Children Services, Housing and Community Development, Criminal Justice, Homeless Policy Coordinator, 10 Fiscal Management staff, the CVS Director and 2 Deputy Directors. The move aims to address special inefficiencies, enhance privacy and security compliance with HIPAA regulations, and accommodate expansion needs including additional services for Probation and Veterans Services. The move and build out would render the proposed renovations on the 5th floor, aimed at expanding office space and enhancing security, unnecessary, thereby saving the county significant resources and disruption. The new location should provide easy of access for the public and employees, with consideration for parking, public transportation access, and central positioning relative to the community it serves.

This move would align with our commitment to ensuring that our services are readily available to members of the community. The offsite location provides for an opportunity to design a purpose-built facility tailed to the specific needs of the department and its staff.

Project Title: Public Works Central Stores Warehouse
Department: Public Works
Project Mgr: Aaron Rawley
Infra. Sales Tax: -
Project #: PJ6106503
Status: Existing

Comprehensive Plan Information

CIE Project: No
LOS/Concurrency: No
Project Need: Deficiency

Project Location

District 1 1707 Lena Rd, Bradenton

Description and Scope

A project for a new PW Central Stores Warehouse facility is requested and will be constructed on the Musgrave Property. The project will include a 10,000 square foot Central Stores/Surplus Warehouse facility for county-wide logistics and asset management. It will also include a loading dock, parking, security measures, hurricane hardened, a generator disconnect, offices, and storage areas. This facility will enhance efficiency and sustainability while ensuring the County can meet increasing demands for operational support in the
years ahead.

Rationale

The recent loss of the PW Central Stores Surplus Warehouse due to fire has created an urgent need for a replacement facility to maintain critical county logistics. The centrally located Musgrave property at Lena Road provides an ideal location for
consolidated or individual facilites, streamlining operations, improving efficiency, and enhancing security. A potential second-phase footprint for future expansion of facilities will ensure the county is prepared for future growth, safeguarding both public safety and
government resources.

Project #: PJ6106504
Status: Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: No
Project Need: Deficiency

Project Location

District 5 SR 64 at Lena Road, Bradenton

Description and Scope

Planning and design of a modernized fleet maintenance facility with administration offices, break room, training space, and storm-rated sheltering capabilities at the County-owned property along Lena Road near the County's landfill.

Rationale

This project involves planning and designing a new Fleet Maintenance Facility and Administration Offices to replace the outdated structure at 1100 26th Ave E, Bradenton, FL.
The new facility will be on County-owned land near Lena Rd. The current 1950s building is in poor condition, with failing systems and outdated equipment, posing safety and operational risks. It lacks essential features like storm protection and space for modern fleet needs. Replacing it will ensure continued support for vital county services, enhance efficiency, and provide resilience during emergencies.

Subcategory: Building and Renovations
Status: Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: -
Project Need: Maintenance

Project Location

District 2 201 25th St West, Palmetto

Description and Scope

Manatee County Neighborhood Services Department administers an Indigent Burial program. Part of this program entails paying for the cremation of those who have deceased and have no family/friends etc. to claim the body, make arrangements, and burying ashes at the New Memphis Cemetery. There is not enough room to continue this practice and there is a need to create a scatter garden which will solve this problem and along with it a parking area and wall to list the names of those whose ashes will be scattered there.

Rationale

This project will confirm the location of remains. Replacing the markers/plots will allow for families to easily locate their loved ones remains. The project will involve a survey of the ground to find out where there are burials and replace current plot markers so that they are more visible. Once complete a scatter garden will be developed and a wall built to house names of those scattered along with a parking area. A parking area currently does not exist and the property borders animal services and due to the poor condition of the plot markers, volunteer dog walkers are not aware where they are walking.

Status: Existing

Comprehensive Plan Information

CIE Project: No
LOS/Concurrency: No
Project Need: Other

Project Location

District 1 14494 Harlee Road, Palmetto

Description and Scope

Purchase DJJ building knowing future, substantial renovations/remodeling will be necessary. Anticipated renovations are mechanical, electrical, plumbing, sprinkler/fire changes, general repairs, kitchen repairs, and roof repairs. The Manatee County Sheriff's Office intends to use this facility to house programming staff, add class time for juveniles transported from the main jail allowing more efficiency of time by eliminating the process of separating juveniles from adults, and flexibility for new inmate intake for 14 days for COVID quarantine before main jail induction.

Rationale

On July 7, 1997, Manatee County (County) entered into a ground lease with the State of Florida Department of Juvenile Justice (DJJ) for a 3.5 tract of land located in the Manatee County Jail Complex. Under the terms of the agreement, the DJJ was allowed to construct a facility to house juvenile offenders and staff. The lease required that any facilities constructed by DJJ would be surrendered to County at the end of the lease term. The lease provides a formula to utilize in determining the price County will pay for the facilities if the county terminates the lease and indicates that if the DJJ terminates the lease, the purchase price for the facilities will be negotiated.

Department: Property Management
Project Mgr: Tom Yarger
Infra. Sales Tax: -
Project #: PJ6107000 **Status:** Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: - Project Need: Other

Project Location

District 3 4415 119th St W, Cortez

Description and Scope

To engage a structural engineer to evaluate a comprehensive building structure status. This is required to be completed prior to any type of repair or renovation due to the facilities age and compliance with all National Historic Preservation Society regulations. Depending upon what is delineated within the structural engineer's findings will drive additional costs for the actual repairs. Other pre-liminary evaluation expenses include retaining a roofing vendor to evaluate the roof and it's underlying structure, material testing, geothermal testing and engaging a construction contractor to provide pre-construction costs. Total cost of this project is unknown until actual repair and other construction upgrade costs are determined at a later date after all pre-liminary findings are reviewed.

Rationale

The Florida Maritime Museum has significant roof leaks, damaged bricks, stucco filled weep holes, standing water around building, buckling floors, soft floor joist issues, parapet caps rotted, scupper drains clogged and damaged beyond repair and the high probability of many more construction issues beyond these items. Any renovations must comply with the National Historic Preservation Society.

Project Location

District 3 1112 Manatee Ave W, Bradenton

Description and Scope

It is recommended that a professional assessment of the A/V system equipment, room use and application be performed. This will determine an overall solution to meet the immediate and future needs of the County to provide the best user experience for all participants and attendees. Phase 1: Engage a consultant to perform a professional assessment of the existing A/V system equipment and room use. This consultant, working with County staff, will determine an overall design to meet the immediate and future needs of the County to provide the best user experience for all participants and attendees.

Rationale

The primary use of the Pat M. Glass County Commission Chambers is to host Board of County Commission Meetings and other public meetings. The current audio/visual system is comprised of microphones, speakers, televisions, cameras, production equipment and control panels, with most components being in excess of 15 years old. The majority of the equipment is at manufacturer end of life and support. The system has reached maximum capacity in regard to audio and video inputs and outputs. Any changes that are required, such as adding a remote virtual attendee, comes at a sacrifice of another device or function. The system is prone to malfunction and requires constant oversight by the production vendor for meeting support.

Project #: PJ6111900
Status: Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: -
Project Need: Other

Project Location

District 2 1 Haben Blvd, Palmetto

Description and Scope

With a convention center headquarters' hotel under construction, the following improvements and enhancements to the existing Convention Center are needed. An approx. 15,000 sq. ft. mutli-purpose room added to the southeast side of the Convention Center (project 6111901), air conditioned corridor connecting the hotel to convention center, renovation of existing parking lot to include a landscape plan and Parking Deck that would accommodate approximately 100 cars.

Rationale

The convention center opened in January 1985 and was renovated in 2011 at a cost of $6.5 million paid in full by the Tourist Development Tax. With a convention center hotel in construction adjacent to the facility, it is recommended to expand the current convention center by adding approx. 15,000 sq. ft. multi-purpose room (Project 6111901), an air conditioned connector corridor to the hotel, and a 100 vehicle parking deck. Aside from the expansion items, we also recommend interior/exterior improvements to the existing convention center, and the renovation of the existing parking lot that includes a landscape plan. This recommended expansion program would allow us to leverage in small conferences and conventions that would generate approximately $20 million in economic impact annually that would allow us to fully diversify our branding in the marketplace. Without the expansion model of the convention center, the CVB would not have the amenities to attract small conferences/conventions, even though we will have a full-service adjacent hotel open for business.

Description and Scope

To install the previously purchased generator for permanent generator functionality. The imperative equipment at the Medical Examiner facility remains operable. Manatee County will install the generator to connection to an already existent transfer switch. Installation includes stormwater modifications to site and all applicable requirements for functionality for a secondary power supply including but not limited to fuel pump, electrical switch gear and other related electrical components.

Rationale

The generators were purchased with Cares Act grant funding, but were not installed due to time frame eligibility with the Cares Act deadline. This project is to only install the previously purchased generator to the morgue.

FY2026 - FY2030

Category: General Government
Subcategory: Building and Renovations
Project Title: Generator Install at Supervisor of Elections
Department: Property Management
Project Mgr: Jeff Anthony
Infra. Sales Tax: -
Project #: PJ6113402
Status: Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: -
Project Need: Deficiency

Project Location

District 2 600 US 301 Blvd, Bradenton

Description and Scope

To install the previously purchased generator for permanent generator functionality. The imperative equipment at the Supervisor of Election facility remains operable. Manatee County will install the generator to connection to an already existent transfer switch. Installation includes all applicable requirements for functionality for a secondary power supply including but not limited to fuel pump, electrical switch gear and other related electrical components.

Rationale

The generators were purchased with Cares Act grant funding, but were not installed due to time frame eligibility with the Cares Act deadline. This project is to only install the previously purchased generator at the Supervisor of Elections.

Project #: PJ6119001
Status: Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes
Project Need: -

Project Location

District 4 407 57th Avenue East, Bradenton

Description and Scope

Renovating an existing facility into a 33+ room temporary family homeless shelter will require a range of services to ensure the facility is safe, comfortable, and functional for families in need. The scope of services will need to be carefully planned and coordinated to ensure that the project is completed successfully, and will include:
Architectural phased design for renovation to create living spaces, evaluation of facility for hurricane preparedness and resiliency, common areas, and support facilities such as kitchens, bathrooms, and laundry facilities, including demolition, framing, electrical and plumbing work, HVAC, fire protection, site lighting, and security. The design and construction will also include all other appurtenances required for a fully functional ADA-compliant facility.

Rationale

Manatee County is committing to creating solutions to the homeless issues affecting our communities. Renovation of existing facilities to house homeless families can be a cost-effective solution to addressing the issue, providing a safe and secure living environment, and creating opportunities for community involvement and collaboration towards a common goal of ending homelessness. Shelters can also serve as part of a larger strategy to end homelessness. By providing temporary shelter, families can get back on their feet and transition into more permanent housing.

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: - Project Need: -

Project Location

District 5 9000 Town Center Parkway, Lakewood Ranch

Description and Scope

Acquire the Tri-Net building located at 9000 Town Center Parkway and perform renovations/improvements to ensure full office functionality. The scope includes, but not limited to: interior renovations such as upgrades to first and second-floor layouts to enhance operational efficiency, IT networking and security access control enhancements, installation of FF&E; building systems and maintenance (generator, HVAC, lighting upgrades) exterior parking and building improvements. Includes all appurtenances for a fully functional facility.

Rationale

The acquisition of the Tri-Net building at 9000 Town Center Parkway provides a strategic opportunity to secure a permanent facility that meets the County's operational needs. This location offers the necessary infrastructure to support current and future County services while optimizing efficiency, accessibility, and long-term cost savings. The purchase aligns with the County's commitment to maintaining a well-equipped and secure facility that supports essential functions.

Project Location

District 2 2525 27th St E, Bradenton

Description and Scope

The land needs to be acquired (39.06 total acres) in order to utilize land to create community garden and fruit forest for educational purposes and public use with opportunity for athletic fields. Hire necessary staff to operate.

Rationale

Manatee County Library system is under built. With the purchase of the Mixon Property, 39.06 total acres, there is opportunity to create a library space utilizing 6 acres and public facility for services. Allow the opportunity of athletic fields if capable. There is also opportunity to create a community garden and agricultural education area and museum.

Infra. Sales Tax: -
Project #: PJ6093314
Status: Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes
Project Need: Growth

Project Location

District 5 895 Post Blvd, Bradenton

Description and Scope

This project would include the design and construction of the entrance boulevard connection of Premier Boulevard to Rangeland and all associated earthwork and underground utilities.

Rationale

During the design phase of the Premier MCSO Substation, approximately $1.2M was identified for necessary earthwork, utilities and the construction of the entrance road, connecting Rangeland to the entrance Boulevard. This road will be shared by all new facilities being built at Premier including the Library, Pickleball, Aquatics Center, etc. Therefore, this project should be separated from the MCSO Substation project. These two individual projects would be started and completed at the same time to allow for a better allocation of resources, not just supervision and management but site preparation and utility services to the project site.

Project #: PJ6107400
Status: Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: -
Project Need: Other

Project Location

District 1 3105 Buckeye Road, Palmetto

Description and Scope

Construction of a Class I industrial injection well (+/- 3200 ft. bls) to dispose of remnant process wastewater at the former Piney Point phosphate facility. Includes permitting, design, and construction of the well, associated monitoring well(s), piping, valves, flow meter, Supervisory Control and Data Acquisition (SCADA) telemetry, pretreatment system, and other required appurtenances.

Rationale

The Florida Department of Environmental Protection (FDEP) has requested Manatee County to design, permit, construct and ultimately operate the well for the disposal of the remnant process wastewater at the Piney Point site. FDEP has agreed to fund the majority of the costs to do so. This well will provide a long term plan for disposing of the millions of gallons of wastewater currently stored in the phosphogypsum stacks and the 30-50 years of seepage that will continue after stack closure.

Description and Scope

Construction of a pretreatment facility to operate in tandem with the Class I industrial injection well currently under construction for the treatment and disposal of remnant process wastewater at the former Piney Point phosphate facility. Includes permitting, design, and construction of the facility, including open top tanks, enclosed building, electrical gear, pumps, piping, controls, covered chemical storage tanks and other required appurtenances.

Rationale

The Florida Department of Environmental Protection has requested Manatee County to design, permit, construct and ultimately operate the well for the disposal of the remnant process wastewater at the Piney Point site. FDEP has agreed to fund a majority of the costs to do so. This facility in tandem with the deep injection well will provide a long term plan for disposing of the millions of gallons of wastewater currently stored in the phosphogypsum stacks and the 30-50 years of seepage that will continue after stack closure.

Project Title: Manatee County Central Jail Dog Kennel - Sandbag/Storage Building
Department: Community and Veterans Service
Project Mgr: Tom Yarger
Infra. Sales Tax: No
Project #: PJ6118101 **Status:** Existing

Comprehensive Plan Information

CIE Project: No
LOS/Concurrency: No Project Need: Deficiency

Project Location

District 1 14470 Harlee Road, Palmetto

Description and Scope

Manatee County will install two prefabricated 16-kennel buildings, a prefabricated storage/sandbag building, and an air-conditioned storage facility to include concrete slab, utilities, site work, roadway improvements, fill placement and potential stormwater facilities and all appurtenances required for a functional facility. This project is for the prefabricated storage/sandbag building.

Rationale

Due to dog overcrowding at Manatee County's Palmetto Animal Shelter, a new supplemental kennel for the large dogs needs to be built. With the help of the Manatee County Sherriff's Central Jail team, the Animal Welfare Division would like to build two 16- dog kennels at this site, along with a storage facility to house chemicals and sandbags, and an air-conditioned storage facility for dog medicines and food. Dogs will be cared for by the inmates, and this will help with the inmate's rehabilitation.

Project Title: Manatee County Central Jail Dog Kennel - Storage Building
Department: Community and Veterans Service
Project Mgr: Tom Yarger
Infra. Sales Tax: -
Project #: PJ6118102 **Status:** Existing

Comprehensive Plan Information

CIE Project: No
LOS/Concurrency: No Project Need: Deficiency

Project Location

District 1 14470 Harlee Road, Palmetto,

Description and Scope

Manatee County will install two prefabricated 16-kennel buildings, a prefabricated storage/sandbag building, and an air-conditioned storage facility to include concrete slab, utilities, site work, roadway improvements, fill placement and potential stormwater facilities and all appurtenances required for a functional facility. This project is for the air-conditioned storage facility.

Rationale

Due to dog overcrowding at Manatee County's Palmetto Animal Shelter, a new supplemental kennel for the large dogs needs to be built. With the help of the Manatee County Sherriff's Central Jail team, the Animal Welfare Division would like to build two 16-dog kennels at this site, along with a storage facility to house chemicals and sandbags, and an air-conditioned storage facility for dog medicines and food. Dogs will be cared for by the inmates, and this will help with the inmate's rehabilitation.

Project Title: Veterans Memorial Park
Department: Community and Veterans Service
Project Mgr: Tom Yarger
Infra. Sales Tax: -
Project #: PJ6118800
Status: Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes
Project Need: Growth

Project Location

District 1 5431 Buckeye Rd, Palmetto

Description and Scope

The architectural design of site and civil work for a memorial veterans park which will determine a phasing structure to complete this project over a number of years. This project will include War Memorials to commemorate veterans who have fought in conflicts and wars. These memorials can include statues, plaques, or other installations. Additionally, a visiting center, pavilions, and infrastructure will be designed as a central gathering point for events and activities and will include storm-water facilities and basic infrastructure such as sidewalks, paths, site lighting, restrooms, and parking facilities. Additional amenities to be considered may include outdoor recreational facilities such as walking trails and picnic areas to provide a space for veterans to come and enjoy the outdoors; and all other appurtenances required for a functional facility.

Rationale

Building a Veterans Memorial Park is important as it provides a space where the memory and contributions of veterans can be honored and preserved. It is also a way to recognize the sacrifices of those who served and to educate the younger generations about the importance of serving and defending the country. Additionally, a Memorial Veterans Park can also be a place where veterans can come together, share and connect with each other, and receive support and assistance if needed.

Category: General Government **Subcategory:** -
Project Title: Technology Tech Refresh - Data Center
Department: Information Technology
Project Mgr: -
Infra. Sales Tax: -
Project #: PJTP26038 **Status:** Requested

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: - Project Need: Maintenance, Growth

Project Location

Countywide 1112 Manatee Ave, 7th Floor, Bradenton

Description and Scope

Upgrade core County technology platforms including compute, storage, security and communications infrastructure. Implement, integrate, and validate replacement hardware Migrate users and services to the new infrastructure.

Rationale

In order to provide reliability, performance, capacity and current features, this project will replace technology equipment that has reached its end of useful life, This technology refresh needs to be performed proactively and regularly. Over the past few year, many updates and upgrades have occurred and produced a more dependable system. This is due to the technology refresh program instituted a few years ago. This is the schedule for replacing components in MC data center:
Servers - every 3 to 5 years
Storage - every 4 to 6 years
Security - every 4 to 5 years.
FY26 - Start-up Funding $600,000
To begin research, design phase and gather quotes for equipment and supplies needed for the project.
FY27 - Costs: $3,000,000
To enable IT to purchase the converged Data Center Infrastructure which is a high performance, scalable platform for IT services. This combines servers and storage equipment to ensure performance that meets the needs of the enterprise and all customers who rely upon this comprehensive system. This infrastructure currently runs over 700 virtual servers and provides hundreds of terabytes of storage. It supports critical enterprise functions including the financial system (OneSolution) and document management system (OnBase) that are used throughout the county, as well as line-of-business systems for every department including Utilities, Public Works, and Public Safety. This system also provides the ability to copy all data between two data centers in order to minimize business impact from a failure or disaster. The current system was purchased in FY 2022, so this replacement is at the end of the replacement cycle for this infrastructure.
FY28 - Costs: $900,000
To enable IT to acquire the Unified Communication infrastructure. The VoIP telephone system requires similar replacement schedule when considering the hardware component. There are approximately 50 units or servers that are acquired by a single purchase and does not account for any replacement of the handsets or phone that are placed upon the desk or in an office. The servers are the behind the scenes hardware that support the connectivity throughout the county. This replacement is at the seventh year after purchase and will help ensure the system remains reliable and meets the performance needs of our customers.

Project #: PJ6028803 **Status:** Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes Project Need: Deficiency

Project Location

Multi-district 301 Blvd E at US 41, Bradenton

Description and Scope

Evaluate, survey, design, permit, and construct stormwater and water quality storage facilities at applicable County-owned properties to allow preemptive stage drawdown of existing stormwater facilities in advance of a forecasted storm/flood event. Improvements to include modification of existing facilities, new improvements, and automated out outfall structures. Scope to include geotechnical explorations and a Environmental Site Assessments (ESA). Phasing the project is to be considered. Excavated material is to be utilized, where applicable, for County benefit allowed by the ESA. Material is to be hauled to receiving stockpile facility or to a capital improvement project in need of fill material.

Rationale

DeSoto Square Mall's parking lot, residential and commercial properties along 9th Street Extension, 9th Street West, 30th Avenue West, and other local streets in East Branch Cedar Hammock/Wares Creek watershed are prone to flooding from high intensity rainfall or daily rainfall totals exceeding 2-3 inches. This project will utilize existing County-owned properties and stormwater facilities to create additional stormwater/floodplain storage to alleviate flooding.

Project Title: Bowlees Creek Channelization (Lake Brendan to 9th Street East)
Department: Public Works
Project Mgr: Jamarr Norman
Infra. Sales Tax: -
Project #: PJ6106301 **Status:** Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes Project Need: Deficiency

Project Location

District 4 Danny Drive, Sarasota

Description and Scope

Flowline improvements to Bowlees Creek (approximately 0.97 mile) and two tributary systems (from 15th Street East and from Whitfield Avenue) that include: (i) survey and mapping, (ii) channel widening, (iii) installation of two (2) Automated Outfall Structures (AOS), (iv) replace and lower the invert elevation of an existing stormwater outfall pipe that discharges towards 57th Avenue West, (v) provide drainage easements over Bowlees Creek and tributary systems, the stormwater facility within Oakwood Apartments, and the private pond for permitting, construction, inspection, and maintenance of the AOSs, supporting communications, and water quality monitoring equipment, as required.

Rationale

Bowlees Creek Watershed has a history of over-topping its banks and inundation of adjacent properties and roadway thoroughfares. The Shadybrook Condominium and adjacent neighborhoods experienced flooding from the "No Name" flood event of August 2017. The Bowlees Creek Watershed Management Plan (WMP) found a deficit in flood storage is causing the flood inundation. The WMP determined 39.43 to 42.30 acre-feet of additional flood storage, depending upon the draw-down time-frame, could be created between these three existing stormwater facilities. The subsequent Bowlees Creek Feasibility Study determined flood mitigation could be provided within the watershed by means of channel widening and a maintenance dredge to create a uniform flowline slope of Bowlees Creek between Lake Brendan and 9th Street East.

Project #: PJ6115800 **Status:** Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes Project Need: Deficiency

Project Location

District 4 63rd Ave E and 33rd St E, Sarasota

Description and Scope

Survey, design, permit, and construct an approximate 50 ac-ft stormwater and water quality storage facility at 6525 33rd St E (PID 1876210004). Scope to include geotechnical explorations and a Environmental Site Assessment (ESA) for the parcel. Excavated material is to be utilized where applicable for County benefit allowed by the ESA. Excavated material will be hauled to receiving stockpile facility or CIP in need of fill material.

Rationale

The County recently purchased a vacant parcel located at 6525 33rd St E which is adjacent to the Pearce Drain within the Pearce Drain Watershed, which historically is prone to flooding. The parcel has been identified as a proposed regional flood mitigation facility from a recently completed Pearce Drain Watershed Management Plan. The parcel will provide additional flood volume storage and water quality treatment to the watershed. Additionally, the excavated soil material may be able to be utilized for ongoing Capital Improvement Plan (CIP) projects, landfill cover material, or elsewhere in the County. The property is located within the Southwest Tax Increment Financing District (SWTIF).

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes Project Need: Deficiency

Project Location

District 4 63rd Ave E and 33rd St E, Sarasota

Description and Scope

Survey, design, permit, and construct an approximate 6 ac-ft stormwater and water quality storage facility at 6209 17th Street East (PID 1843400001). Scope to include geotechnical explorations, Environmental Site Assessment (ESA), topographic survey, and boundary survey for the parcel. Excavated material is to be utilized where applicable for County benefit allowed by the ESA.

Rationale

The County acquired the property located at 6209 17th Street East which experienced repetitive flood losses. The property is located within Bowlees Creek Watershed, which historically is prone to flooding. The general area was identified for a regional flood mitigation facility through the Drainage Improvements Analysis Report included with the Bowlees Creek Watershed Management Plan. The parcel will provide additional flood volume storage and water quality treatment to the watershed. Additionally, the excavated soil material may be able to be utilized for ongoing Capital Improvement Plan (CIP) projects or elsewhere in the County. The property is located within the Southwest Tax Increment Finance District (SWTIF).

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes Project Need: Deficiency

Project Location

District 4 51st Avenue West from 21st Street West to 24th Street West, Bradenton

Description and Scope

This project will consist of upgrades/improvements to the existing stormwater system collection and conveyance system within Holiday Heights, 2nd Addition Subdivision, which ultimately drains into West Branch Cedar Hammock. This project will consist of upsizing existing stormwater pipelines; improvements or replacement of existing grate inlet and curb inlet structures; and, if warranted, the installation of a flap-gate at the outlet into West Branch Cedar Hammock Drain. Acquisition of Drainage Easements as warranted for the upgrades/improvements to the existing stormwater pipelines as necessary. Design and permitting associated with referenced improvements. Water quality Best Management Practices (BMP) to be utilized during construction and incorporated into the stormwater improvements where possible.

Rationale

Maintenance staff repeatedly receives stormwater drainage related service requests in the Holiday Heights community. The area has significant street flooding and some claims of home flooding during extreme rain events. Stormwater Operations has flushed out this stormwater system in the past based upon repeated complaints. The next step is to analyze the drainage system and determine if upsizing the stormwater pipelines, installation of a flap gate and/or inlet improvements would be most effective to improve the system. Note that there is a limit to what can be accomplished without additional storage being created in this system.

Project Title: Palma Sola Boulevard Stormwater Improvement (Senrab Dr)
Department: Public Works
Project Mgr: Jeff Streitmatter
Infra. Sales Tax: -
Project #: PJST02298 **Status:** Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes Project Need: Deficiency

Project Location

District 3 Palma Sola Boulevard/Senrab Drive, Bradenton

Description and Scope

This project will consist of upgrading the existing stormwater system from Senrab Drive west towards Palma Sola Boulevard and ultimately draining into Palma Sola Bay. This project will consist of upsizing existing stormwater pipelines; improvements or replacement of existing grate inlet and curb inlet structures; and, if warranted, the installation of a flap-gate at the outlet into Palma Sola Bay. Acquisition of drainage easements as warranted for the upsize of existing stormwater pipelines as necessary. Design and permitting associated with referenced improvements. Water quality Best Management Practices (BMP) to be utilized during construction and incorporated into the stormwater improvements where possible.

Rationale

This is a flood mitigation project to improve the Level of Service (LOS) for the local roads and reduce flooding on private properties that regularly occurs during typical summer rain events. Additionally, the stormwater system east of Palma Sola Blvd in Senrab Park has reached the end of its life span. Maintenance staff are constantly repairing failing joints, pipe collapses, and blockages due to root intrusion.

Project Title: Pic-Town Stormwater Pipe & Drainage Rehabilitation
Department: Public Works
Project Mgr: Jeff Streitmatter
Infra. Sales Tax: -
Project #: PJST02300 **Status:** Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: Yes Project Need: Maintenance

Project Location

District 4 US 41 at 51st Ave Dr W, Bradenton

Description and Scope

Evaluate, design, permit, and construct approximately 8,500 LF of cure-in-place pipe lining throughout the Pic-Town subdivision. Design to include increasing capacity of existing inlets and providing new inlets to improve stormwater conveyance. Obtain necessary drainage easement needed for the improvements.

Rationale

Pic-Town subdivision was established in the 1950's and since there are no established drainage easements within the community, homes have been placed over storm pipelines. These reinforced concrete storm pipelines are reaching the end of their life span and are experiencing joint failures which poses serious risk to the dwellings above them. Field Maintenance staff recommends cure-in-place pipeline rehabilitation of the entire drainage system to stabilize the structural integrity of the pipelines and extend their life span another 40 to 50 years. Also, increasing inlet structure sizes and adding additional inlets will alleviate street flooding that occur during light to moderate rain events.

Project Mgr: David Arbaelez Montoya
Infra. Sales Tax: -
Project #: PJ6081402
Status: Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes
Project Need: Growth

Project Location

District 1 6750 US 301 N, Ellenton

Description and Scope

One of three Library projects in the Infrastructure Sales Tax (IST), this request is to expand the facility up to 8,000 square feet to the north of the teen and children's area. The expansion is needed to accommodate tremendous growth in the north part of the county. Project elements included; replacement heating, ventilation (Cafe area) and air conditioning (HVAC) systems, a friend's meeting room, youth STEAM lab, exterior windows and doors to allow natural light to enter the building and enhancements to the technology area. The project uses both Library Impact Fees and IST funds.

Rationale

The first Rocky Bluff Library was established in a small 4,570 sq. ft. storefront space in Ellenton. In 2013, the County acquired The Roaring Twenties restaurant out of foreclosure and began renovations to the 10,470 sq. ft. structure. To save cost, surplus shelving from the Historic Court House was repurposed. Library staff & Property Management moved books on rolling carts across the parking lot to the new building. Portions of the old restaurant were preserved and still used in the Library today such as; light fixtures, counter tops, and the old bar which is now the "Storybook Cafe".

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes
Project Need: Growth, Deficiency

Project Location

District 5 5895 Post Blvd, Bradenton

Description and Scope

Phase I to construct a new library facility location East of I-75 which will accommodate the tremendous growth in the East County. Specific library construction elements include ADA required restrooms and parking, study rooms, tutoring rooms, makerspace, meeting space, performative space, life learning space, inspirational space, and staff work area.

Rationale

The newly constructed branch would serve the growing population in the east county from I-75 to Myakka City and the county line. This library would provide library and public facility amenities for residents south of Manatee river and north of the Sarasota Manatee county line.

Project Title: LWR Branch Library 2nd Floor Build-Out
Department: Community and Veterans Service
Project Mgr: Tom Yarger
Infra. Sales Tax: -
Project #: PJ6093315
Status: Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes
Project Need: Growth

Project Location

District 5 16410 Rangeland Pkwy, Lakewood Ranch

Description and Scope

This would be Phase 2 of the construction of the new library facility in the Premier Sports Campus and would also fulfill to promise to house other County services particularly those within CVS as opposed to County functions that do not require in-person visits to access services. Phase 2 would allow for study and tutoring space, conference/meeting rooms, and additional physical collections. The build-out would include office space for Veterans Services counselors and Probation Officers to better serve their growing caseloads, increasing their effectiveness and efficiency. The ease of access, parking, and location in Lakewood Ranch would be beneficial for our veterans that live and work in the expanding Eastern part of the County.

Rationale

The Library System consists of seven public facilities, each open 62 hours a week. With the addition of the newest branch Manatee Library will reach 56% of the space standard set the Florida Department of State, Library Division of .60 sf per 1000 residents of the library service area. This standard is also expressed in the Comprehensive Plan. The Library anticipates the new branch to be the busiest in the library system, due to ongoing and rapid growth. As the new branch occupies the first floor of a two-story building. The second floor was designed to carry the load of library shelving, which is greater than typical build, presenting an opportunity to expand services, including additional collection space, study rooms, and meeting rooms, which is a priority for the local business community.

This also presents an opportunity to move toward a model of including other CVS services in new and remodeled Library locations, as these predominately public-facing programs are well suited for a public-facing building, with ample parking. Probation Services would be able to place three officers, and Veterans Services would be able to staff two counselors on a rotating basis. Estimated additional staff would be 4FTEs for the Library - one Librarian 1 and three Library Assistants.

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes Project Need: Growth

Project Location

Countywide 1301 Barcarrota Ave, Bradenton

Description and Scope

To purchase a specialty vehicle to utilize as a Book Mobile to better serve the citizens of Manatee County with more accessible library services.

Rationale

Manatee County's library services infrastructure is at 56% of state recommended levels. Rapid population growth has underlined the deficiency. This project will add a Book Mobile to existing service delivery methods and practices. The Book Mobile will enable the library staff to provide services to residents living in areas of the County that do not currently have services or cannot readily travel to existing Library locations.

Project Location

District 2 2525 27th St E, Bradenton

Description and Scope

The land needs to be acquired (39.06 total acres) in order to construct facility to full functioning library services (utilizing 6 acres) and public building. Hire necessary staff to operate.

Rationale

Manatee County Library system is under built. With the purchase of the Mixon Property, 39.06 total acres, there is opportunity to create a library space utilizing 6 acres and public facility for services. Allow the opportunity of athletic fields if capable. There is also opportunity to create a community garden and agricultural education area and museum.

Project Location

District 3 (R-12-to R-36) 77th street to approximately 360 feet south of 13th Street South (Anna Maria Island)

Description and Scope

Project scope includes Construction. Following construction, it is anticipated that the permit will require environmental, physical and biological monitoring for three years.

Rationale

The federally-authorized Manatee County Shore Protection Project area extends from about 77th Street in the City of Holmes Beach south of 13th Street South in the City of Bradenton Beach (FDEP R-Monuments R-12 to R-36) and was nourished originally in 1992/1993, again in 2002/2003, 2005/2006, and 2013/2014. Through supplemental federal funding, the Central Beach Nourishment project has been provided $14.3 million, with a 30-year period for cost-share reimbursement, to refill the beach template to the maximum extent possible within that budget. The County intends to place additional sand needed to fully refill the template. The USACE must construct the project on their expedited schedule, currently set for 2019/2020, or risk losing the funding. The project is currently authorized under an existing FDEP permit; however, a request needs to be made for another one-time use of the Passage Key sand source borrow area. Also, construction plans, and specifications need to be prepared for the USACE to advertise the project. Engineering studies are conducted prior to permitting to gain a full understanding of the existing coastal environment and any potential impacts the proposed project may cause. These studies are typically required by the FDEP prior to submitting a funding application.

Project Title: Coquina Beach Nourishment - Passage Key Sand Source
Department: Natural Resources
Project Mgr: Charlie Hunsicker
Infra. Sales Tax: No
Project #: PJ6003417 **Status:** Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: - Project Need: Maintenance

Project Location

District 3 (R-33 to R-41+305) 100 Ft S of Bridge St to N end of Longboat Pass, AMI

Description and Scope

The nourishment project requires construction of renourishment, artificial reef for permit mitigation, and a recreational snorkeling reef. Following construction, it is anticipated that the project will require environmental, physical, and biological monitoring for three years.

Rationale

The Coquina Beach project area which extends from south of Bridge Street to the southern end of Anna Maria Island in the City of Bradenton Beach (reference monuments R-33 to R-41). Manatee County is seeking to obtain permits for the Coquina Beach Nourishment Project and mitigative reef. The permits include the Florida Department of Environmental Protection (FDEP) Joint Coastal Permit (JCP) and U.S. Army Corps of Engineers (USACE) Department of the Army (DA) permit to authorize the renourishment of the Coquina Beach project area using sand from the Passage Key Inlet ebb shoal and the construction of a mitigative artificial reef adjacent to Coquina Beach along with a multi bolder recreation snorkeling reef with in the swim zone of Coquina Beach nearest the County concession building location. At the request of the County, the USACE plans to incorporate the Coquina Beach project into the construction event of the Federal Central Beach project. The intent of combining the projects is to reduce costs by $4M - $5M, eliminating a separate dredge mobilization cost. The County must forward fund both the local and State share of construction costs to the Corps. The State share of 50% is fully reimbursable subject to appropriations from the Florida Legislature, competitively awarded. Monitoring and maintenance costs are not forward funded.

Infra. Sales Tax: -
Project #: PJ6003418
Status: Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: -
Project Need: Maintenance

Project Location

District 3 (R-36 to R-41) 360 Ft S of 13 St to N end of Longboat Pass, AMI

Description and Scope

The project scope includes completion of a feasibility study, planning, design, permitting, construction phase services, and construction. Following construction, it is anticipated that the permit will require environmental, physical and biological monitoring for a period of three years.

Rationale

The Coquina Beach groins are located along Coquina beach (FDEP R-monuments R-36 to R-41) and with 18 groins approximately 100 ft in length. The groins protect the beach fronting Gulf Dr S of 13 St S. The present condition of the existing groins is poor; the structures are degrading and pose a hazard to the beach going community. Manatee County is conducting a feasibility study utilizing numerical modeling to evaluate the effects of rehabilitating, removing and/or replacing the Coquina Beach groins and considering alternative structural stabilization options to assist in reducing erosion on Coquina Beach. The Coquina Beach Structural Alternatives Analysis includes conducting a site visit to document the current condition of the existing groins, a literature and coastal processes review, development and screening of options, preliminary engineering and numerical modeling to evaluate alternatives, and recommendation of the most feasible and effective design for implementation. Once the alternatives have been considered, they will be presented to FDEP for support of the permitting process. Wherein, the final engineering design can be completed with state and federal permitting and construction administration services in support of the project.

Project Title: Longboat Pass Jetty Rehabilitation
Department: Natural Resources
Project Mgr: Charlie Hunsicker
Infra. Sales Tax: -
Project #: PJ6003419
Status: Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: -
Project Need: Maintenance

Project Location

District 3 (R-41+405) the north end of Longboat Pass, AMI

Description and Scope

The project scope includes feasibility, design, permitting and construction. It is anticipated that the permit will require environmental, physical and biological monitoring for a period of three years post construction.

Rationale

The jetty on the north side of Longboat Pass reconstruction is required to implement a long-term solution for sand-tightening the structure. As a result, sand from the south end of AMI at Coquina Beach migrates over the top of and through the structure and contributes to shoaling in the inlet. FDEP's response indicated that since sand tightening of the deteriorating jetty would allow the beach north of the jetty to retain sand and stabilize the beach, this would potentially require less fill volume for Coquina Beach. The County agreed to place a temporary geotextile tube adjacent to the jetty at Longboat Pass, which was subsequently installed in 2012. Since then, annual physical monitoring was performed, and the geotextile tube has proven to be effective in trapping sand and preventing losses through the jetty into Longboat Pass. The geotextile tube has been in place for about five years and is at the end of its design life. The current Longboat Pass feasibility study is intended to expand upon previous effort and provide further engineering analysis in support of a permit application.

Project #: PJ6003420 **Status:** Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: - Project Need: Maintenance

Project Location

District 3 Passage Key, Anna Maria

Description and Scope

The current project is located between reference monuments V-302 to R-1 at the north end of Anna Maria Island. The specific project activities include geotechnical investigations and borrow area design and permitting.

Rationale

The Florida Department of Environmental Protection's (FDEP) is adopting an updated Passage Key Inlet Management Plan (IMP) for Manatee County. Passage Key Inlet is a relatively deep channel north of Anna Maria Island that includes a shallow ebb shoal complex. The ebb shoal has been used as a sediment source for Anna Maria Island Beach Nourishment Projects on multiple occasions over the past decades, most recently for the 2020 Central Beach and Coquina Beach Nourishments.

Comprehensive Plan Information

CIE Project: No
LOS/Concurrency: Yes Project Need: Maintenance

Project Location

District 3 Coquina Beach, Anna Maria Island

Description and Scope

A competitive contract will be secured to place 74,800CY of beach compatible sand obtained from the navigational channel of Longboat Pass and placed onto all of Coquina Beach and roughly 1/2 of Cortez Beach. The project includes the reestablishment of the beach shore profile, dune profile, and revegetation of the dunes. An alternative bid may be included to obtain additional dune plants for coverage of existing dunes within the project area.

Rationale

In 2022 Hurricane Ian and Nicole generated storm surge and wave action that caused beach and dune erosion. Again in 2023 Hurricane Idalia impacted Manatee County causing more beach and dune erosion. Approximately 74,800 CY of beach compatible sand will be dredged from the navigational channel of Longboat Pass and returned to the beach under a FEMA (75%) / FDEP (12.5%) / Manatee County (12.5%) funded partnership. The project will be constructed by a competitively selected contractor in accordance with federal and state procurement requirements.

Project Title: Warner's Bayou Boat Ramp Dock Extension & Shoreline Stabilization
Department: Natural Resources
Project Mgr: Sherri Swanson
Infra. Sales Tax: -
Project #: PJ6071404 **Status:** Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: Yes Project Need: Maintenance

Project Location

District 3 5800 Riverview Boulevard, Bradenton

Description and Scope

This project includes the extension of the northern dock at the boat ramp incorporating a barrier wall to prevent sand deposition into the channel, replacement of sand along the shoreline and planting of native vegetation to stabilize the reconstructed shoreline.

Rationale

The County's Warner's Bayou boat ramp property includes a section of the southern shoreline of the Manatee River. The shoreline has been observed to be eroding and the current is transporting sand east to west towards the Warner's Bayou east navigational channel and boat ramp. This project involves the extension of the northern dock at the boat ramp to include a barrier to sand moving westward and the renourishment and stabilization of the river shoreline using living shoreline components.

Project Need: Growth, Deficiency

Project Location

District 2 1003 63rd Ave E, Bradenton

Description and Scope

Environmental services, demolition, site cleanup in preparation of boat ramp construction, and renovation of onsite boat fueling facility. Construct a new boat ramp with multiple launch lanes, the number to be determined following the completion of a feasibility study and preliminary design.

Rationale

Manatee County purchased the Seafood Shack to provide additional boat launch and retrieval capacity in southwestern Manatee County. The new name of this boat ramp will be Cortez Marina Boat Ramp.

Category: Natural Resources Category
Subcategory: Boat Ramps
Project Title: Skyway Boat Ramp
Department: Natural Resources
Project Mgr: Tom Yarger
Infra. Sales Tax: -
Project #: PJTP25059
Status: Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes
Project Need: Growth

Project Location

District 1 I-275, Skyway Bridge adjacent to Sunshine Skyway Fishing Pier on Manatee County side

Description and Scope

Construct a regional boat ramp on the south side of I-75 adjacent to the sunshine skyway fishing pier. This area requires construction of fill on bay bottom to accommodate up to 200 trailer spaces, 40 additional car spaces and 6 launch lanes. In the feasibility documents and environmental permits the Army Corps has identified the Sunshine Skyway location for placement of dredge material from the planed widening and deepening of the Tampa Bay ship chanel. Staff has worked with the Army Corp project planners to ensure that the dredge spoiled island created by this activity concides with the previously identified county boat ramp location. Because dredge spoil is being depositied at the planned location under "beneficial use" provisisions of the project, this fill placement along with plans and permits are being provided at no cost to Manatee County. In turn Manatee County has agreed to utilize the same fill pad created by the Army Cops atop which to build the planned county boat ramp. County construction costs will include stormwater treatment, sea wall and rip rap break water protection, restrooms and parking/launch pay stations, lighting, utilities, sewer, garbage receptacles, landscaping. Due to the reagional location of this boat ramp, WCIND can participate in all design, permitting, and construction costs associated with the boat ramp. Paid trailer and automobile parking would also be implemented at this location.

Rationale

Manatee County currently has 8 boat ramps which are at capacity during most weekends. We have less trailer parking spots than registered boat users in Manatee County. The need for additional boat ramps to increase capacity is evident based on the high demand in the County. Indeed the shortage was recently heightened by the elimination of 80% of the trailer parking spaces for the city of Palmetto's boat reamp on the Manatee River. Multiple conceptual plans for a boat ramp at the Skyway were developed by Coastal Engineering Consultants Inc. in 2008; however, plans were halted until recently revived.

Category: Natural Resources Category
Subcategory: Parks & Aquatics
Project Title: Hidden Harbor Mitigation Site
Department: Natural Resources
Project Mgr: Sherri Swanson
Infra. Sales Tax: -
Project #: PJ6067407
Status: Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes
Project Need: Growth

Project Location

District 1 1625 Ft Hamer Rd, Parrish

Description and Scope

The first Mitigation Program project proposed on County owned lands is Hidden Harbor Park (HHP). Once the mitigation project is established it would be self-perpetuating, with CIP projects purchasing credits at an established purchase price to sustain the project. The expectation is for the operating-fund to be net-cost-neutral, acting as a revenue source to fund permit compliance and support development of future mitigation sites.

There are two distinct areas associated with the HHP mitigation site, including the “land park” (~ 47 acres) area and the “blue trails” (~ 295 acres) that includes Devil’s Elbow and Twin Rivers at Gamble Creek. The conceptual design for the HHP mitigation site assumes: 1). Earthwork to establish suitable elevations for wetland creation (i.e., tidal marsh, mangroves, freshwater marsh and forested wetlands), 2). Land re-contouring to remove agricultural ditches for wetland re-establishment (i.e., freshwater forested), and 3).Nuisance and exotic vegetation management for wetland enhancement on the eastern parcels of Twin Rivers and Devil's Elbow (tidal marsh, freshwater forested, mangrove).

Rationale

Providing wetland mitigation to advance Manatee County’s Capital Improvement Program (CIP) has presented challenges for controlling project costs and managing project schedules. One challenge has involved state and federal permitting associated with unavoidable impacts to wetlands as a result of infrastructure development. Nearly all CIP transportation projects, including those planned over the next five years, will involve some wetland impact. Projects with wetland impacts require wetland mitigation. The purpose of establishing an in-house Mitigation Program is to better forecast and manage CIP project costs and schedules by helping to alleviate uncertainties associated with purchasing the right type and quantity of mitigation credits (or lack thereof). Manatee County Natural Resources Department (NRD) evaluated opportunities to reduce wetland mitigation costs associated with CIP projects through optimizing the use of County-owned lands with wetland mitigation potential to advance infrastructure development needs. A proforma analysis was prepared for one of the highest ranked sites, e.g., Hidden Harbor Park (HHP).

Infra. Sales Tax: -
Project #: PJ6081102 **Status:** Existing

Comprehensive Plan Information

CIE Project: No
LOS/Concurrency: No Project Need: Maintenance

Project Location

District 3 1206 Alcazar Dr, Bradenton

Description and Scope

Design, permit, and removal of existing seawall and construction of living shoreline.

Rationale

This project consists construction of public use improvements including replacement of a failing section of seawall with a living shoreline at Portosueno Park. A living shoreline will be designed, permitted, and constructed along the northern shore of the boat basin, between the stormwater weir to the east and Palma Sola Boulevard Bridge to the west. The existing seawall is failing in some sections and public access is currently prohibited due to safely concerns. The project also consists of improved native landscaping upslope of the proposed living shoreline and improved user amenities. This will lead to lower long-term maintenance costs, ecological/natural resources improvements and increased sea level rise resilience.

Status: Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes
Project Need: Growth

Project Location

Multi-district SR675/Lake Manatee/SR 70/Sarasota County Line

Description and Scope

Multi-purpose, non-motorized paved trail for pedestrian and equestrian use extending from SR 64 north through Rye Preserve and continuing North along combinations of Rye Rd right of way, FPL utility corridors, and lease agreements with adjoining property owners to connect to SR 62. From SR 62 the proposed trail will travel along a westerly direction following atop Gulf Coat Gas Transmission Pipeline right of way and merging with FPL property extending Nort/ Northwest to intercept a rails with trails project along FPL maintained railroad tracks. This project will be constructed in multiple subphases depending upon availability of funding.

Rationale

Conceptual alignment, design, permitting, and construction of the county Gateway Greenway Trail system, as part of the State Sun Trail and Gulf Coast Multi-County trail alignment. Cross Country recreational trails connecting to the parks and preserves utilizing where available utility corridors, road rights of way, and trail use lease agreements where ever possible is part of the implementation of the County's Trail Master Plan approved by the Board in December 2023.

Comprehensive Plan Information

CIE Project: No
LOS/Concurrency: No Project Need: Maintenance

Project Location

District 3 1704 99th St, Bradenton

Description and Scope

Repair or replace all wood and hardware components of bridges, boardwalks, overlooks, piers, observation tower, and installed shade features (natural or manufactured) at Robinson preserve, as well as replenishing aggregate materials, erosion control features and stabilization plantings and irrigation, along trails used by the public to access approaching these assets to address erosion as needed/identified in annual inspections.

Rationale

Many of the existing boardwalk, bridge, and tower components have deteriorated over time due to weather, salt water, and general wear and tear. The project will address damage identified in annual inspections by replacing these components with an effort to minimize the inconvenience to patrons. Proactive replacement of these components as they approach the end of their useful lifespan will prevent closures due to developing safety issues/failures of critical structural elements.

Project Location

District 1 2649 Rawls Road, Duette

Description and Scope

Ecological restoration and enhancement of approximately 100 acres of wetland and upland areas impacted by historical agricultural uses at Duette Preserve. The project will include removal of ditches and re-grading to restore wetland hydroperiods and restoration of wetland and upland habitats.

Rationale

FDOT is required to provide mitigation for wetland impacts associated with planned interchanges improvements at various intersections. The habitat restoration will benefit water quality and wildlife by greatly improving the ecological value of the habitat.

Project Title: Duette: Lake Manatee Watershed Improvement Phase 2B
Department: Natural Resources
Project Mgr: Alissa Powers
Infra. Sales Tax: -
Project #: PJ6006508 **Status:** Existing

Comprehensive Plan Information

CIE Project: No
LOS/Concurrency: No Project Need: Other

Project Location

District 1 2649 Rawls Road, Duette

Description and Scope

The project will address hydrologic and nonpoint source pollution from a 127-acre contributing basin which discharges agricultural runoff in the North Fork Manatee River. The construction project will include the following design elements: contouring a 1.25-acre treatment wetland with two sediment removal pools, restoring 575 feet of headwater stream segment with five sediment removal pools, sediment removal from 0.44-acre of impacted floodplain swamp, replanting native vegetation, exotic plant removal, post-construction vegetation and wildlife monitoring and community engagement activities. The project objectives align with the TBEP Comprehensive Conservation and Management Plan (CCMP) and the County Comprehensive Plan's watershed protection goal.

Rationale

Duette Preserve was purchased with the primary intent to protect the drinking water supply, the Lake Manatee Reservoir. As part of the active management activities, NRD staff has undertaken several grant-funded hydrologic restoration projects focused on improving water quality and wetland habitats. In 2020, Manatee County received a grant through Restore America's Estuaries (RAE) to fund the design of the Lake Manatee Watershed Improvement Project - Phase 2B. In May 2023, Manatee County was awarded $172,709 for construction of the project (Partial funding). On December 22, 2023, Manatee County was awarded $272,709 from the FDEP Wetlands Restoration and Protection grant fund for construction.

Project #: PJ6006509
Status: Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: -
Project Need: Growth

Project Location

District 1 2649 Rawls Rd, Duette

Description and Scope

Design trail route, select stream/river crossings and site parking area and Design and/or purchase pre-fab bridges for delivery and on site assembly at designated crossing points.

Rationale

Duette Preserve has an extensive set of vehicle trails/roads that provide access for Natural Resources land management and Utilities department staff vehicles. Members of the public may also drive a selected set of improved roads with the purchase of an annual pass. These are generally 20-25' wide and provide little to no shade. We believe that a dedicated multi-use pedestrian, trail bike, and equestrian trail should be created. A lack of shade on trails is one of the few common complaints we get about the preserve. A separate designated trail that does not permit vehicles on it would be routed through more heavily forested areas. This trail for the most part, can be constructed in-house by NRD staff. Several new pedestrian bridges and a parking lot will need to be designed permitted and constructed.

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: No
Project Need: Growth, Deficiency

Project Location

District 3 Emerson Point Preserve

Description and Scope

Develop contract specifications and work with procurement to develop a solicitation for the design permitting, and construction of land forming & habitat creation/restoration, parking area, pavilion, restrooms, access road & septic for residential out holding, Trails, overlooks, bridges & boardwalks, visitors center.

Rationale

The Emerson Point Preserve Expansion purchased in July, 2024 presents an extraordinary opportunity to protect & restore coastal habitats, expand access and recreational opportunities North of the river. The preserve is regionally beloved though space for visitor infrastructure has been limited due to the need to protect cultural resources and preserve critical habitats. This project will restore vital habitats, expand water access, passive recreation, and educational program offerings. The construction of parking, restrooms, a pavilion, trails, water overlooks, and a visitor center are proposed here.

Project Title: Washington Park Phase II
Department: Natural Resources
Project Mgr: Charlie Hunsicker
Infra. Sales Tax: Yes
Project #: PJ6012610
Status: Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: No
Project Need: Growth

Project Location

Multi-district 605 39th St E, Palmetto

Description and Scope

Site restoration including placement and contouring of approximately 850,000 cubic yards of dredged material obtained and delivered from Port Manatee for filling approximately 30 acres of impaired wetland, enhancement of an additional 46 acres of impaired wetlands as required by permit for mitigation of the filling of the adjacent 30 acres of impaired wetlands and uplands. This project will create a community asset for passive recreation including hiking, biking, and stormwater quality improvements. Washington Park is designed to be completed in three phases. Phase 1 provides recreational amenities, restrooms, playground, and parking over approximately 12 acres in the southwest corner of the parcel (addressed separately in CIP project number 6012627, and 6012628). This project is for Phase II which consists of permitting, final design, storm water infrastructure, contouring of fill placement, and site stabilization with 2 feet of clean fill cover to support landscaping for in-filling the abandoned borrow pit. The project also includes trail construction, pedestrian bridges, and landscaping by Manatee County. The US Army Corps of Engineers (ACOE) are supplying and placing a total of 1 million cubic yards in the borrow pit for an equivalent market value exceeding 16 million dollars. Phase III (CIP project NR01715) will entail the provision of additional recreational amenities on the restored 60 acres of the site.

Rationale

The Natural Resources Department is required to fund permitting associated environmental mitigation and enhancement inside the property associated with the Army Corp Infill project. County will perform restoration activities such as final grading and contouring requiring an additional two feet of topsoil covering for stabilization, landscape plantings, construction of trails, and a trail bridge linking Washington Park Phase I recreational area to the Phase II restoration area. This is the second phase of a three phase project which includes final design and extensive wetland restoration and mitigation, including site stabilization for the park in-fill project, in partnership with the US Army Corps of Engineers who are supplying and placing a total of 1 million cubic yards for an equivalent market value exceeding 16 million dollars.

Project Title: Living Lab at Geraldson Farm - Demonstration Area
Department: Natural Resources
Project Mgr: Charlie Hunsicker
Infra. Sales Tax: Yes
Project #: PJ6053920 **Status:** Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: No Project Need: Growth

Project Location

District 3 1401 99th St NW, Bradenton

Description and Scope

The Land Lab would provide space for: a community composting demonstration site to highlight the variety of ways individuals can reduce food waste, while contributing to their garden and landscape success. Members will be able to drop off food scraps and receive finished compost for use in the Land Lab or elsewhere. A honeybee demonstration area consisting of three demonstration hives utilized to train backyard beekeepers as well as general public on honey bee awareness and potential concerns with beekeeping. Hydroponic stacker demonstration area to highlight types of hydroponic systems for growing vegetables, herbs, and fruits in a compact vertical growing space.

Rationale

In 2005, the Manatee County Board of County Commissioners (BCC) voted to purchase the approximately 20-acre Geraldson's Farm in Bradenton with the intent to protect the property from development and to use it for agriculture education and in demonstration of best agricultural practices associated with food production. A small portion of the property is currently used as office space and equipment storage by the Natural Resources department. The primary goal of this project is to design, construct, and implement an outdoor educational land lab that includes community gardens, a community composting area, backyard beekeeping demonstration area, small farm hydroponic system, 4-H/FFA livestock barn, pasture, and teaching pavilion utilizing approximately 5 acres at the former Geraldson Farm site. The Land Lab will provide youth and adults that would not otherwise have access to land for agricultural projects with a space to participate in hands-on agricultural learning, including crop production, animal husbandry, and community engagement. The Land Lab would also be accessible to school and community groups for agricultural awareness and education programs through field trips, tours, and workshops facilitated by Natural Resources Department/ Ag and Extension Services Division.

Description and Scope

The Land Lab would provide space for: A trail connecting to the adjacent Palma Sola Botanical Gardens and extending through the property would allow visitors to the botanical garden to take an extended walk in a grove of mixed native trees and a large number of hardy edible fruit trees known to thrive in the area including Mango, Lychee, Longan, Starfruit, Avocado, and citrus varieties among others.

Rationale

In 2005, the Manatee County Board of County Commissioners (BCC) voted to purchase the approximately 20-acre Geraldson's Farm in Bradenton with the intent to protect the property from development and to use it for agriculture education and in demonstration of best agricultural practices associated with food production. A small portion of the property is currently used as office space and equipment storage by the Natural Resources department. Project Location

District 3 1401 99th St NW, Bradenton

Description and Scope

The Land Lab would provide space for: A livestock barn for youth to house a range of animal projects The barn would be able to accommodate poultry, rabbit, goat, swine, and cattle projects for up to 30 students. The lab will consist of a 5,400 - 6,000 square foot livestock barn, with concrete floors and an adjustable livestock paneling system that can be reconfigured to accommodate housing needs for a variety of animal species. The barn will also include a washing/grooming area, an enclosed feed room and storage area, small office, restroom, and a teaching and demonstration area for workshops and field trip programs. Outside the footprint of the barn will include 2.5 acres of fenced pasture area, a chicken coop, and an area for temporary manure storage prior to removal.

Rationale

In 2005, the Manatee County Board of County Commissioners (BCC) voted to purchase the approximately 20-acre Geraldson's Farm in Bradenton with the intent to protect the property from development and to use it for agriculture education and in demonstration of best agricultural practices associated with food production. In 2005, the Manatee County Board of County Commissioners (BCC) voted to purchase the approximately 20-acre Geraldson's Farm in Bradenton with the intent to protect the property from development and to use it for agriculture education and in demonstration of best agricultural practices associated with food production. A small portion of the property is currently used as office space and equipment storage by the Natural Resources department. The primary goal of this project is to design, construct, and implement an outdoor educational land lab that includes community gardens, a community composting area, backyard beekeeping demonstration area, small farm hydroponic system, 4-H/FFA livestock barn, pasture, and teaching pavilion utilizing approximately 5 acres at the former Geraldson Farm site. The Land Lab will provide youth and adults that would not otherwise have access to land for agricultural projects with a space to participate in hands-on agricultural learning, including crop production, animal husbandry, and community engagement. The Land Lab would also be accessible to school and community groups for agricultural awareness and education programs through field trips, tours, and workshops facilitated by Natural Resources Department/ Ag and Extension Services Division.

Project #: PJ6061161
Status: Existing

Comprehensive Plan Information

CIE Project: No
LOS/Concurrency: Yes
Project Need: Deficiency, Other

Project Location

Multi-district Palmetto to parrish

Description and Scope

This project is for 60% of design of the entire railway length along with completing 100% of design of segment 1 allowing for the completion of construction of segment 1 in East Palmetto. Construction of segment 1 involves a 10 to 12 foot paved trail segment parallelling 17th St East and 21st St Court East intercepting with FPL railroad right of way. Future phases of construction will continue trail segments along FPL rail right of way to Buffalo Rd. Whereupon the trail will continue as a multipurpose pedestrian trail along Buffalo Rd to 69th St East where the trail will return to a rails with trails configuration to rejoin with FPL railroad at the 69th St East/Erie Rd intersection continuing along FPL right of way to the Hillsborough County line. Construction design will include a combination of multipurpose trail construction following road right of way along with a rails with trails methodology providing for trail construction alongside existing railbeds. The existing railway through this segment will remain functional and the project will be built in multiple sub-phases depending upon availability of funds.

Rationale

This Gateway Greenway Trail segment is intended to utilize the existing Florida Power and Light (FPL) railroad track rights of way and other county rights of way where railroad track connections are not available, to provide an uninterrupted multipurpose trial connecting Lincoln Park in Palmetto to the Parrish area including direct connections to Palmetto Community High School and continuing north alongside FPL trackage to the Hillsborough County line. This construction involves a rails with trails methodology providing for trail construction alongside existing railbeds. The existing railway through this segment will remain functional. This project requires extensive discussion and confirmation with FPL in the development of trail design, trail construction, and utilization agreements. By letter agreement executed by the County Administrator, Manatee County is working with Representatives of the Trust For Public Lands (TPO) non-profit organization to assist in negotiations, grant writing, and liaison with the FDEP office of Greenways and Trails and the Sarasota/Manatee MPO.

Project Title: Hidden Harbor Park Mitigation Site Invasive Vegetation Management
Department: Natural Resources
Project Mgr: Sherri Swanson
Infra. Sales Tax: No
Project #: PJ6067408 **Status:** Existing

Comprehensive Plan Information

CIE Project: No
LOS/Concurrency: No Project Need: Maintenance

Project Location

District 1 1626 Fort Hamer Road, Parrish

Description and Scope

The Southwest Florida Water Management District (SWFWMD) will allocate funding to Manatee County for vegetation management in the mitigation areas to maintain permit compliance. The Ecological and Marine Resources Division of the Natural Resources Dept will use the funds to manage contractor services in line with the restoration goals for HHP. Invasive vegetation can overwhelm native vegetation, hinder ecological function, and fuel wildfires. The project will manage vegetation designated as Florida Invasive Species Council Categories I and II levels at 5% or less. The funding allows the County to continue vegetation management within the mitigation areas.

Rationale

In 2015 Manatee County partnered with the Southwest Florida Water Management District (SWFWMD) to designate portions of Hidden Harbor Park (HHP) as wetland mitigation. The
mitigation activities were funded through SWFWMD's FDOT Mitigation Program. SWFWMD is obligated to maintain the mitigation areas in compliance with state and federal permits.
This agreement with SWFWMD will designate reoccurring funds to Manatee County for vegetation management within the FDOT mitigation areas over five years. Subsequent agreements will be prepared in five-year increments to fund vegetation management, in perpetuity.

Infra. Sales Tax: No
Project #: PJ6067409
Status: Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes
Project Need: Growth

Project Location

District 1 1625 Fort Hamer Road, Parrish

Description and Scope

The project will include engineering design and permitting followed by on-the-ground implementation. The design expands hydrologic connections to the Manatee River by transforming an eroding agricultural ditch into a tidal creek. The project will require excavation to create wetlands, providing opportunities to beneficially use suitable excavated soils for an observation mound and to fill formally excavated agricultural ditches currently draining Hidden Harbor Park (HHP) Preserve.

Rationale

The project will restore 20 acres of public land within the 229-acre HHP Preserve by reestablishing hydrology, enhancing biodiversity, and providing refuge for aquatic and terrestrial wildlife. Soils excavated from the restoration project will be used beneficially onsite, to fill relic agricultural ditches and create a public observation mound. The project will also provide hiking trails and wildlife viewing opportunities.

Project #: PJ6068502 **Status:** Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes Project Need: Growth

Project Location

District 1 905 Rye Wilderness Trail, Parrish

Description and Scope

Design, permit, and construct three (3) pedestrian bridges and kayak launch, to include wetland impact mitigation costs (ideally on-site wetland habitat improvement). Also, install campground host site, to include design, permit and construction of 22 concrete R.V. pads, R.V. campground with water, sewer and electric connections, dedicated restroom and shower facility, 8 auxiliary tent only campsites, and R.V. pump out station.

Rationale

This project is needed to address increased demands for East County residents to enjoy passive nature based recreation closer to the shifting population center. Improvements include upgrades to the canoe/kayak launch and internet connectivity along with construction of a new RV campground with amenities and separate tent camping only facility. While all county residents will ultimately benefit, we anticipate central and east county residents north and south of the river will be chief beneficiaries with area population numbers exceeding 100,000.

Project Need: Growth

Project Location

District 1 905 Rye Wilderness Trail, Parrish

Description and Scope

The Rye Preserve Cemetery Buffer property is approximately 4 acres adjacent to the northeast corner of the existing Rye Preserve. The property surrounds the historic Rye Cemetery all sides. The County proposes to purchase the property in fee and will manage it for conservation value.

Rationale

The Environmental Lands Management and Acquisition Committee (ELMAC) advises the Board of County Commissioners on environmental land acquisition, environmental land management, and recreational programming and was authorized to implement the Conservation and Parks Projects Referendum. The referendum, approved by Manatee County voters in 2020, established a 0.15 mill ad valorem tax and issuance of up to $50,000,000 in bonds to finances the acquisition, improvement, and management of land to protect water resources, preserve fish and wildlife habitat, and provide parks. Following an October 10, 2023 Bond Resolution, $36,400,000 in bond funds were received on November 8, 2023. Staff presented the Rye Preserve Cemetery Buffer conservation project to ELMAC March 3, 2024 for review and prioritization. ELMAC unanimously recommended the Rye Cemetery Buffer property for due diligence leading to consideration for purchase by BCC. Staff informed BCC of the recommendation via memo March 7, 2024.
The site is comprised primarily of upland hardwood forest and is home to gopher tortoises, a protected species. Rye Branch passes through the northwest corner of the property before it meanders through Rye Preserve to the Manatee River.

CIE Project: Yes
LOS/Concurrency: - Project Need: Growth, Deficiency

Project Location

District 1 Rye Preserve- 905 Rye Wilderness Trail

Description and Scope

Develop contract specifications and solicit bids. Hire contractor and oversee construction of roadway and kayak launch improvements.

Rationale

Significant improvements to the existing campground at Rye are being designed including revamped sites for RVs with water and electric hook-ups, a pump-out station, and a restroom w/lift station. These improvements are putting pressure on space within the footprint of the existing campground. We have identified another suitable location for the tent loop directly along the Manatee River that will provide a more compelling tent camping experience that includes a convenient kayak launch.

Project Location

District 3 11700 Manatee Ave West, Bradenton

Description and Scope

Create an approximate 15 acre seagrass mitigation area with access trail and boardwalk at the Perico Preserve on land owned by Manatee County. Transplant sea grass extracted from Perico Bayou into the sea grass mitigation area and monitor for success for a period of 5 years.

Rationale

The seagrass mitigation project will provide two primary benefits. The first benefit will be to provide mitigation credits for a fee paid to Manatee County from the City of Sarasota ,Port Manatee or possibly to another user of the credits, such as Florida Department of Transportation (FDOT), and the second benefit will be to provide 50,000 cubic yards of clean fill for the refurbishment of reclaimed water ponds at the Southwest Regional Wastewater Treatment Plant.

Project #: PJ6081002
Status: Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: No
Project Need: Growth, Other

Project Location

District 1 37655 East State Road 70, Myakka City

Description and Scope

The Crane Park Addition property is approximately 16 acres adjacent to the north side of existing Crane Park in Myakka City. The County proposes to acquire the property in fee for conservation and recreation purposes. Sports and Leisure Services will manage the property.

Rationale

The Environmental Lands Management and Acquisition Committee (ELMAC) advises the Board of County Commissioners on environmental land acquisition, environmental land management, and recreational programming and was authorized to implement the Conservation and Parks Projects Referendum. The referendum, approved by Manatee County voters in 2020, established a 0.15 mill ad valorem tax and issuance of up to $50,000,000 in bonds to finances the acquisition, improvement, and management of land to protect water resources, preserve fish and wildlife habitat, and provide parks. Following an October 10, 2023 Bond Resolution, $36,400,000 in bond funds were received on November 8, 2023. Staff first presented the property to ELMAC for review and prioritization on April 1 , 2024 when the property was being considered as a wetland mitigation opportunity in addition to conservation and expanding the park. Further evaluation indicated the property was not ideally suited for wetland mitigation. The Crane Park Addition was presented a second time to ELMAC on January 5, 2025 and the property was unanimously recommended for due diligence leading to consideration for purchase by BCC. Staff informed BCC of the recommendation via memo January 22, 2025.
The site is comprised of about 8 acres open forest being grazed by cattle and 8 acres of wetlands. Crane Park, which is along the banks of the Myakka River, experiences regular seasonal flooding. The "addition" provides higher ground onto which areas of passive recreational use can be shifted. Riverbanks and adjacent wetlands have potential for restoration to improve water quality and wildlife habitat, possibly in partnership with the Coastal and Heartland National Estuary Program (CHNEP) using grant funds.

Project Need: Growth

Project Location

District 3 1704 99th St NW, Bradenton

Description and Scope

Design, permit and build picnic pavilions following the construction means and methods utilized in the construction of the picnic pavilion installed at the Jiggs Landing Preserve. Fixtures include electrical outlets, overhead ceiling fans (timers), LED lights (timers) and a spigot. Capable of holding picnic tables.

Rationale

The 150 acre expansion to Robinson Preserve will more than double available parking and lead to an associated increase in visitation. To support this visitation the Robinson Preserve currently has only one screened pavilion to host individual and family picnics and retreats. We anticipate a significantly increased demand for this amenity. We are requesting funds to construct new pavilions similar in design to the large picnic pavilion installed at the Jiggs Landing Preserve, with the options of cement flooring, structural screened walls, electric and water service for maintenance.

Description and Scope

Survey of portions of property boundary where possible encroachments exist. Design & permitting of trail, parking lot, pavilion, and kayak launch. Construction of picnic pavilion, parking lot, kiosk, trail system. Construction of select portion of perimeter and parking lot fence, and installation of parking landscaping.

Rationale

In 2018, the purchase of the Myarra parcels completed the acquisition of the Johnson Preserve at Braden River. Public meetings held prior to the acquisition and immediately after gathered feedback on the expectations of the community around the property and its use. The broad consensus emerged around minimal development of the property with emphasis on neighborhood access and limited parking for regional access. A simple trail system, small 10 space parking lot, a small picnic pavilion, benches, a kayak launch, and a kiosk and fencing was requested and were offered as likely improvements to be forthcoming. This CIP proposes funding for basic site security to include perimeter fencing and electric gate, and access improvements including property boundary and easement survey, boundary fencing, creation of trails, gates, parking lot, relocation of kayak launch, kiosk, up to four interpretive signage and picnic pavilion.

Description and Scope

Design and permit for site improvements at Crooked River Ranch including kayak launch, primitive campground, electric service panel and meter, electric gates, fencing, and mobilization.

Rationale

The Crooked River Preserve was acquired under the voter-approved Environmental Lands Acquisition Program and with assistance from the Florida Communities Trust program, and National Oceanographic and Atmospheric Administration. It is approximately 65 acres located along the Manatee River. It preserves important habitat provides much needed nature based recreational opportunities in the West Parrish area including water access for paddle craft to the Manatee River. A Successful grant submitted to the Florida Communities Trust for 1.5 million dollars will obligate the county to build a number of basic passive recreational amenities including a kayak launch, picnic pavilion, interpretive kiosk, pedestrian trails with benches, an observation tower, a fishing pier/water overlook, primitive campground and a parking area with restroom.

Category: Natural Resources Category **Subcategory:** Preserves
Project Title: North Pine Island Preserve Land Acquisition
Department: Natural Resources
Project Mgr: Debra Woithe
Infra. Sales Tax: -
Project #: PJ6121100 **Status:** Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes Project Need: Growth

Project Location

District 2 North tip of Pine Island Preserve, Bradenton

Description and Scope

The North Pine Island property is approximately 13 acres, most of which directly abuts the existing Pine Island Preserve in the Braden River, a tributary to the Manatee River. The site is comprised primarily of mangroves with a small area of mesic flatwoods. The property is only a quarter of a mile up the Braden River from Dot Dash Dit, a Florida Fish and Wildlife Conservation Commission Critical Wildlife Area (CWA) which supports Tampa Bay's only coastal colony of wood storks. The three mangrove islands that make up the CWA were purchased by Florida Audubon Society to protect the rookery. Roseate spoonbills also nest at Dot Dash Dit, along with great egrets, great blue herons, and other coastal birds. Acquisition of North Pine Island will protect high quality native habitat which supports wildlife species that reside in and migrate to the area. Management of the property for conservation will protect water quality and fish habitat. The site adds conservation value to the Manatee River Corridor, a strategic conservation corridor that extends from Tampa Bay and the Terra Ceia Bay Aquatic Preserve to the Florida Wildlife Corridor. The property is also within the Florida Ecological Greenways Network and an FDEP Impaired Water Quality Basin. Adding this property to the existing Pine Island Preserve will make site management more efficient and effective for Manatee County staff. No additional Ranger or FTE for the addition of the 13-acre North Pine Island to the existing Pine Island Preserve are needed.

Rationale

The Environmental Lands Management and Acquisition Committee (ELMAC) advises the Board of County Commissioners on environmental land acquisition, environmental land management, and recreational programming and was authorized to implement the Conservation and Parks Projects Referendum. The referendum, approved by Manatee County voters in 2020, established a 0.15 mill ad valorem tax and issuance of up to $50,000,000 in bonds to finances the acquisition, improvement, and management of land to protect water resources, preserve fish and wildlife habitat, and provide parks. Following an October 10, 2023 Bond Resolution, $36,400,000 in bond funds were received on November 8, 2023. Staff presented the North Pine Island conservation project to ELMAC July 2024 for review and prioritization. ELMAC unanimously recommended the North Pine Island property for due diligence leading to consideration for purchase by BCC. Staff informed BCC of the recommendation via memo July 2024.

Description and Scope

Phase III - Development of passive trails, boardwalk, observation platforms and interpretive signage atop Army Corps of Engineers (ACoE) project.

Rationale

This is the third phase of a three phase project which includes development of passive trails, boardwalk, observation platforms and interpretive signage atop the US Army Corps of Engineers project. The Master Plan identifies the need to provide additional interpretive environmental recreation experiences.

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: -
Project Need: Growth, Deficiency

Project Location

District 3 11700 Manatee Ave W, Bradenton

Description and Scope

*Permit restroom building and sewer connections
*Purchase pre-engineered prefab restroom building
*Contract for pouring foundation, water, & sewer Utilities installation

Rationale

Perico Preserve has been increasing in its visitation steadily since it's opening in 2016. The preserve now receives approximately 20,000-24,000 visitors per year and is located along a busy multi use trail connecting Bradenton and Anna Maria Island communities. We believe a restroom located here will be an appreciated amenity.

Status: Requested

Comprehensive Plan Information

CIE Project: No
LOS/Concurrency: Yes
Project Need: Deficiency

Project Location

District 1 2649 Rawls Rd, Duette

Description and Scope

Determine approach for design and permitting of H20 load rated bridge extending deck to 12' and fitting to existing substructure vehicular bridge 80'x12' on trail 14 at the North Fork of the Manatee River.

Rationale

Duette Preserve is the county's largest preserve and is a well field for the county's drinking water supply. It contains over 50 miles of trails used by Utilities, Natural Resources, visitors, and collaborating researchers. There are many river and creek crossings. This request is for funding to expand two of the vehicular bridges and one pedestrian crossing. This expansion is needed to improve safety and capacity for larger vehicles including Utilities, Natural Resources, FPL, and the public. Utilities uses these bridges to access the potable water wells on the property.

Category: Natural Resources Category **Subcategory:** Preserves
Project Title: Emerson Expansion- Gates and Entrance Rd
Department: Natural Resources
Project Mgr: Michael Elswick
Infra. Sales Tax: -
Project #: PJTP26041 **Status:** Requested

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: - Project Need: Growth, Deficiency

Project Location

District 3 Emerson Point Preserve

Description and Scope

Develop contract specifications and work with procurement to develop a solicitation for the design permitting, and construction of automated electric gates and entrance road.

Rationale

The Emerson Point Preserve Expansion purchased in July, 2024 presents an extraordinary opportunity to protect & restore coastal habitats, expand access and recreational opportunities North of the river. The preserve is regionally beloved though space for visitor infrastructure has been limited due to the need to protect cultural resources and preserve critical habitats. This project will restore vital habitats, expand water access, passive recreation, and educational program offerings. The construction of parking, restrooms, a pavilion, trails, water overlooks, and a visitor center are proposed here.

Project Title:	Duette Bridge- East Fork Bridge Crossing		
Department:	Natural Resources		
Project Mgr:	Michael Elswick		
Infra. Sales Tax:	Yes		
Project #:	PJTP26057	**Status:**	Requested

Comprehensive Plan Information

CIE Project: No
LOS/Concurrency: Yes Project Need: Deficiency

Project Location

District 1 2649 Rawls Road, Duette, FL

Description and Scope

Substantial replacement of the deteriorated metal catwalk/pedestrian bridge with a fully functional pedestrian bridge crossing the East fork of the Manatee River paralleling the well water pipeline along trail 14.

Rationale

Duette Preserve is the county's largest preserve and is a well field for the county's drinking water supply. It contains over 50 miles of trails used by Utilities, Natural Resources, visitors, and collaborating researchers. There are many river and creek crossings. This request is for funding to expand two of the vehicular bridges and one pedestrian crossing. This expansion is needed to improve safety and capacity for larger vehicles including Utilities, Natural Resources, FPL, and the public. Utilities uses these bridges to access the potable water wells on the property.

MANATEE COUNTY GOVERNMENT
Capital Improvement Plan
FY2026 - FY2030

Category: Sports & Leisure Services **Subcategory:** Athletic Fields
Project Title: Braden River Park Baseball Field Improvements
Department: Sports and Leisure Services
Project Mgr: David Arbaelez Montoya
Infra. Sales Tax: -
Project #: PJ6004016 **Status:** Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: Yes Project Need: Maintenance

Project Location

District 5 5201 51st St E, Bradenton

Description and Scope

Braden River Park Baseball Field 6 Improvements project includes removal and salvage of natural turf grass, and removal of irrigation. Installation of synthetic turf, re-grading of entire field, installation of proper drainage, installation of synthetic turf irrigation system, fill replacement, replacement of LED lights, removal and replacement of existing backstop, installation of the scoreboard and all appurtenances and amenities required for a functional baseball facility.

Rationale

Braden River Park is a closed landfill that has been repurposed for athletic fields. Baseball field 6 has become unusable due to uneven settlement of landfill material below the field. Repeated efforts to re-grade the field into usable condition have been unsuccessful. Therefore, a synthetic turf system including the enhanced base material is necessary to stabilize the field.

Project Location

District 5 5201 51st St E, Bradenton

Description and Scope

Remove and replace backstops.

Rationale

To replace end of life backstops for the fields outlined: Fields 1-2-3-4-5; Field 7; Field 6 is being redone with synthetic turf.

The backstops are original and need to be replaced. The removal and disposal of the current backstops will be funded through operations and the new backstops, along with installation, will be funded through CIP.

Project Title: Braden River Park Three Synthetic Turf Fields
Department: Sports and Leisure Services
Project Mgr: Tom Yarger
Infra. Sales Tax: -
Project #: PJ6004018 **Status:** Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes Project Need: Growth

Project Location

District 5 5201 51st St E, Bradenton

Description and Scope

Construction and installation of three (3) multi-purpose synthetic turf fields to be built on the Braden River Park Sport Complex. The project will include site work, field grading, survey, irrigation, LED sports lighting and amenities required for functional multipurpose fields.

Rationale

Braden River Park is arguably our busiest park. The baseball complex hosts Braden River Little League 5 days a week and 2-3 baseball tournaments on the weekend. The Soccer complex, positioned in the middle of Manatee County provides play to a variety of different users coming all over the County, playing 6-7 days of the week. The Soccer Complex, because of its central location and no residential youth soccer program, provides overflow to many different programs and sports throughout the week like the Braden River Soccer Club, the Lakewood Ranch Under Armor Flag Football Program, a youth girls Lacrosse Club, middle school flag football and soccer intermural, and more. On the weekends, the Soccer complex serves as home to the County¿s largest and longest standing Adult Soccer programs, men and women. The demand for sports fields is increasing which is why flexible multi-purpose fields with lights are needed. The current usage of the fields at Braden River fields, estimated at over 800 hours a year, creates a lot of wear-and-tear of the natural grass fields, which directly impacts the quality of our fields, and impacting quality of play. Because these fields see lots of adult play, the fields require additional rest periods and are sometimes closed twice as long. Parks has done a tremendous job tending to the fields every year, however due to the amount of play all those efforts simply cant keep up with the demand. Braden River Park would be an excellent location for three synthetic/artificial turf fields, providing access to many of the neighboring youth and adult programs, address reoccurring costly field repairs, and provide year round play. Enclosed are also photos of the current conditions of Braden River soccer, after resting all summer and only opening for play in September.

Category: Sports & Leisure Services **Subcategory:** Athletic Fields
Project Title: Buffalo Creek Park Athletic Field Expansion
Department: Sports and Leisure Services
Project Mgr: Tom Yarger
Infra. Sales Tax: -
Project #: PJ6004522 **Status:** Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes Project Need: Growth

Project Location

District 1 7550 69th St E, Palmetto

Description and Scope

Design and construct up to four additional soccer fields depending on site conditions, including synthetic turf system to stabilize the fields. A synthetic turf system including the enhanced base material provides cost-effective solutions for fields of any size and purpose. This project also includes solar lighting for paths and walkways, LED sports lighting for the new soccer fields; paved parking lot; parking lot lighting; expanded access road to accommodate access needs with overflow grass parking along the drive; restroom building; maintenance/storage building or shed; site utility improvements including potable water supply, sanitary sewer/stormwater conveyance and site electrical improvements; installation of proper drainage, installation of synthetic turf irrigation system, landscaping; bleachers and shade structures, site furnishings, and all appurtenances and amenities required for a functional facility.

Rationale

With the increase of population in Manatee County and the over usage of athletic fields, Buffalo Creek Park needs additional athletic fields to meet the demand of the growing leagues.

Infra. Sales Tax: -
Project #: PJ6006708
Status: Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes
Project Need: Growth, Deficiency

Project Location

District 2 1119 13th St E, Bradenton

Description and Scope

Demolish the current pool structures and replace the pool with a large splash pad with water features, concrete decking, pump house with pumps, piping, etc., restrooms/showers/lockers, multi-use synthetic turf field with lighting and irrigation, additional parking if necessary, shade structures, and other amenities and appurtenances as needed for a functional facility. A shaded gathering area or community building if space allows. This project is for the synthetic fields and irrigation.

Rationale

Project # 6006706 was approved and funded; however, after conducting community surveys and meetings to discuss the needs and desires of the community for east Bradenton park, the project has changed course. We request that the funding approved for project #6006706 be used for this new project. The pool has been closed for safety concerns and staffing shortfalls. The desire of the community is to replace the existing pool with a large splash pad, a multipurpose field with synthetic turf, additional parking, and security lighting.

Status: Requested

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: -
Project Need: -

Project Location

District 3
5502 33rd Ave Dr West, Bradenton

Description and Scope

Construction and installation of multi-purpose synthetic turf field to be replace the current natural turf. The project will include site work, field grading, survey, irrigation, fencing, drainage, and amenities required for functional multipurpose fields.

Rationale

G.T. Bray Park is a highly used facility for athletic league play featuring 5 programmed soccer fields. This complex has over 1300 reservations and nearly 3,300 hours of scheduled play across the five fields. Additionally, there is a considerable amount of adult play, which can be more damaging to natural turf. Repurposing fields with artificial turf would be both economically effective and allow for increased play for both youth and adult athletes. End of season field conditions suggest field replacement at a cost of roughly $140K annually. However, due to budget limitations and having to spread sod funding throughout county, we have only been able to spot fill areas with about $11K- $30K each year during our annual 2-month field closure for sod regrowth. Adding an artificial turf field will eliminate closure of all fields, keeping space open for year round play. It will reduce sod needs and costs at GT Bray, meet the growing demand for increased play county wide, and keep up with industry trends of adding turf throughout sports complexes.

Project #: PJ6023508
Status: Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes
Project Need: Growth, Deficiency

Project Location

District 2 501 17th St E, Palmetto

Description and Scope

Design and construct park improvements which include the Lincoln school tunnel upgrades to incorporate historic façade; build a bridge between the Sylvan Oaks development connecting to Lincoln Park; install a 6ft parameter chain link fence at the football field for crowd control; and a scoreboard.

Rationale

Lincoln Park currently has a playground, splash pad, trails, picnic pavilions, basketball courts, football field and a new pool under construction in 2021. Lincoln Park is surrounded by neighborhoods, such as Sylvan Oaks, and is adjacent to the Lincoln School tunnel. With the addition of the pool, the basketball courts were relocated closer to the football field. A new/additional restroom, centrally located on site, allows for the facility to better satisfy the increased capacity needs of the public. There is currently an insufficient amount of bleachers on site, which results in temporary bleachers being moved from one field to another. The new/additional bleachers, including a permanent pad, will allow the facility to better satisfy the increased capacity needs of the public. The other amenities are improvements that will greatly benefit the community.

LOS/Concurrency: Yes
Project Need: Growth, Deficiency

Project Location

District 2 501 17th St E, Palmetto

Description and Scope

Design and construct a restroom at the center of the park north of the football fields (walk in restroom facilities to accommodate the basketball and football players; separate men and woman walk in facilities - up to 3 urinals and 2 stalls for the men and up to 5 stalls for the women).

Rationale

Lincoln Park in Manatee County current has a playground, splash pad, trails, picnic pavilions, basketball courts, football field and a new pool under construction in 2021. Lincoln Park is surrounded by neighborhoods, such as Sylvan Oaks, and is adjacent to the Lincoln School tunnel. This business case identifies park improvements such as the need for an additional restroom. With the addition of the pool, the basketball courts were relocated closer to the football field. The football and basketball players would have to walk all the way to entrance of the park to use the restroom which is quite the distance. Currently, the football players use the adjacent woods to use the restrooms which we are trying to avoid for the neighborhoods that surround the football field.

Project Location

District 2 501 17th Street East, Palmetto

Description and Scope

Renovate parking lot near restrooms and playgrounds to include additional parking spots. Relocate pavilions to the outer boundary of the property to increase usage space, evaluate playground for removal or relocation.

Rationale

Lincoln Park has undergone a tremendous amount of improvements including a new aquatic center and basketball courts. These new additions are increasing the usage of the facilities causing a tremendous parking issue with swim meets, league play and general usage. When the athletic fields are in use for football, swim meets are occurring and the basketball courts are utilized by the community, parking becomes a safety hazard with no room for emergency vehicles to access facilities and those who may be in need. Evaluating the playground, relocating pavilions to the edge of the property, renovating the current parking lot opens up additional spaces would increase the safety, flow and accessibility to the amenities and ensuring all pertinent items are required to make a functional facility.

Project Location

District 2 501 17th St E, Palmetto

Description and Scope

Construction and installation of one (1) multi-purpose synthetic turf field to be built in Lincoln Park Sport Complex. The project will include site work, field grading, survey, lighting, and irrigation.

Rationale

Lincoln Park is considered an overflow field for the county, mostly extra play for our Palmetto based teams at Blackstone. Blackstone has a lot of concerns from overuse with tremendous soccer play from leagues, schools, and it one of heaviest adult play location as well. Adult teams tend to do more damage to the fields based on level of play, strength, etc. Blackstone has hosted over 600 field reservations this year just for soccer That in tandem with the ongoing water supply issues at Blackstone, these fields can not sustain all this play with no outlet. If we can create a sustainable field in that area with synthetic turf, and move all adult play off Blackstone, we would have tremendous improvements at both locations. Synthetic fields will allow for year round play with minimal damage, allow for increased travel team play, tournaments, and ultimately revenue for the County. We are seeking 1 field at Lincoln be considered for synthetic turf.

Project Title: Premier Sports Complex Two Synthetic Turf Fields
Department: Sports and Leisure Services
Project Mgr: Tom Yarger
Infra. Sales Tax: -
Project #: PJ6093313 **Status:** Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes Project Need: Growth

Project Location

District 5 5895 Post Blvd, Lakewood Ranch 34211

Description and Scope

Construction and installation of two (2) multi-purpose synthetic turf fields to be built on the Premier Sports Complex property, north of the current Premier Sports Campus. The project will include site work, field grading, survey, irrigation, LED sports lighting and all appurtenances and amenities required for functional multipurpose fields.

Rationale

Flexible, multi-purpose synthetic turf fields with lights are needed as the current usage of the fields in all County owned parks creates a lot of wear and tear on the natural grass fields, which is costly to replace and maintain. When grass sod is replaced, it takes several months for the new fields to be ready, thus interrupting local youth sports practices for long periods of time. At the Premier Sports Campus, worn grass turf fields can mean the loss of the majority (if not all) of the elite national and international events coming to Manatee County. These events provide between $40-$50 million of economic impact annually to our destination. Another concern is that many youth are turned away each year due to not enough fields for organizations to expand. Local practices and leagues would benefit from these two synthetic/artificial turf fields, as they can be used as overflow when space is limited or to allow grass turf fields to rest throughout the year to minimize costly repairs and/or replacements.

Status: Requested

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes
Project Need: Growth

Project Location

District 5 Lakewood Ranch Park: 5350 Lakewood Ranch Blvd, Bradenton

Description and Scope

This project involves the design, permitting, construction and installation of two multi-purpose synthetic turf fields at the Lakewood Ranch Park, including necessary site work, grading, irrigation, survey, and lighting. Improvements will also be made to the drainage systems for Lakewood Ranch Park. An additional parking plan will be developed to encompass the areas most frequently used for overflow parking, with structured, low-maintenance asphalt or another approved base, proper lighting, and effective drainage. All other appurtenances as needed for a functional facility. This project is for the restrooms.

Rationale

Lakewood Ranch Park is rapidly becoming the recreational hub on the East side of the County, hosting over 27,000 hours of scheduled athletic play between June 2023 and May 2024. Forty percent of these scheduled hours are allocated to our soccer and football fields. The identified needs include additional fields, improved irrigation, and enhanced parking facilities. Including are all appetences needed for a fully functioning facility.
To address these requirements, we propose leveling and surfacing currently used parking areas with gravel, along with designing more efficient parking layouts to maximize space and enhance safety. This initiative will focus on areas such as softball, T-ball, basketball, and soccer/football. Additionally, to increase parking capacity on the park's south side, we plan to repurpose underutilized handball courts into additional parking spaces for pickleball/tennis and overflow soccer parking. A prefabricated restroom facility will also be installed in this area.
Furthermore, crucial to our goals is the implementation of a comprehensive irrigation and drainage system across the entire park to ensure effective water management. Finally, to meet the growing demand for field space, we aim to install two regulation-size turf soccer fields for year-round and extended play.

Project Location

District 5 7300 Belleisle Glen, Lakewood Ranch

Description and Scope

Conversion of the existing multipurpose field at Country Club East to accommodate up to 3 fully equipped little league baseball fields with expanded parking. Other improvements include: bleachers, dugouts, backstops, bases, perimeter fencing.

Rationale

Little league baseball play in eastern Manatee County is growing along with the population in the area. The demand for little league fields have surpassed capacity currently at six fields serving developments east and south of the Manatee River.

Description and Scope

This project is to increase the amount of restrooms at Buffalo creek park to accommodate the users and increase fields that are being installed in the park. Construction of new restrooms with a concession/storage area. The civil side of this project will require new wet and dry utilities.

Rationale

The Parks Master Plan identifies a need at Buffalo Creek Park for additional athletic fields to meet the demand of the growing leagues. Phase I has been identified as expanding the current soccer fields with restrooms and parking (Prj #6004520). Phase II includes renovating the baseball/softball fields (Prj #6109900, #6109901 and #6109902).

Project Title: Buffalo Creek Park Shade Structure
Department: Sports and Leisure Services
Project Mgr: Tom Yarger
Infra. Sales Tax: Yes
Project #: PJ6113502
Status: Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: Yes
Project Need: Deficiency, Other

Project Location

District 1 7550 69th St E, Palmetto

Description and Scope

Estimated need based on the status of shade in the respective park. A full study, should be completed to evaluate the conditions of any current shade systems, the fabric or hardtop and the associated cables, along with accurate bleacher counts and sizes. The numbers provided reflect the number of bleachers present and do not reflect the specific number of shade structures requested as there may be instances where 1 canopy could cover 2 bleachers, with cost savings. Add (8) Shade Structures on the three Soccer Fields. Add (4) Shade Structures on the Football Field.

Rationale

At night, the Parks flow with excited parents and family members crowded around the fields, filling the uncovered bleachers as they cheer on the children. On the weekends, those same bleachers sit empty as families seek shelter from the hot Florida sun any way they can. Shade is important and it is also missing throughout much of Manatee County Park systems. The Shade Structures currently in place were purchased many years ago and are in need of repairs or replacements, leaving the youth leagues to choose between player scholarships or funding for shade structures.

Project Title: Retrofit Lighting Braden River Park - Soccer Field #1
Department: Property Management
Project Mgr: David Shurmur
Infra. Sales Tax: -
Project #: PJ6118916 **Status:** Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: Yes Project Need: Other

Project Location

District 5 5201 51st St E, Bradenton

Description and Scope

Remove the current Halogen lights and brackets from the poles currently in place. Poles will be reused and new light brackets and LED field lighting will be installed. Lights will be installed to MUSCO control link software. Grounding will be reinforced, all permitting will be completed by the contractor, and light designs will be made to ensure sufficient light is spread evenly across the playing surfaces. Scope of the project a Braden River Park will include multiple fields. Lights will be installed 1 field at a time to not disrupt field use. Lights will be tested, inspected and measured at completion.

Rationale

As Manatee County is looking to become more energy efficient and move away from outdated lighting technology, we are looking to retrofit our current athletic field lights to LED lighting provided by MUSCO technologies. This lighting is a brighter light that uses much less energy and provides direct lighting to the playing surfaces with the spill lighting off of the field and much less glare when you look directly at the lights, making it more convenient neighbors of the park. Braden River Park is one of our most active park locations with soccer, football, softball and baseball fields.

Project Title: Retrofit Lighting Braden River Park - Soccer Field #2
Department: Property Management
Project Mgr: David Shurmur
Infra. Sales Tax: -
Project #: PJ6118917 **Status:** Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: Yes Project Need: Other

Project Location

District 5 5201 51st St E, Bradenton

Description and Scope

Remove the current Halogen lights and brackets from the poles currently in place. Poles will be reused and new light brackets and LED field lighting will be installed. Lights will be installed to MUSCO control link software. Grounding will be reinforced, all permitting will be completed by the contractor, and light designs will be made to ensure sufficient light is spread evenly across the playing surfaces. Scope of the project a Braden River Park will include multiple fields. Lights will be installed 1 field at a time to not disrupt field use. Lights will be tested, inspected and measured at completion.

Rationale

As Manatee County is looking to become more energy efficient and move away from outdated lighting technology, we are looking to retrofit our current athletic field lights to LED lighting provided by MUSCO technologies. This lighting is a brighter light that uses much less energy and provides direct lighting to the playing surfaces with the spill lighting off of the field and much less glare when you look directly at the lights, making it more convenient neighbors of the park. Braden River Park is one of our most active park locations with soccer, football, softball and baseball fields.

Project Title: Retrofit Lighting Blackstone Park - Softball Field #1
Department: Sports and Leisure Services
Project Mgr: David Shurmur
Infra. Sales Tax: -
Project #: PJ6118929 **Status:** Existing

Comprehensive Plan Information

CIE Project: No
LOS/Concurrency: Yes Project Need: Other

Project Location

District 2 2112 14th Avenue W, Palmetto

Description and Scope

Remove the current Halogen lights and brackets from the poles currently in place. Poles will be reused and new light brackets and LED field lighting will be installed. Lights will be installed to MUSCO control link software. Grounding will be reinforced, all permitting will be completed by the contractor, and light designs will be made to ensure sufficient light is spread evenly across the playing surfaces. Scope of the project a Blackstone Park will include multiple fields. Lights will be installed 1 field at a time to not disrupt field use. Lights will be tested, inspected and measured at completion.

Rationale

As Manatee County is looking to become more energy efficient and move away from outdated lighting technology, we are looking to retrofit our current athletic field lights to LED lighting provided by MUSCO technologies. This lighting is a brighter light that uses much less energy and provides direct lighting to the playing surfaces with the spill lighting off of the field and much less glare when you look directly at the lights, making it more convenient neighbors of the park. Blackstone Park is one of our active park locations with soccer, softball and baseball fields.

Comprehensive Plan Information

CIE Project: No
LOS/Concurrency: Yes Project Need: Other

Project Location

District 2 2112 14th Avenue W, Palmetto

Description and Scope

This project intends to add low-level field lighting at Blackstone Park so all fields in the park have lights, allowing leagues and the public to utilize the space in the evenings. This would include structural engineering, permitting, poles, electric, connectors, and lighting installation.

Rationale

As the population continue to grow in Manatee County. The demand for field use in these areas is growing as well. Blackstone Park has 3 soccer fields, but only 2 have field lights. Adding low level lighting to field 3 which is a smaller field will allow the leagues using the park more space to practice and grow their league.

Project #: PJ6118941 **Status:** Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: Yes Project Need: Other

Project Location

District 3 5502 33rd Avenue Dr W, Bradenton

Description and Scope

Remove the current Halogen lights and brackets from the poles currently in place. Poles will be reused and new light brackets and LED field lighting will be installed. Lights will be installed to MUSCO control link software. Grounding will be reinforced, all permitting will be completed by the contractor, and light designs will be made to ensure sufficient light is spread evenly across the playing surfaces. Scope of the project a GT Bray Park will include multiple fields. Lights will be installed 1 field at a time to not disrupt field use. Lights will be tested, inspected and measured at completion.

Rationale

As Manatee County is looking to become more energy efficient and move away from outdated lighting technology, we are looking to retrofit our current athletic field lights to LED lighting provided by MUSCO technologies. This lighting is a brighter light that uses much less energy and provides direct lighting to the playing surfaces with the spill lighting off of the field and much less glare when you look directly at the lights, making it more convenient neighbors of the park. GT Bray Park is one of our most active park locations with soccer, football, softball and baseball fields.

Project #: PJ6118945 **Status:** Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: Yes Project Need: Other

Project Location

District 3 5502 33rd Avenue Dr W, Bradenton

Description and Scope

This project intends to add low-level field lighting to the multipurpose field at GT Bray Park so that all fields in the park have lights, allowing leagues and the public to utilize the space in the evenings after dark. This would include structural engineering, permitting, poles, electric, connectors, and lighting installation.

Rationale

As the population continues to grow at a rapid pace in Manatee County, the demand for field use in these areas is growing as well. GT Bray Park is in the heart of Bradenton and is one of the most active parks in the county. Adding low-level lighting to the multipurpose field, which is a smaller field, will allow the leagues to use the park more space to practice and grow their league. This is the only field in the park without field lights.

Lights will be tested, inspected and measured at completion.

Rationale

As Manatee County is looking to become more energy efficient and move away from outdated lighting technology, we are looking to retrofit our current athletic field lights to LED lighting provided by MUSCO technologies. This lighting is a brighter light that uses much less energy and provides direct lighting to the playing surfaces with the spill lighting off of the field and much less glare when you look directly at the lights, making it a more convenient neighbor of the park. Premier Sports Campus is one of the country's premier soccer venues.

Project Location

District 5 5895 Post Blvd, Lakewood Ranch

Description and Scope

Remove the current Halogen lights and brackets from the poles currently in place. Poles will be reused and new light brackets and LED field lighting will be installed. Lights will be installed to MUSCO control link software. Grounding will be reinforced, all permitting will be completed by the contractor, and light designs will be made to ensure sufficient light is spread evenly across the playing surfaces. Scope of the project a Premier Sports Campus will include multiple fields. Lights will be installed 1 field at a time to not disrupt field use. Lights will be tested, inspected and measured at completion.

Rationale

As Manatee County is looking to become more energy efficient and move away from outdated lighting technology, we are looking to retrofit our current athletic field lights to LED lighting provided by MUSCO technologies. This lighting is a brighter light that uses much less energy and provides direct lighting to the playing surfaces with the spill lighting off of the field and much less glare when you look directly at the lights, making it a more convenient neighbor of the park. Premier Sports Campus is one of the country's premier soccer venues with 23 soccer fields.

Project Location

District 5 5350 Lakewood Ranch Blvd., Bradenton

Description and Scope

The intention of this project is to add LED field lighting at Lakewood Ranch Park. To include running power, installing poles and lighting and connect to MUSCO control link system to incorporate with the other field lights in the area.

Rationale

Lakewood Ranch Park is one of the most actively used parks in Manatee County for sports leagues. Multiple leagues use the field on a regular basis in the evenings. Gaining more fields with lighting is essential to allow these leagues additional field space to keep up with continued demand of their programs.

Project Location

District 5 5350 Lakewood Ranch Blvd., Bradenton

Description and Scope

The intention of this project is to add LED field lighting at Lakewood ranch park. To include running power, installing poles and lighting and hook up to MUSCO control link system to incorporate with the other field lights at the park.

Rationale

Lakewood Ranch Park is one of the most frequently used parks in Manatee County and field space is a premium option for leagues using the facility. Leagues such as Braden River Soccer Club, Under Armour Flag football and East Manatee Bulldogs utilize the field during the evenings on a regular basis. The addition of field lights is essential to provide needed field space for leagues. Currently, at Lakewood Ranch Park fields 7, 8 and 10 do not have lights. The addition of lights to these fields would be a significant improvement and expand league use of the park during evenings/nights.

Project #: PJ6118970 **Status:** Existing

Comprehensive Plan Information

CIE Project: No
LOS/Concurrency: Yes Project Need: Other

Project Location

District 5 6655 Greenbrook Blvd, Bradenton

Description and Scope

The intention of this project is to add LED field lighting to Greenbrook park. To include running power, installing poles and lighting and connect to MUSCO control link system to incorporate with the other field lights in the area.

Rationale

As the population continues to grow in Manatee County, especially east of I-75, the demand for field use in these areas is growing as well. Greenbrook Park consists of multiple fields but no field lighting. Other improvements have already been made to facilitate additional usage which include increased parking and converting fields to Bermuda grass. The addition of field lighting would expand field utilization for evening/night activity by leagues. This would be a significant improvement to the park and community.

Project Title: New Field Lighting Premier Sports Campus - Soccer Field #1
Department: Sports and Leisure Services
Project Mgr: David Shurmur
Infra. Sales Tax: -
Project #: PJ6118973 **Status:** Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: Yes Project Need: Other

Project Location

District 5 5895 Post Blvd, Lakewood Ranch

Description and Scope

The intention of this project is to add LED field lighting to the Premier Sports Campus. To include running power, installing poles and lighting and connect to MUSCO control link system to incorporate with the other field lights at the park.

Rationale

Premier Sports Campus is one of the top sporting destinations for events in the state and known throughout the country. The campus hosts local, statewide, and national events on a regular basis. In addition, they support the growing community of Manatee County as the home fields for many of our local leagues that continue to grow and require the field space. Of the 23 total fields, only 7 practice fields and the stadium have lights, significantly limiting the space for night activity, which is the main time for use during the week. The addition of 6 field lights would improve league and community access at Premier Sports Campus by allowing events to better utilize the facility throughout the evening/night hours.

Project #: PJ6118980
Status: Existing

Comprehensive Plan Information

CIE Project: No
LOS/Concurrency: Yes
Project Need: Other

Project Location

District 3 9800 17th Ave NW, Bradenton

Description and Scope

Replace the current non-damaged light poles at Palma Sola Park at Field #1.

Rationale

As Manatee County is looking to become more energy efficient and move away from outdated lighting technology, we are looking to retrofit our current athletic field lights to LED lighting provided by MUSCO technologies. There is a current project to remove the current Halogen lights and brackets from the poles currently in place at Palma Sola Park. Due to the recent hurricanes, some of the poles were damaged and are in the process of being replaced through FEMA reimbursement. However, due to the fact that the remaining non-damaged poles are near the end of their useful life, it was recommended to replace these poles along with the damaged poles prior to installing
the new Halogen lighting.

Project Mgr: Tom Yarger
Infra. Sales Tax: -
Project #: PJNR02250
Status: Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes
Project Need: Growth, Deficiency

Project Location

District 3 5502 33rd Ave Dr W, Bradenton

Description and Scope

Complete removal of current tee ball area and installation of little league sized baseball fields in its place, this includes all backstops, benches, bleachers, bases, clay and grass from area. Install irrigation, fencing, clay, proper turf, bases, dugouts and bleachers. Install LED lighting.

Rationale

GT Bray Park is host to one of the largest little leagues (Manatee West Little League) in the County with the least number of regulation little league fields. However, in place of little league fields the County does provide access to two tee ball fields consisting of a skinned infield, backstop, team benches, and bleachers. These fields often lack proper maintenance and consist of weeds due to lack of irrigation or fertilization. In addition to the poor quality, these fields lack a perimeter fence and are therefore isolated to use by the tee ball teams causing increased use and demand for the three little league fields at GT Bray Park. Note: No other Little League Baseball fields exist to serve west Bradenton. It is believed renovating the two existing tee ball fields will allow for further growth within the Manatee West Little League program and expanded opportunities for tournaments. Use will expand from those under 5 years of age to 12 year old's.

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes
Project Need: Growth

Project Location

District 2 280 Kay Road, Bradenton

Description and Scope

Increase sand volleyball foot print from 2 courts to 6 courts at Bennett Park. Construct and install court surfacing, poles, netting, borders and all other appurtenances to ensure a full functioning tournament-able facility with low level lighting.

Rationale

With the growing demand of sand volleyball practices, games and tournaments we are requesting the expansion of the current volleyball courts at Bennett Park from 2 courts to 6 courts with low level lighting. This will enable extended play time both for our local leagues, schools and increase the number of teams allotted for tournaments.

Department: Sports and Leisure Services
Project Mgr: John Eib
Infra. Sales Tax: Yes
Project #: PJTP26051
Status: Requested

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: Yes
Project Need: Deficiency

Project Location

District 2 2112 14th Ave. W. Palmetto

Description and Scope

Demo existing softball pavilion and prepare ground for installation of 2 standard softball batting cages with necessary lighting. By playground area, level selected area and grade properly to prepare for installation of new pavilion. New pavilion should be similar to existing playground pavilion (seats 40 people). Power source for lights. Install necessary seating.

Rationale

Blackstone Softball fields saw 5,230 hours of scheduled athletic play from January 2023 to December 2024 with 1,300 total reservations. There has been history of conflict between the pavilion users with the softball players due to the proximity to the softball field. We would like to remove the softball pavilion and replace with softball batting cages. Blackstone softball is the only softball complex at our large athletic facilities that does not have softball batting cages adjacent to their fields. Lastly, we are looking to install a second playground pavilion. This will allow pavilion rentals to continue without the disturbance of being beside a busy softball field as well as giving a more desired location for pavilion rentals, near our recently updated playground.

Infra. Sales Tax: Yes
Project #: PJTP26059
Status: Requested

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: -
Project Need: -

Project Location

District 5
5895 Post Blvd, Lakewood Ranch

Description and Scope

The scope would be to hire a contractor that can install the Irrigation system based on the Irrigation plans already designed. Materials for the system could be obtained by the contractor or as owner-direct purchase if there is a savings to buy directly. The contractor would be responsible for the installation of Irrigation lines and equipment, testing and making sure it is operational, and restoring the grounds that are damaged during the process. Without an Irrigation system, conditions at the facility will never be at the level expected and moisture management is the key ingredient in providing high-level turf conditions, which will never be properly obtained without an in-ground irrigation system.

Rationale

This desired decision unit request is for the Premier Sports Campus Irrigation System. Premier Sports Campus is a high-end sports facility that welcomes local play and tournaments on a weekly basis. The main amenity the campus offers that draws people to the facility is the 75 acres of playing fields. These fields need to be in top condition to meet the expectations of the clients and that can be challenging given the fact that there is no in-ground irrigation system to water the fields to be able to provide the needed moisture to the grass. In FY23 funding was approved to do the design work for an irrigation system and the goal of this is to implement that design and install the irrigation system. Currently, there is an underground flooding system that is very inefficient, does not put moisture on the surface, and is very costly to operate given the high water bills we receive to run the water. An in-ground system would not be wasteful, apply the water where and when it is needed and pay for itself in savings from water bills.

Category: Sports & Leisure Services
Subcategory: Athletic Fields
Project Title: Lakewood Ranch Irrigation - Phase II
Department: Property Management
Project Mgr: Jeff Streitmatter
Infra. Sales Tax: -
Project #: PJTP26060
Status: Requested

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: -
Project Need: -

Project Location

District 5 5350 Lakewood Ranch Blvd, Bradenton

Description and Scope

The scope is for the contractor to finish the installation based on the design blueprints already developed. They will continue from phase 1 and install the remaining irrigation that was not installed in phase 1, which will be installed in the baseball and softball areas, as well as any work that could not be completed on the soccer fields due to the funding provided in FY25. This will complete the park and meet its irrigation needs for the next 30 years.

Rationale

Lakewood Ranch Park has an inefficient and outdated irrigation system that no longer provides the coverage, pressure, and ability to irrigate the fields. It needs replaced to provide effective irrigation and to maintain properly. In FY24, design work for a new irrigation system was approved and completed. In FY25, 1.5 million dollars was approved for irrigation installation. After design was completed, the quote for installation was received at 3.3 million dollars. In the summer of 2025, installation will begin with Phase 1, which consists of installing the pump system, mainlines, and soccer field irrigation. Phase 2 involves installation of the remaining irrigation system on the baseball/softball side of the park.

Category: Sports & Leisure Services
Subcategory: Parks & Aquatics
Project Title: Washington Park Phase I - Park Amenities
Department: Sports and Leisure Services
Project Mgr: Tom Yarger
Infra. Sales Tax: Yes
Project #: PJ6012611
Status: Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes
Project Need: Growth

Project Location

Multi-district 605 39th St E, Palmetto

Description and Scope

Construction of a playground, two pavilions, parking lot and other park amenities including sidewalks, bike racks, and landscaping. This is the first phase of a three phase project which includes design, permitting, and construction of playground equipment, parking lot, pavilion-restroom combination and a recreational trail. This includes a Community Development Block Grant (CDBG) approved for $600,001 towards construction of the playground, Shade structure, two picnic shelters, and restrooms as identified in the following projects: 6012618,6012619,6012620,6012621,6012622,6012623,6012624,6012625.

Rationale

The local community has been working for many years to convert this area in to a neighborhood park. This is the first phase of the Washington Park development. The Master Plan identifies the need to provide additional interpretive environmental recreation experiences.

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: Yes
Project Need: Other

Project Location

Multi-district
605 39th St E, Palmetto

Description and Scope

The project is located on County owned property that was historically used as a borrow-pit and roadway construction debris disposal. The only alternative to the proposed action is to not construct the park. This parcel was initially developed as a golf course that served the community until US 41 divided the neighborhood in half. The surrounding communities have asked for a park at this location and would be disappointed if one could not be developed on this site.

Rationale

The purpose of the project is to construct a public park for the residents of Manatee County. This proposed park is located in one of the County's target areas and will provide recreational facilities for the surrounding low to moderate income communities. This involves the construction of an approximately 11.5-acre park on County owned property located near the intersection of 30th Street East and 8th Avenue East in Palmetto. The park elements include but are not limited to shell trails, playground, play field, pavilions, restrooms, parking, and stormwater ponds.

Project Title: John H. Marble Park - Facility Retro Fit Phase I
Department: Sports and Leisure Services
Project Mgr: Tom Yarger
Infra. Sales Tax: Yes
Project #: PJ6031103 **Status:** Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: - Project Need: Growth

Project Location

District 2 3675 53rd Ave E, Bradenton

Description and Scope

Reconstruct existing pool deck and tie-into the new facility decking and construct a picnic pavilion.

Rationale

John Marble facility has deteriorated over the years. The county took ownership of the facility in the mid 1990's. The park requires significant infrastructure upgrades and facility replacement. The upgrade to this facility will enable the county to provide after-school and health and wellness programming that was offered by the YMCA, but was discontinued due to the economic downturn.

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: - Project Need: Other

Project Location

District 2 3675 53rd Ave E, Bradenton

Description and Scope

Design and construct necessary off-site roadway improvements required by Manatee County Public Works Transportation. Roadway improvements to provide a widened road with new turn-lanes are required due to the increase to the facility building size and parking lot, and to reduce vehicular stacking at the intersection of State Road 70 and 37th Street East to enter or exit the parking lot. To design this off-site work as required by Manatee County during the Pre-Application meeting, additional scope was required; civil engineering, traffic engineering, topographic surveying and sub-surface utility surveying.

Rationale

Roadway improvements are required due to the increase of the facility building size and parking lot.

LOS/Concurrency: -
Project Need: Deficiency

Project Location

District 2 3675 53rd Ave E, Bradenton

Description and Scope

Replace the pump room at John H Marble park and add additional safety features.

Rationale

The John H Marble facility had deteriorated over the years. The County took ownership in the mid 1990's. The John H Marble Pool Pump Room is showing extreme signs of age, deterioriation and safety concerns. The opening of a new facility without an updated and safe operational pump room will cause a need for future improvements and repairs expenses.

Project Need: Growth

Project Location

District 4 7101 Cortez Rd, Bradenton

Description and Scope

Develop land complete with access roads, walking path, pavilion, playground, dog park, restroom, shade structures to last at minimum 5-8 years, parking, drive isles, area for a preserve, security lighting, lightning protection, and all appurtenances necessary to be a functioning park for recreational activities. This project is for the dog park and fencing around the park.

Rationale

March 22, 2001 Manatee County engaged in a lease with the State of Florida for a 30 year term with a 20 year extension for 40.01 acres of land on 66th street. This land has yet to be developed. With the growth in the area including new developments, Lake Flores and Aqua by the bay driving additional residents and families, we would like to develop this land as a safe location for a passive park to bring an opportunity to the local residents to have a park close to their homes and make use of these 40 acres to serve our residents and guests.

Project Title: 66th Street Park - Restroom
Department: Sports and Leisure Services
Project Mgr: David Arbaelez Montoya
Infra. Sales Tax: -
Project #: PJ6040125
Status: Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes
Project Need: Growth

Project Location

District 4 7101 Cortez Rd, Bradenton

Description and Scope

Develop land complete with access roads, walking path, pavilion, playground, dog park, restroom, shade structures to last at minimum 5-8 years, parking, drive isles, area for a preserve, security lighting, lightning protection, and all appurtenances necessary to be a functioning park for recreational activities. This project is for the restroom.

Rationale

March 22, 2001 Manatee County engaged in a lease with the State of Florida for a 30 year term with a 20 year extension for 40.01 acres of land on 66th street. This land has yet to be developed. With the growth in the area including new developments, Lake Flores and Aqua by the bay driving additional residents and families, we would like to develop this land as a safe location for a passive park to bring an opportunity to the local residents to have a park close to their homes and make use of these 40 acres to serve our residents and guests.

Project Mgr: Tom Yarger
Infra. Sales Tax: -
Project #: PJ6048905 **Status:** Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes Project Need: Growth, Other

Project Location

District 2 400 Cypress Creek Blvd, Bradenton 34208

Description and Scope

Design, permit and construct the following amenities per the FCT Management Plan: Amphitheater or hook up for Amphitheater, built in seating and small stage area for a portable screen; possible future add-ons include covered seating and lighting; other appurtenances and FF&E.

Rationale

Manatee County's Bennett Park is a Florida Communities Trust (FCT) grant project site that is not fully developed as required by the Special Management Conditions and Management Plan. Although many amenities that are cited in the Management Plan have been implemented and enjoyed by the community, there are still three amenities that need to be built in order to fulfill Manatee County's obligation to FCT.

Project Title: Hidden Harbor (Fort Hamer East of New Bridge)
Department: Sports and Leisure Services
Project Mgr: Tom Yarger
Infra. Sales Tax: Yes
Project #: PJ6067406 **Status:** Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes Project Need: Growth

Project Location

District 1 Hidden Harbor, Parrish

Description and Scope

Development/construction to include stormwater improvements; landscaping and irrigation; utilities; entry and circulation road; maintenance access shell drive; entrance sign; parking lot (+/-50 spaces); up to 3 pavilions which should include picnic tables, electrical service and lightning protection; restrooms; fishing/nature observation pier with boardwalk; interpretive signs; site amenities; sidewalks connecting recreational amenities; multi-use nature trail (+/- 2.8 miles) with trail benches and shelters with lightning protection, bike racks, and trash receptacles; exotic plant removal and site work and stormwater ponds; ADA-compliant playground with safety surfacing; shade canopy; up to 3 sand volleyball courts; skate park and pump track; south road extension with approx. 5-space shell parking with a kayak launch facility at Ft Hamer Bridge/Manatee River; FF&E; open play field area for future development to include a performance pavilion with festival infrastructure and shaded shelter.

Rationale

These park elements are either a requirement of the Florida Communities Trust (FCT) grant award agreement or necessary to make the park accessible to the public and expand their recreational opportunities.

Department: Sports and Leisure Services
Project Mgr: Tom Yarger
Infra. Sales Tax: Yes
Project #: PJ6105800
Status: Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes
Project Need: Growth

Project Location

District 1 12214 US 301 N, Parrish

Description and Scope

Plan, design and construct a park to include a performance pavilion, picnic pavilions, restrooms, parking, walking trails, 20 fitness stations with equipment, boardwalk in wetland and observation platforms, festival seating infrastructure, innovative design park playground for youth and adults, splash pad, site grading and prep, landscaping/turf irrigation, field electrical outlets. Successfully negotiate the land swap/purchase of the Florida Department of Transportation (FDOT) owned property in Parrish (adjacent to the County owned property) for the Parrish Community Park.

Rationale

The Parrish community has expressed interest in adding a large community gathering shelter and grounds for recreation and community events to be paired with Ft. Hamer Road. This project will include the development of the festival grounds with multiple partners and several public/private partnerships.

Project Title:	Lakewood Ranch Parking Expansion		
Department:	Sports and Leisure Services		
Project Mgr:	Tom Yarger		
Infra. Sales Tax:	Yes		
Project #:	PJ6108403	**Status:**	Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes Project Need: Growth

Project Location

District 5 5350 Lakewood Ranch Blvd, Lakewood Ranch

Description and Scope

An additional parking plan will be developed to encompass the areas most frequently used for overflow parking, with structured, low-maintenance asphalt or another approved base, proper lighting, and effective drainage. All other appurtenances as needed for a functional facility.

Rationale

Lakewood Ranch Park is rapidly becoming the recreational hub on the East side of the County, hosting over 27,000 hours of scheduled athletic play between June 2023 and May 2024. Forty percent of these scheduled hours are allocated to our soccer and football fields. The identified needs include additional fields, improved irrigation, and enhanced parking facilities. Including are all appetences needed for a fully functioning facility. To address these requirements, we propose leveling and surfacing currently used parking areas with gravel, along with designing more efficient parking layouts to maximize space and enhance safety. This initiative will focus on areas such as softball, T-ball, basketball, and soccer/football. Additionally, to increase parking capacity on the park's south side, we plan to repurpose underutilized handball courts into additional parking spaces for pickleball/tennis and overflow soccer parking. A prefabricated restroom facility will also be installed in this area. Furthermore, crucial to our goals is the implementation of a comprehensive irrigation and drainage system across the entire park to ensure effective water management. Finally, to meet the growing demand for field space, we aim to install two regulation-size turf soccer fields for year-round and extended play.

Project #: PJ6116906 **Status:** Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes Project Need: Growth

Project Location

District 3 808 75th Street NW, Bradenton

Description and Scope

Design, permit, site preparation, and construction of 4 pickleball courts at King Middle School Neighborhood Park with shade structures and other appurtenances for a functional pickleball amenity.

Rationale

There has been a formal request for a neighborhood park next to King Middle School. Currently there are tennis courts on this property that are in disrepair. These tennis courts will be removed and replaced by the Neighborhood Park. This request is to add 4 pickleball courts and shade structures.

Subcategory: Parks & Aquatics
Project Title: Lakewood Ranch Park Improvements
Department: Sports and Leisure Services
Project Mgr: Tom Yarger
Infra. Sales Tax: Yes
Project #: PJNR01778
Status: Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes
Project Need: Growth

Project Location

District 5 5350 Lakewood Ranch Blvd, Bradenton

Description and Scope

Establishment of a Lakewood Ranch Park Master Plan will provide the structure for development of several phases. Phases will include lighting, ADA restroom, removal of existing handball courts and replacement with pickleball courts, and dog park. Additional LED lighting will provide for a more efficient cost effective way for lighting soccer fields. An additional ADA restroom closer to the soccer fields is planned. A destination playground will be included in the overall concept. However, it is recognized within the different category of Recreational Buildings & Playgrounds (NR01492).

Rationale

Lakewood Ranch Youth Soccer Club and soccer in general have grown to a point that additional field lighting is required in order to avoid temporary lighting solutions that aggravate neighboring communities. The LED lighting will provide for a more efficient cost effective way for lighting the soccer fields. An additional ADA restroom closer to the soccer fields is needed to accommodate park patrons with disabilities. Tennis and handball courts have reached their life-cycle and will be replaced with pickleball. An additional dog park is needed in the area to provide for a safe environment where park patrons can bring their dogs.

Infra. Sales Tax: Yes
Project #: PJTP26054
Status: Requested

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: Yes
Project Need: Deficiency

Project Location

District 3 2811 51st St. W. Bradenton

Description and Scope

Purchase & Install 4 Permanent Light Towers with outlets, 3 outlets and add Lighting plus outlets in 4 existing pavilions in 51st St Park
•Capital to fund addition - $ 296,872.75

Rationale

Events in 51st St Park have exponentially grown in frequency including signature events and large permitted events. The lack of lighting is a burden to collect and place light towers from Property Management, Utilities and Public Works, as well as a potential safety concern if not a sufficient amount are available. There is one light tower near the entrance and none along the drive, playground, trails, or four pavilions. With GT Bray 51st ST Park having amenities including the amphitheater, it is a desirable location that could be used more often if lighting and more electricity was available.

Project #: PJ5400017
Status: Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: -
Project Need: Maintenance

Project Location

District 2 3675 53rd Ave E, Bradenton

Description and Scope

Parking lot demolition, reconstruction and expansion to replace existing parking lot.

Rationale

John Marble facility has deteriorated over the years. The county took ownership of the facility in the mid 1990's. The park requires significant infrastructure upgrades and facility replacement. The upgrade to this facility will enable the county to provide after-school and health and wellness programming that was offered by the YMCA, but was discontinued due to the economic downturn. Adding an additional pavilion with a restroom facility will increase pavilion rental capacity and add a needed restroom facility by the current and future pavilion.

Project Title: Premier Sports and County Service Center & Improvements
Department: Sports and Leisure Services
Project Mgr: Tom Yarger
Infra. Sales Tax: -
Project #: PJ6093301 **Status:** Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes Project Need: Growth

Project Location

District 5 5895 Post Blvd, Bradenton

Description and Scope

Creation of an overall site plan for the entire 200 +/- acre County property which could include potential enhancements to the existing Premier Sports Complex, a new East County District park, library and a County Services Center. The site plan is to ensure the proposed uses complement each other, fit on the site and take advantage of potential shared infrastructure opportunities (e.g., stormwater, parking, maintenance facilities, etc.) to maximize the efficiency of the site. The plan will include construction of a portion of the recreation amenities.

Rationale

In a Board work session in FY18, County Administration identified the need for additional facilities in East County to provide services to area residents. The Board and voter approved Infrastructure Sales Tax committed monies for an East County library. The 127 acre Premier Sports Complex was acquired by the County in FY18. An additional 75 acres on the north side of Premier was approved by the Board and for purchase by the County in FY18 to facilitate this new County complex. A site plan is necessary to inform stakeholders, begin the financial planning and permitting process. The site plan will include a phasing plan as it may take many years to construct these facilities.

Project Location

District 5 5895 Post Blvd, Bradenton

Description and Scope

Design and construction and setup of an engineered foundation for a versatile permanent tent, designed for meetings, registration, dining, and EMT/training purposes. The project encompasses climate-controlled area, prefab restroom facilities, small emergency backup generator, enhancements to the parking lot including signage and lighting, water/sewage infrastructure, electrical connections to the tent and restrooms, and fire suppression extinguishers. Other appurtenances as required for a functional facility.

Rationale

To be competitive with other major sports tourism facilities in Florida, traveling tournament teams require restrooms, storage, meeting and organizational space. This project would fulfill the requests made by our clients that bring in large signature tournaments to our county that helps sustain tourism year-round. These enhancements would help support the hospitality industry, and appeal to residents since events also include local athletes. The project would also add an additional revenue stream for our operation.

LOS/Concurrency: -
Project Need: Growth

Project Location

District 5 5895 Post Blvd, Bradenton

Description and Scope

Design and build out for a 200 space remote parking lot to be designed, permitted, and constructed ahead of the future planned park on the Premier Sports Complex property. This will include a topographic and tree survey for 200 space parking lot to be performed separate of the future planned park. Site lighting is also included for freestanding electrical services not conducive for natural gas utilities.

Rationale

Property Management requested the new remote parking lot to be designed and constructed through a change order to the contractor currently designing and building the new East County Library. This will produce construction mobilization savings by using the same contractor rather than waiting on the future park build out with another contractor.

Project #: PJ6093306
Status: Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: -
Project Need: Growth

Project Location

District 5 5895 Post Blvd, Bradenton

Description and Scope

Construct up to 24 pickleball courts, and cover at least up to 10 courts, contingent on the design professionals. Construct a small administration office, with restrooms and the capability to operate a membership based racket facility and aquatics center with fee paying members checking in to use the courts and pool. Lighting, fencing, seating, water fountains, landscaping, sidewalks, a marquee and FF&E are also needed. A shade structure with fans and lighting over at least 10 of the pickleball pods is desired contingent on the design professionals.

Rationale

Premier Recreation Complex adjacent to the Premier Sports Complex. This racket center was envisioned to have a small admin office to accommodate registration of players. The full recreation center was to provide a central building access point providing entry access to recreation rooms for camps, exercise fitness and other social events, a basketball gymnasium and a pass-through entry access point to the competitive swimming pool aquatics center. Other Premier recreation campus amenities included multi-sport athletic fields, a concert or festival event stage and gathering lawn, a dog park and a skate park, and clay and hard tennis courts.

Category: Sports & Leisure Services **Subcategory:** Recreational Buildings & Playgrounds
Project Title: Blackstone Park Upgrades - Synthetic Multi Purpose Soccer Field #1
Department: Sports and Leisure Services
Project Mgr: John Eib
Infra. Sales Tax: -
Project #: PJ6118979 **Status:** Requested

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes Project Need: Growth

Project Location

District 2 2112 14th Ave W Palmetto

Description and Scope

Construction and installation multi-purpose synthetic turf field to be built on the Blackstone Park Sport Complex near 14th Ave W. The project will include site work, field grading, survey, irrigation, and amenities required for functional multipurpose fields.

Rationale

Blackstone Park is a highly used facility for athletic league play. We have a good amount of adult league play at this park, which can do significantly more damage to the fields than youth play. With over 1,000 hours of scheduled play on these fields, long standing city water use limitations, and the considerable amount of adult play, the fields are mainly dirt by the end of the season. End of season field conditions suggest field replacement at a cost of roughly $140K annually. However, due to budget limitations and having to spread sod funding throughout county, we have only been able to spot fill areas with about $11K-$30K each year. In addition to this treatment, we also close down the fields for 2-3 months to let the sod regrow. Closing down the fields and limiting play is never popular, but the only way to successfully regrow what is lost every season. However, given all the factors mentioned, even after the 2 month break, it takes less than 2 months for the fields to return to poor conditions. (refer to images). Turf would mitigate the irrigation issues, require less maintenance annually, and remove sod issues.

MANATEE COUNTY GOVERNMENT
Capital Improvement Plan
FY2026 - FY2030

Category: Sports & Leisure Services
Subcategory: Recreational Buildings & Playgrounds
Project Title: Blackstone Park Upgrades - New Pavilion
Department: Sports and Leisure Services
Project Mgr: John Eib
Infra. Sales Tax: Yes
Project #: PJTP26052
Status: Requested

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: Yes
Project Need: Deficiency

Project Location

District 2 2112 14th Ave. W. Palmetto

Description and Scope

Demo existing softball pavilion and prepare ground for installation of 2 standard softball batting cages with necessary lighting. By playground area, level selected area and grade properly to prepare for installation of new pavilion . New pavilion should be similar to existing playground pavilion (seats 40 people). Power source for lights. Install necessary seating.

Rationale

Blackstone Softball fields saw 5,230 hours of scheduled athletic play from January 2023 to December 2024 with 1,300 total reservations. There has been history of conflict between the pavilion users with the softball players due to the proximity to the softball field. We would like to remove the softball pavilion and replace with softball batting cages. Blackstone softball is the only softball complex at our large athletic facilities that does not have softball batting cages adjacent to their fields. Lastly, we are looking to install a second playground pavilion. This will allow pavilion rentals to continue without the disturbance of being beside a busy softball field as well as giving a more desired location for pavilion rentals, near our recently updated playground.

Status: Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: -
Project Need: Maintenance, Growth

Project Location

Countywide 2101 47th Terr E, Bradenton

Description and Scope

Provide an Emergency Services IP Network (ESInet) for 9-1-1 call routing. Assess and correct all GIS data for addressing errors within Manatee County to the National Emergency Number Association (NENA) i3 standards. Upgrade existing Telecommunicator furniture to larger work stations to handle additional CAD and call monitoring screens associated with Next Generation 911 data. Upgrade to existing 9-1-1 capable call handling equipment known as Vesta as technology advances occur for i3 NENA standards.

Rationale

The legacy infrastructure provided by the Local Exchange Carrier (LEC) Frontier is being phased out. Copper phone lines are at end of life and no longer serviceable due to aging technology. In addition, Manatee County upgraded its 9-1-1 call equipment to accept Next Generation 9-1-1 ESINet call routing in 2015.
Trends in personal communications technologies are accelerating the obsolescence of the current 9-1-1 system. The current circuit-switched infrastructure of the 9-1-1 network cannot receive digital data (e.g. text messages, photographs, and video) from the communications devices commonly used by the public. Because these outmoded networks cannot provide the public with access to 9-1-1 services from newer technologies and devices, 9-1-1 networks and call centers must change.

Status: Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: -
Project Need: Growth

Project Location

Countywide 2101 47th Terrace East, Bradenton 34203

Description and Scope

Currently ambulance movement is controlled by policy and 911 dispatchers. This leaves room for human error and inconsistent application of the policy. Additionally EMS has no way to measure the impact of ambulance movements or additions except for historical data comparison. Adam will allow to look forward and identify the best locations to place ambulances to meet local, state, and federal response time standards.

Rationale

Deccan Livemum (Move up Manager) and Adam (Apparatus Deployment Analysis Module) both work Interactively with the Computer Aided Dispatch(CAD) System. Livemum identifies real-time gaps in EMS coverage across the County and recommends movement of ambulance resources to effectively supply emergency services to the public. Livemum streamlines situational awareness and provides consistent direction for 911 Staff and field personnel following rules input by the organization. Adam allows for analysis of moving existing ambulance/station resources and/or adding a resource. Utilizing historical CAD data it is able to show the impact of the changes or additions.

Project Title: CAD upgrade to Hexagon On-CALL
Department: Public Safety
Project Mgr: -
Infra. Sales Tax: -
Project #: PJTP26048
Status: Requested

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: -
Project Need: Maintenance

Project Location

Countywide 2101 47th Terrace East, Bradenton

Description and Scope

Discussions with Hexagon, and related vendors, for the acquisition and implementation of the Hexagon OnCall On-Prem product. This project would encompass the licensing, software and professional services required to implement the new system in accordance with a Statement of Work (SOW) to be executed under the auspices of an existing Master Agreement with Hexagon. Deliverables within the SOW would be based upon the county's acceptance of project milestones, leading up to a determination (in the county's sole discretion) that the system is ready for production release (Go-Live).

Rationale

Manatee County Public Safety current computer aided dispatch (CAD) system requires regular upgrade and replacement every 5+ years to stay current with technology, security, software, hardware and performance. Upgrading to the next Hexagon computer aided dispatch (CAD) version, "OnCall" offers a modern architecture, streamlined administration and flexibility in configuration and customization. It is built using a modern services-based approach to mapping. It can leverage geospatial services to handle most map-based tasks, such as map rendering, geocoding and routing.

Project Need: Other

Project Location

District 3 5718 21st Ave W, Bradenton

Description and Scope

The new Bishop Animal Shelter design and construction will be completed in two phases. Phase 1 will include procurement of prefab kennels, design review and constructability review of the kennels and necessary sitework required, permitting, and the purchase of long lead items required to complete the project. Phase 1 will also include a temporary trailer for animal adoptions to be used until the animal adoption building (Phase II) has been completed.

Rationale

To meet the growing demands of Animal Services, Manatee County needs to increase the capacity to house animals that do not have permanent homes. This project will be completed in two phases
in order to meet the needs of the community and animal welfare.

Project Location

District 2 2101 47th Ter E., Bradenton

Description and Scope

Phase 2 includes provision and installation of two (2) new 480 Volt UPS systems with total redundancy, per request of PSC and PMD staff for maintenance and testing. This proposal also includes all the electrical work required for installation of the of the UPS systems and new panel UPS-DPA to handle the new redundancy.

Rationale

Phase II of the Replacement of the UPS equipment at the Public Safety Center will allow for the building to become fully redundant prior to next hurricane season. At this time, equipment is being rented, but this would provide a permanent solution.

Status: Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: Yes
Project Need: Deficiency

Project Location

District 5 6615 Greenbrook Blvd, Lakewood Ranch

Description and Scope

Purchasing a 1250 KW permanent generator and two 2,500 gallon fuel tanks to be connected to the current Special Needs Shelter at Nolan Middle School. Connections are already in place due to the rental generator currently used.

Rationale

In order to meet the special needs of persons who need assistance during evacuations and sheltering because of physical, mental, or other disabilities, Emergency Management maintains a registry of such persons and, in coordination with the Department of Health in Manatee County, opens a Special Needs Shelter. This shelter is required to have accommodations to full power throughout the shelter. This requirement gives way to the need of a generator which is large enough to provide that power to the building. Currently, the Emergency Management Program contracts a rental agreement for delivery and setup of a generator at $92,560 annual cost plus additional costs for each activation.

Category: Public Safety Category **Subcategory:** Building and Renovations
Project Title: PSD Emergency Medical Services Logistics Facility
Department: Public Safety
Project Mgr: Jeff Anthony
Infra. Sales Tax: -
Project #: PJ6117300 **Status:** Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes Project Need: Growth, Other

Project Location

District 2 Vicinity of Public Safety Center, Bradenton

Description and Scope

The desired solution includes utilizing the land located at the Public Safety Center designing, permitting, and constructing a new Logistics Storage Facility/Warehouse Building between 17,500-20,000 square feet in Phase II of the EOC Plans. The facility would need to meet the functional needs and increased demands of the Public Safety Department, including the Emergency Medical Services, Emergency Management, Beach Patrol, and Code Enforcement Divisions. Includes all appurtenances required for a functional facility.

Rationale

The Department of Public Safety has requested a dedicated logistics facility for public safety operations, including emergency management, emergency medical services, beach patrol, and code enforcement. The current space utilized is 10,000 square feet. Emergency planning and response have been enhanced through better coordination and communication among agencies, increased use of technology, risk reduction measures, stakeholder partnerships, and improved training and exercises. Since the project was initially submitted, there have been significant additions to the EMS fleet, including 5 BLS units and 1 ALS unit. The department has also added over 40 full-time equivalent (FTE) positions. Through the Capital Improvement Process, the Board of County Commissioners approved several ambulance additions, including four BLS ambulances and three ALS ambulances, to meet the community's increasing demand. These additions increase the total daily frontline ambulances to 28, all requiring state-mandated medical supplies to be delivered daily. Furthermore, multiple stations have been approved for construction on the County's Capital Improvement Plan (CIP) over the next five years, demonstrating a continued commitment to expanding and improving public safety infrastructure while meeting a growing demand. To support the increasing EMS fleet, stations, and public safety employees, it has been determined that the original project no longer meets the needs. This is especially evident when considering the additional requirements for code enforcement, beach patrol, and water safety staff and equipment. The expanded scope of operations across all these public safety divisions necessitates a larger, more comprehensive logistics facility to efficiently manage and support the growing workforce, fleet, and equipment inventory. The growth in code enforcement activities, increased beach patrol responsibilities, and enhanced water safety measures have all contributed to the need for a more expansive and adaptable logistics solution. This facility must now accommodate the expanded EMS operations and the storage, maintenance, and distribution of equipment and supplies for these additional public safety functions, underscoring the critical need for a revised and expanded logistics facility project.

Status: Requested

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes
Project Need: Growth, Deficiency

Project Location

District 2 1022 26th Ave E., Bradenton

Description and Scope

Remodel of approx. 20,000 sq. ft. of a 30,000 sq. ft. single-story building at 1022 26th Ave East, Bradenton, FL. The building will support a transitional housing and outreach program run by the Manatee County Sheriff's Office. It will feature intake, admin., housing pods, counseling and case management offices, restrooms, showers, laundry, storage, kitchen/dining areas, and outdoor spaces. Security and phased construction are key to the plan. The project will proceed in two phases to expedite opening and begin serving those
experiencing homelessness as soon as safely possible. Phase 1 will remodel approx. 6,000 sq. ft.

Rationale

The Fresh Start project is a critical initiative to address the homelessness crisis in Manatee County. Our area has struggled to meet the needs of its homeless population, especially for overnight shelter. This proposal outlines a 24-hour facility offering a safe, supportive space for individuals experiencing homelessness. It also provides diversion options for the Manatee County Sheriff's Office (MCSO), reducing unnecessary justice involvement. The plan follows House Bill 1365 guidelines and involves renovating an existing county office building on 26th Avenue East in Bradenton.

Project Title: Remodeling of the EMS Logistics Location at the Public Safety Complex
Department: Public Safety
Project Mgr: -
Infra. Sales Tax: -
Project #: PJTP26049 **Status:** Requested

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: - Project Need: Growth

Project Location

District 2 2101 47th Terrace East Bradenton

Description and Scope

The EMS logistics team and supplies will move to a new building near the Public Safety Complex. Once relocated, remodeling their current space for the growing code enforcement division will improve efficiency and support future growth. The remodel will include storage areas, a conference room for 30, 12 workstations, 4 administrative offices, 4 lieutenant offices, a chief's office, a small kitchen with a sink and refrigerator, and, if possible, separate men's and women's bathrooms.

Rationale

As the scope and demands of code enforcement expand, it is clear that our current location no longer meets our needs. Relocating to a larger facility will improve the effectiveness of operations, boost staff productivity, and enhance service to the public. The current office layout is not flexible enough to accommodate a growing team. A larger space would provide room for additional staff, enable better organization of workstations, and allow for designated areas to address the various aspects of code enforcement more efficiently.

Project Mgr: Tom Yarger
Infra. Sales Tax: Yes
Project #: PJ6005233
Status: Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: -
Project Need: Growth, Deficiency

Project Location

District 1 14470 Harlee Rd, Palmetto

Description and Scope

If it is not possible to add a second story, it may be necessary to build a wing onto the east end of the building to accommodate additional medical bed space. At the Female Pod/G-1 end of the building, there is the capability to allow for expansion. Any new facility on the current Jail compound would be acceptable.

Rationale

The original POD was built for a bed capacity of 24; our normal medical population is 50 to 60 inmates. The original 1995 building plan for only 24 medical beds was an oversight, based on a jail population of 600. Currently the jail population is between 950 and 1,050 inmates. Additionally, we need to create a mental health ward. There are increasing numbers of inmates with mental health issues, drug abuse and detox needs. Inmates threatening, or indicating attempting suicide are housed in with the medical POD inmates. When juvenile females are brought to jail, they must be housed in Medical because we do not have bed space for them to house them separately from adult inmates as required.

Multi-district TBD

Description and Scope

Identify and secure a suitable location for the EMS Base in the University Parkway and I-75 area, ensuring accessibility and proximity to high-traffic zones. Design and construct dormitories to accommodate EMS personnel, ensuring round-the-clock availability. Include a fully equipped kitchen for staff, restrooms, shower facilities, and recreational areas to ensure the well-being and efficiency of on-duty personnel. Construct a garage with adequate bay space to house and maintain ambulances, ensuring their readiness for prompt deployment. Create specialized storage areas equipped to securely house and maintain specialized medical equipment necessary for emergency responses.

Rationale

Upon approval and completion of the EMS base station build-out in South Manatee County, it has become evident that an ambulance addition is necessary with a 10.51 average response time. Currently, the absence of a dedicated location to house additional resources, particularly ambulances, presents a significant challenge in expanding emergency medical services. The EMS Base aims to enhance services and meet the growing demands of South Manatee County, ensuring efficient and timely responses to emergencies in the region.

Project Location

Multi-district
Harley Rd, Bradenton

Description and Scope

Design a functional and cost-effective EMS Station layout that accommodates a minimum of 2 Ambulances. To ensure the continuous operation of the EMS Station, it is essential to allocate appropriate staffing resources. This includes hiring qualified EMS personnel (8 FTEs) to operate the ambulance (1 Ambulance) and provide emergency medical care.

Rationale

The Port Area in Manatee County has been experiencing an increase in traffic and demand for emergency services. This is especially challenging due to the proximity of the county jail, which creates complex emergency response dynamics. This has caused potential delays in emergency response times, which is particularly concerning for the New "Fresh Start Manatee" project. This project is expected to serve a diverse client population, including incarcerated, homeless, and disenfranchised individuals. To address these challenges, there is an urgent need for dedicated EMS Sub Stations to be established in the area. These stations would not only mitigate risks associated with increased traffic congestion but also cater to the unique demands of the surrounding community, ensuring timely access to critical emergency services for all residents. The establishment of a centralized hub for emergency responders would vastly improve operational efficiency and resource allocation. It would enable quicker dispatch and seamless coordination of resources to effectively address emergencies, including those arising from the incarcerated, homeless, and disenfranchised segments of the population. Moreover, the presence of these facilities would serve as a visible and reassuring beacon within the community, bolstering public safety and enhancing overall well-being for residents.

Project Location

District 4 TBD

Description and Scope

Design a functional and cost-effective EMS and sheriff Sub Station layout that accommodates both Ambulance and Sheriff Operational Needs. To ensure the continuous operation of the combined EMS and Sheriff Sub Station, it is essential to allocate appropriate staffing resources. This includes hiring qualified EMS personnel (8 FTEs) to operate the ambulance (1 Ambulance) and provide emergency medical care, as well as assigning dedicated Sheriff deputies to oversee law enforcement duties within the facility. In addition, it is important to provide adequate vehicle resources to support the operations of the combined station, including the ambulance for emergency medical responses and patrol vehicles for law enforcement activities.

Rationale

The Southwest TIF area is experiencing increasing traffic congestion, which is causing potential delays in emergency response times. There is an urgent need to establish dedicated EMS and Sheriff Sub Stations to mitigate these risks and ensure timely access to critical emergency services. A centralized hub for emergency responders would improve operational efficiency and resource allocation, enabling quicker dispatch and coordination of resources to effectively address emergencies. The presence of these facilities in the Southwest TIF would also serve as a visible and reassuring presence within the community, contributing to overall public safety and well-being.

Description and Scope

A functional and cost-effective layout for the EMS and Sheriff Sub Station will be designed to accommodate both ambulance and Sheriff operational needs. Staffing and Vehicle Allocation: To ensure continuous operation of the combined EMS and Sheriff Sub Station, it is essential to allocate appropriate staffing resources. This includes hiring qualified EMS personnel (8 FTEs) to operate the ambulance (1 Ambulance) and provide emergency medical care, as well as assigning dedicated Sheriff deputies to oversee law enforcement duties within the facility. Additionally, adequate vehicle resources will be provided to support the operations of the combined station, including the ambulance for emergency medical responses and patrol vehicles for law enforcement activities.

Rationale

The North River area, along with the greater Parrish region, is facing an escalating traffic problem, which is made worse by significant development and upcoming residential areas in North County. This emphasizes the pressing need for dedicated EMS and Sheriff Sub Stations. These stations would serve as essential centralized hubs for emergency responders, reducing risks and ensuring quick access to critical services. By enhancing operational efficiency and resource allocation, they would enable faster dispatch and coordination of resources during emergencies. Additionally, their presence would not only improve public safety but also provide a visible and reassuring presence within the community, contributing to overall well-being.

Project Need: Deficiency

Project Location

Countywide 2101 47th Terrace E, Bradenton

Description and Scope

Engage with the CAD Locution Server to implement the Locution Station Alerting System, which will bring advanced station alerting capabilities and emergency dispatch automation. The Locution server will connect to the new OnCall CAD system and connect via a closed public safety network to all EMS stations. The scope of this project is limited to the Locution server and its capabilities only for Manatee EMS stations.

Rationale

Existing EMS Station alerting systems is end of life, the new Locution Alerting System will replace and enhance current dated system. The scope of this project is limited to the Locution servers and components only for Manatee County EMS, additional compatible Locution receiving devices are at the discretion of fire stations/districts. Locution roughly estimates $40,000 per station (17 Stations for 20 Ambulances, totaling $680,000) to provide reliable alerting that is compatible with NFPA22l.

Project Need: Growth

Project Location

District 2 5034 US 301 N, Ellenton

Description and Scope

The rehabilitation project will focus on optimizing space, alleviating the space concern in the current trailer, and ensuring efficient operations. Additionally, the Annex will accommodate a District Supervisor, enhancing management and oversight of EMS services. Currently, the Supervisor is working out of a storage closet with a water heater. Rehabilitating the Annex will also improve safety and functionality, ensuring a safe and functional living environment for EMS personnel and resolving the foundation problems in the current trailer.

Rationale

The vacant BADS Annex, conveniently situated on the same property, has been identified for EMS utilization. This strategic decision involves transforming the annex into EMS's primary station, aiming to provide a significantly safer and more secure environment for the two ambulance crews and their supervisor. This transition serves as a solution to the safety concerns attributed to the trailer's structural issues. Not only will this upgrade mitigate potential hazards, but it will also ensures EMS's ability to consistently deliver services to community.

Description and Scope

These improvements will support the 24/7, 365-day operation of the ambulances. The rehabilitation project will focus on optimizing space, creating ample room for the placement of two ambulances.

Rationale

EMS Station 6, located at 5034 US 301 North, was originally designed to host a single ambulance crew of three employees. However, due to increased demands, the station now accommodates two ambulance crews, comprising a total of six employees, along with a supervisor, making it a total of seven employees working there daily. To address these issues, the vacant BADS Annex, conveniently situated on the same property, has been identified for EMS utilization. This strategic decision involves transforming the parking area, creating room for the placement of two ambulances.

Project Title: EMS - AMBUbus Mass Patient Evacuation Unit (Bus Ambulance)
Department: Public Safety
Project Mgr: James Crutchfield
Infra. Sales Tax: -
Project #: PJ6100000 **Status:** Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes Project Need: Growth

Project Location

Countywide Countywide

Description and Scope

This bus will be dispatched on all levels of mass casualty incidents (Levels 1-5) which takes the place of approximately three to eight ambulances. The AMBUbus is outfitted to transport 12 stretcher patients and 16 seated patients. The AMBUbus is deployed with a crew of six (current FTEs) which include an apparatus operator, command position, and four care providers. Additionally, this asset will be utilized to provide rehabilitation for fire fighters at the location of fires or other events. This asset can also be utilized to evacuate large facilities such as nursing homes, assisted living facilities, and hospitals should a life threatening event or disaster occur.

Rationale

As our community continues to grow, so does the demand on our 911 system. Incidents where a large number of patients exist become taxing to our 9-1-1-system and slows our service delivery to emergency calls for service during these times. In the last two years, there were 70 incidents where three or more ambulances were assigned to one event. Additionally, it will be used to rehabilitate firefighters during structure fires. Lastly, we learned from Hurricanes Irma and Harvey that there is a critical need to move large amounts of patients from facilities such as skilled nursing facilities, assisted living facilities, and hospitals. An AMBUbus is the proposed solution to this challenge.

Status: Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: -
Project Need: Growth

Project Location

District 1 11721 69th St E, Parrish

Description and Scope

Existing EMS Station 20 (Parrish Fire 12132 US 301 N. Parrish FL 34219) will be relocated to this facility, with room for future planned expansion. Certain internal renovations will be required to retrofit the existing facility to house EMS operations. Property Management will manage all construction renovation activities to include a parking pad for employee personal vehicles, covered parking for at least two ambulances and a supervisor vehicle, inside renovations for crew rest areas, office space and medical equipment/medication storage.

Rationale

Northern Manatee County has experienced a significant growth in population due to an increase in approved residential housing. The current service area for Northern Manatee County is covered by one Ambulance (Alpha 20), which is housed at Parrish Fire Department. The North County EMS Base will provide service coverage to Parrish both East of Highway 301 and North of State Rd 675. There are several approved new residential and commercial developments that will increase the future demand for EMS services. For this reason, it will become necessary to obtain space to add additional ambulances to this area of the County, and to ensure current level of service remains uninterrupted.

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: -
Project Need: Growth

Project Location

District 1 Parrish Fire District Station 2 (Rutland Road/Rye Road)

Description and Scope

To meet the growing demand for emergency medical services in Parrish, one of the fastest-growing areas in our county, we are submitting and recommending an additional 24/7 ambulance to provide coverage in the area. Ambulance response time gaps, which can take up to 18 minutes or more, have become a common issue in this area of Manatee County due to the rapid growth of residential construction. In order to address this problem, we plan to add new staff and an ambulance to the response matrix, which will ensure 24/7 coverage for the area. Our tentative plan is to house the ambulance and crew at Parrish Fire District Station 2.

Rationale

Investing in an additional 24/7 ambulance in Parrish, Florida is crucial to ensure public safety and improve response times. The Emergency Medical Services (EMS) Division needs help to keep up with the increasing demands of the rapidly growing community, even with the recent EMS system improvements and additions. The current response time of over 18 minutes to North East Manatee County is unacceptable. Adding an additional 24-hour ambulance can ease the pressure on our current EMS system and provide efficient and timely care to those in need, even in the most remote parts of Manatee County.

Infra. Sales Tax: Yes
Project #: PJ6105402
Status: Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: -
Project Need: Deficiency

Project Location

Countywide TBD by Fleet

Description and Scope

Per Fleet guidelines suggest that for every three new ambulances, a spare unit is necessary to maintain optimal system performance and readiness levels. Therefore, acquiring two more ambulances is imperative to minimize downtime, optimize the current fleet's efficiency, and reduce service interruptions. Fleet's assessment suggests that this systematic approach ensures a balanced ratio between active units and spares, strengthening our emergency response capabilities and reinforcing the resilience of our system.

Rationale

The Emergency Medical Services (EMS) Division is facing a critical situation as our community is expanding rapidly, which has resulted in many challenges. Despite recent efforts to revamp our EMS system, the increasing demands have put a lot of pressure on our resources. One of the major changes we made was to bolster the fleet of ambulances to meet the surging needs. Without an adequate reserve fleet, we risk disruptions in response times, which can compromise the safety and well-being of our community. To ensure reliable, efficient, and high-quality emergency response, it is imperative to urgently increase the number of spare ambulances available to mitigate downtime and uphold our commitment to swift and high-quality care.

Project Title: Lake Manatee Advanced Life Support (ALS) Additional Ambulance

Department: Public Safety
Project Mgr: James Crutchfield
Infra. Sales Tax: -
Project #: PJ6105404 **Status:** Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: - Project Need: Growth

Project Location

District 2 1505 Dam Rd, Bradenton

Description and Scope

To meet the growing demand for emergency medical services in East County, we are submitting and recommending an additional 24/7 ambulance to provide coverage in the area. Ambulance response time gaps, have become a common issue in this area of Manatee County due to the rapid growth of residential construction. In order to address this problem, we plan to add new staff and an ambulance to the response matrix, which will ensure 24/7 coverage for the area.

Rationale

Eastern Manatee County has experienced significant population growth due to increased approved residential housing. To address this growth and ensure public safety, investing in an additional 24/7 ambulance in the Lake Manatee area is crucial for improving response times. The Emergency Medical Services (EMS) Division faces challenges in meeting the increasing demands of this rapidly expanding community, despite recent EMS system improvements and additions.
To address this need, the county has approved Capital Improvement Project (CIP) PJ6117900, which is expected to complete in FY2029. This project will enhance EMS capabilities in the area. However, it's important to note that the current lead time for ambulance manufacturing is approximately 30 months. This extended production timeline must be factored into planning and implementation to ensure timely service expansion in line with population growth and the project's completion.

Project #: PJ6105600
Status: Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: -
Project Need: Growth

Project Location

District 1 2950 - 3010 Moccasin Wallow Road, Palmetto

Description and Scope

Construct a new EMS Base to meet functional needs and increased demands of the emergency medical services division. The current EMS Station 10 can be utilized as a standard footprint for this station location. The EMS Base will need to have the ability to house 6 employees (2 ambulances) full time with sufficient parking for shift change (at least 12 parking spaces). This property must allow access for emergency vehicles 24-hours per day 365 days-per-year.

Rationale

Northern Manatee County has experienced a significant growth in population. Public Safety's Emergency Medical Services (EMS) Division continues to struggle to meet the demands of a rapidly growing community, despite the recent EMS System redesign. Adding a 24-hour ambulance and EMS Base to this area of the county will assist with the increasing call volume to ensure current level of service remains uninterrupted.
The current service area for Northern Manatee County is covered by two Ambulances

- Alpha 20 - at Parish Fire Department
- Alpha 18 - at North River Fire Station 2

Through a recent property management land purchase, the desire is to build a new EMS Base and add a 24-hour ambulance. The EMS Base will provide living quarters including a dormitory, kitchen, garage (bay space), office(s), and equipment medical storage for the North County Region.

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: -
Project Need: Growth

Project Location

District 1 1505 Dam Rd, Bradenton

Description and Scope

Existing EMS Station 5 (Quattlebaum Guest House 1505 Dam Rd) will be relocated to the New Lake Manatee EMS Base, with room for needed EMS expansion as outlined in the 2015 impact fee study. Requesting an Architect to design the EMS Base to house at least 2 Ambulances (covered inside apparatus bay) and room for medical equipment storage.

Rationale

Eastern Manatee County, has experienced significant growth in population due to an increase in approved residential housing. Station 5, the current EMS Station, is in need of drastic rehab, and there is no room for growth. Building a proposed Lake Manatee EMS Base (County acquired land, off Dam Rd) will provide living quarters which includes a dormitory, kitchen, garage (bay space), office (s), and equipment medical storage for the Eastern Manatee County Region. The Lake Manatee EMS Base will house 6-9 EMS employees (expansion) and will operate 24-hours a day 365 days a year, with room to add additional resources as growth occurs.

Project Need: Growth

Project Location

District 1 1505 Dam Rd, Bradenton

Description and Scope

Lake Manatee EMS Base - Parking lot project will add additional road improvements and infrastructure required for a functional facility for occupants and to maintain it. These well-designed and well-built road improvements are essential in providing timely and effective emergency services to the community. Lake Manatee EMS Base - Parking lot project will have all appurtenances required for a functional facility.

Rationale

Eastern Manatee County has experienced significant growth in population due to an increase in approved residential housing. Station 5, the current EMS Station has structural issues and EMS building's functionality does not meet the needs of the occupants. But the current EMS station is conveniently located in the area of population growth, so the selected location was based on the variety of factors including accessibility, proximity to major roads, and emergency response requirements. Lake Manatee EMS Base will meet all relevant safety and building standards, addressing energy efficiency, functionality, and structural integrity; and will be operational 24/7/365.

Project #: PJ6119300
Status: Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: -
Project Need: Growth

Project Location

District 3 2651 Gulf Drive South, Bradenton Beach

Description and Scope

29' Metal Shark that could be used as an ALS unit. To enhance lifeguard services and improve response capabilities for on-water emergencies, we propose the acquisition of a dedicated water rescue boat. There currently is not a vessel of this size to be able to perform these functions.

Rationale

Efficient Response: A specialized water rescue boat allows lifeguards to swiftly reach distressed swimmers, boaters, or individuals in need of assistance. Unlike traditional paddleboards or swim fins, a boat covers larger distances quickly, minimizing response time.

Safety: The safety of both lifeguards and victims is paramount. A rescue boat provides a stable platform for rescuers, reducing the risk of injury during challenging conditions (e.g., strong currents, rough seas). Versatility: The boat can be used for various scenarios, including: Swimmer Rescues: Transporting swimmers to safety. Boating Accidents/Capsizes: Assisting boaters whose vessels have overturned. Medical Emergencies: Transporting injured individuals to shore. Equipment and Supplies: The boat can carry essential equipment such as life jackets, first aid kits, oxygen tanks, and communication devices. It also accommodates multiple lifeguards, ensuring coordinated efforts. Visibility: A marked rescue boat is easily identifiable by beach goers, promoting confidence in our lifeguard services.

Department: Public Safety
Project Mgr: James Crutchfield
Infra. Sales Tax: -
Project #: PJTP25056
Status: Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes
Project Need: Growth

Project Location

District 1 35800 SR 62 E, Duette

Description and Scope

To meet the growing response times for emergency medical services in Duette, one of our county's most geographically isolated areas, we are submitting and recommending an additional 24/7 ambulance to provide coverage in the area. Ambulance response time gaps, which can take 22 minutes or more, have become a common issue in this area of Manatee County. In order to address this problem, we plan to add new staff and an ambulance to the response matrix, which will ensure 24/7 coverage for the area. Our tentative plan is to house the ambulance and crew at Duette Fire Rescue District Station.

Rationale

Introducing a 24/7 ambulance addition in Duette, the north east portion of Manatee County, stands as a pivotal measure to uphold public safety and enhance emergency response times. As our community experiences rapid growth, the existing Emergency Medical Services (EMS) Division encounters escalating demands, struggling to meet the needs despite recent system redesign and addition efforts. Presently, the response time of over 22 minutes to North East Manatee County (EMS System Average is 8.42) falls well below acceptable standards. By introducing a dedicated 24-hour ambulance, we aim to alleviate the strain on our EMS resources, ensuring swift and effective care for individuals in need, even in the most geographic remote areas of Manatee County.

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: -
Project Need: Growth

Project Location

Countywide -

Description and Scope

It is essential to acquire new ambulances to meet operational needs. This unit will replace an older truck that is at/past its end-of-life cycle. In FY2025, three ALS units were added without a spare. Fleet guidelines suggest for every three new ambulances, a spare unit is necessary to maintain optimal system performance and readiness levels. A spare will minimize downtime, optimize efficiency, and reduce service interruptions. Fleet's assessment suggests this approach ensures a balanced ratio between active units and spares, strengthening our response capabilities and reinforcing the resilience of our system.

Rationale

As our community is expanding, the EMS Division has many challenges. One change made was to increase ambulances. However, this led to a shortage of reserve ambulances, crucial for addressing mechanical downtime. This deficit threatens our ability to sustain uninterrupted emergency medical services. Without an adequate reserve fleet, we risk increased response times, compromising the safety of our community. To ensure reliable, efficient, and high-quality emergency response, it is imperative to increase the number of spare ambulances, to mitigate downtime and uphold our commitment to swift and high-quality care.

Department: Public Safety
Project Mgr: Michelle Wehrle
Infra. Sales Tax: Yes
Project #: PJTP26056 **Status:** Requested

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes Project Need: Growth

Project Location

District 5 1707 Lena Road, Bradenton

Description and Scope

Addressing challenges in Eastern Manatee County, this aims to promote public health, safety, and welfare by reducing response times and ensuring effective coverage. Facility Design / Construction: A functional and cost-effective layout for the EMS and Sheriff Sub Station will be designed to accommodate both EMS and Sheriff needs. To ensure continuous operation, it is essential to allocate appropriate staffing resources. This includes hiring EMS personnel and Sheriff deputies for this facility. Adequate vehicle resources will be provided to support the operations, including the ambulance and patrol vehicles.

Rationale

Eastern Manatee County faces increasing emergency response challenges due to rapid development and worsening traffic congestion. Current response times exceed standards in growing residential areas, creating significant safety risks. A dedicated Sheriff Sub-Station with integrated EMS capabilities would position emergency resources where demographic trends show greatest need. This facility would serve as an operational hub, reducing response times and improving coordination during critical incidents. This investment addresses immediate safety concerns while supporting long-term community growth.

Project Location

District 1 1605 Fort Hamer Rd, Parrish

Description and Scope

Purchase and install a 40'x40' pre-engineered building at the Fort Hamer boat ramp to include sitework, utilities (electric and water connections), and access.

Rationale

Manatee County Sheriff's Office needs a boat storage building for their 16' airboat and 19' skiff.

Department: Sheriff
Project Mgr: Tom Yarger
Infra. Sales Tax: Yes
Project #: PJ6093311
Status: Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes
Project Need: Growth

Project Location

District 5 5895 Post Blvd, Bradenton

Description and Scope

The building previously occupied in the Lakewood Ranch area had to be closed due to structural issues which impacted the citizens of the Lakewood Ranch area. The growth in the eastern and northern portions of Manatee County has been non-stop and calls for service in these areas continue to rise on a yearly basis due to said growth. The construction of a 5,000 sq ft substation in the Lakewood Ranch area will be of great service to the citizens who reside and work in that area of the county. A new office location in that area of the county would provide much needed MSO presence in the area.

Rationale

The building the Sheriff occupied in Lakewood Ranch became a structurally unsound and had to be vacated. The personnel housed in that building were relocated to various other MCSO locations throughout the county. The closing of this location impacted the Lakewood Ranch community whose residents regularly visited this location for various law enforcement matters. With the continuing growth of the northern and eastern portions of the county, more personnel are being assigned to these areas. The growth of the county has already justified the need of a 5,000 sq ft substation in this area to better service the needs of the county's citizenry.

Status: Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: -
Project Need: Growth, Deficiency

Project Location

District 2 11910 31st Terrace E, Palmetto

Description and Scope

Move MCSO Fleet Facility Operations upon locating a new site and construct a larger fleet maintenance facility than is currently being utilized.

Rationale

The current Fleet Services Facility is small, out dated and is uneconomical to continue to do more than minor repair to keep vehicles in operation. The property is also too small to allow expansion of the facility and there is not enough area to park vehicles staged for repair. Operations will be more cost effective once upgraded with centralized location.

Status: Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: Yes
Project Need: Deficiency, Other

Project Location

District 1 11910 31st Terrace E., Palmetto

Description and Scope

A new MCSO Fleet Facility is proposed to be constructed, the facility will need fuel support for the increased amount of equipment and MCSO fleet using this facility. Additional fuel capacity of 2 - 20,000 gallon tanks with covered fueling area, and future expansion designed into the site will allow for additional tanks to be added later.

Rationale

The current MCSO fuel site is small with limited capacity, outdated, and is in an area that has limited expansion capabilities. With the MCSO fleet facility being built, there will be a need for increased fuel capacity, convenience, and efficiency for the Public Safety work group. This fuel site will also be utilized by BOCC equipment that is providing services in the area, along with fire departments, other constitutional offices, and mutual aid support.

Project Need: Deficiency

Project Location

District 5 3500 9th Street West, Bradenton

Description and Scope

Construct a 45,000 square foot two story building adjacent to the Child Protection Investigation Division (CPID) office building located at 3500 9th Street West, Bradenton. The building should have freight elevator and ability to add floors in future and meet hurricane requirements. The building would also house the Crime Scene Unit, Fingerprint Unit and Chemistry Lab.

Rationale

The Manatee County Sheriff Office (MCSO) Operations Center facility currently has space allotted for the storing and preserving of property and evidence. Projections for future needs show the inability to store, maintain and process evidence. Construction of an additional building as requested is a priority to comply with Florida State Statutes.

LOS/Concurrency: Yes Project Need: Other

Project Location

District 2 2317 2nd Avenue West, Palmetto

Description and Scope

Various renovations to individual offices, including but not limited to a full renovation of the forensics lab, garage, and morgue, which includes insulation of the garage area and morgue area, and the expansion and renovation of lab capacities to meet Sheriff forensic team standards. Typical renovation of wear and tear items, including flooring, ceiling, paint, tile, and walls. Maintenance and repair work or replacement of HVAC, lighting, plumbing, roofing, and electrical systems, including low voltage security, roof repair or replacement, and other appurtenances required for a functional facility.

Rationale

Following the acquisition of the building, it is imperative to undertake renovations to ensure the facility complies with the essential standards and addresses the functional and aesthetic needs of the facility. Relocating the crime laboratory to a better facility is an opportunity to enhance its services and improve the quality of the lab's work. It is essential to enable the crime laboratory to relocate and serve our citizens with the same efficiency they provided at their previous location. Renovations will help ensure that the facility meets the required standards and create a functional and safe environment where the laboratory's team can carry out their work effectively. These renovations will promote better and more efficient service delivery and help the team to optimize their ability to serve the community.

Project #: PJ6006707
Status: Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes
Project Need: Growth, Deficiency

Project Location

District 2 1119 13th St E, Bradenton

Description and Scope

Demolish the current pool structures and replace the pool with a large splash pad with water features, concrete decking, pump house with pumps, piping, etc., restrooms/showers/lockers, multi-use synthetic turf field with lighting and irrigation, additional parking if necessary, shade structures, and other amenities and appurtenances as needed for a functional facility. This project is for the demolition of pool, splash pad, water features, and pump house.

Rationale

Project # 6006706 was approved and funded; however, after conducting community surveys and meetings to discuss the needs and desires of the community for east Bradenton park, the project has changed course. We request that the funding approved for project #6006706 be used for this new project. The pool has been closed for safety concerns and staffing shortfalls. The desire of the community is to replace the existing pool with a large splash pad, a multipurpose field with synthetic turf, additional parking, and security lighting. A shaded gathering area or community building if space allows.

Project #: PJ6007521
Status: Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: -
Project Need: Other

Project Location

District 3 5502 33rd Avenue Drive West, Bradenton

Description and Scope

Remodel the pool to exclude it as a dive well and to convert it to a shallow, learn to swim pool (lesson pool). Work off of the conceptual plan which includes shade structures, lounge chairs, basketball goals or volleyball goals.

Rationale

The Dive Pool at the GT Bray Aquatic Center was originally designed in 1982 and is approaching 40 years old. The Dive Pool has been in a state of disrepair for an extended period of time. Although repairs have been made the pool is still leaking and is in desperate need of additional repairs. As a result, the dive well pool has been shut down for years. It was concluded that the existing dive pool is both functionally and physically obsolete and should be replaced with more family-friendly uses such as lesson programming, a recreational depth swim lagoon, spray and play features, more shade for UV protection, and a variety of seating (chaise lounges, umbrellas, tables, and group picnic table to increase the recreation value and length of stay.

Infra. Sales Tax: -
Project #: PJ6007522 **Status:** Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: - Project Need: Deficiency, Other

Project Location

District 3 5502 33rd Avenue Drive West, Bradenton

Description and Scope

Hire a company to design the required repair strategy to remedy the structural failures and subsurface soil weakness, and prepare construction plans and specifications. Hire a Construction Manager to facilitate the repairs and incorporate with the dive well replacement project. Besides identifying and correcting the underground issues, we also want to replace the existing pool decks with new concrete and tile depth markers.

Rationale

According to a site audit performed in March 2020 the pool decks at the GT Bray Aquatics center are in poor condition. There are numerous areas where the decks have shifted and separated at joint locations due to shifting soils most likely caused by the pool leak that occurred for years. Other areas of the deck exhibit cracking and uneven surfaces. A second, follow-up inspection of the surrounding pool and dive well decking was completed in August 2020 to determine if there were any issues associated with minor leaks which continue to surface in and around the dive well and splash pad areas. The study concluded with a finding of structural failures associated with subsurface soil weakness that are expected to continue without removal/replacement of the existing soil and decking.

Project #: PJ6023514
Status: Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes
Project Need: Growth

Project Location

District 2 715 17th St. E. Palmetto 34221

Description and Scope

Finish Lincoln Splash Pad Phase II by purchasing and installing new features to fill the splash pad.

Rationale

Lincoln Park splash pad has the ability to add additional amenities for Phase II and complete the splash pad. The system is currently built to pump the necessary water load to handle the additional amenities. Due to the growth and popularity of the current splash pad, we would like to finish the splash pad for full use prior to the warm summer months. This is a free amenity for all community users.

Status: Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes
Project Need: Growth

Project Location

District 2 3675 53rd Ave E, Bradenton

Description and Scope

The splash pad will be approximately 4,000 sq. ft. and it will require the appropriate piping and electrical run throughout the site, in order for the construction to be fully completed, including FF&E.

Rationale

A splash pad is both visually appealing (from a distance) and also interactive. As such, they are designed to allow access at ground level, making it accessible to those with special needs and young children. By having a feature with no standing water it will eliminate the possibility of a drowning. One employee will be needed during the operational hours to ensure the safety of all splash pad participants.

Status: Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: -
Project Need: Deficiency

Project Location

District 2 3675 53rd Ave E, Bradenton 34203

Description and Scope

Replace the pool at John H Marble park with a new 8-lane 25M pool, including other appurtenances, safety features, and FF&E.

Rationale

The John H Marble facility has deteriorated over the years. The County took ownership in the mid 1990's. The John H Marble Pool is showing extreme signs of age, deterioration and safety concerns. The opening of a new facility without an updated and safe operational pool will cause a need for future improvements and repairs expenses. Renovations to a pool of this age and condition often uncover unknown conditions, such as structural issues, that can impact costs. Additionally, such repairs often only extend the life of the pool for 10 years maximum, whereas a new aquatic facility should last for another 30 years.

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: - Project Need: Other

Project Location

District 3 5502 33rd Avenue Drive West, Bradenton, FL 34209

Description and Scope

Replace the existing pump and filtration equipment with new equipment to be located outside underneath an open-air structure. The existing surge tanks and abandoned motor pits will be filled and a new slab will be poured within the pump house. The pump house will be converted to a storage building. Existing pool piping servicing the lap pool and existing dive well will be cut-off outside of the existing pump house and covered roof enclosure west of the pump house. Pool piping for the new pump and filtration equipment will be routed to connect to the existing pool piping connections. Existing electrical service located will be relocated outside to a new panel located near the new pump equipment. The current electrical service will be shortened by placing the new equipment outside. The existing fenced in area southeast of the existing pump house will be the location for the new pump and filtration equipment.

Rationale

The Dive Pool at the GT Bray Aquatic Center was originally designed in 1982 and is approaching 40 years old. The old dive well which is now obsolete will be replaced with a learn-to-swim pool which will require new pumps and filtration equipment. Since the current pump room is almost 40 years old and has had recent issues with major leaks, Manatee County will replace the existing lap pool pump and filtration equipment at the same time. The new equipment will be covered by a prefabricated open-air structure as the current pump structure needs to be demolished.

Project Location

District 2 400 Cypress Creek Blvd, Bradenton

Description and Scope

Design, permit and construct the following amenities per the FCT Management Plan: a simple splash pad (i.e.: concrete pad dish shade with one waterspout) and related amenities, safety features and furniture, fixtures and equipment (FF&E).

Rationale

Manatee County's Bennett Park is a Florida Communities Trust (FCT) grant project site that is not fully developed as required by the Special Management Conditions and Management Plan. Although many amenities that are cited in the Management Plan have been implemented and enjoyed by the community, there are still three amenities that need to be built in order to fulfill Manatee County's obligation to FCT.

Project Title: Premier Sports Complex Swimming Pool
Department: Public Safety
Project Mgr: Tom Yarger
Infra. Sales Tax: -
Project #: PJ6093307
Status: Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes
Project Need: Growth

Project Location

District 5 5895 Post Blvd, Lakewood Ranch

Description and Scope

Design, permit and construct two swimming pools: one 25-meter X 50-meter and one therapy pool. The pools will also include associated facilities and appurtenances to have a functional facility to include locker rooms with showers and restrooms, first aid and life guard office, starting blocks, lane lines, in pool and deck lighting, water heating and cooling system, filtration system, pump house, parking lot, deck seating and shade structures, safety equipment, and FF&E.

Rationale

In a Board of County Commissioners work session in FY18, a need for additional facilities was identified in East County to provide services to area residents. In addition, with a lack of competitive swim lanes throughout the county, this will provide the resources currently lacking. The 127 acre Premier Sports Complex was acquired by the County in FY18. An additional 75 acres on the north side of Premier was approved by the Board and for purchase by the County in FY18 to facilitate this new County complex. The concept of this project is to provide accessible amenities in the east county that will accommodate large group programming and competitive level swimming meets, as well as supplement the Premier Sports Campus.

Status: Existing

Comprehensive Plan Information

CIE Project: No
LOS/Concurrency: No
Project Need: Deficiency

Project Location

District 1 14470 Harlee Road, Palmetto

Description and Scope

Manatee County will install two prefabricated 16-kennel buildings, a prefabricated storage/sandbag building, and an air-conditioned storage facility to include concrete slab, utilities, site work, roadway improvements, fill placement and potential storm-water facilities and all appurtenances required for a functional facility. This project is for two prefabricated 16-kennel buildings.

Rationale

Due to dog overcrowding at Manatee County's Palmetto Animal Shelter, a new supplemental kennel for the large dogs needs to be built. With the help of the Manatee County Sherriff's Central Jail team, the Animal Welfare Division would like to build two 16-dog kennels at this site, along with a storage facility to house chemicals and sandbags, and an air-conditioned storage facility for dog medicines and food. Dogs will be cared for by the inmates and this will help with the inmates rehabilitation.

Category: Public Safety Category
Subcategory: -
Project Title: Myakka Yard Generator
Department: Public Works
Project Mgr: Jeff Streitmatter
Infra. Sales Tax: No
Project #: PJ6119400
Status: Existing

Comprehensive Plan Information

CIE Project: No
LOS/Concurrency: No
Project Need: Deficiency

Project Location

District 1 36650 Arcadia Avenue, Myakka City

Description and Scope

Design, permit, purchase, install, and construct a new permanent diesel generator with a capacity of 47kW (or adequate size determined by vendor or electrical engineer), to support the Myakka Yard Rural Public Works Facility. This project includes all necessary electrical components including an Automatic Transfer Switch (ATS) and a distribution panel (installed inside the existing building). The generator shall be protected against a 500-year flood event, comply with applicable National Flood Insurance Program (NFIP) requirements, and shall be protected against wind with a rated enclosure and appropriate anchoring based on its location requirements per ASCE 7 standard. The location of the generator at project site shall provide sufficient space to maintain and fuel the generator, and comply with the National Electrical Code working clearance requirements. Activities shall be completed in strict compliance with federal, state and local applicable rules and regulations and the executed Federally Funded Subaward and Grant Agreement (H1072).

Rationale

Federal Emergency Management Agency's (FEMA) Hazard Mitigation Grant Program (HMGP) provides funding to state, local, tribal and territorial governments so they can develop hazard mitigation plans and rebuild in a way that reduces, or mitigates, future disaster losses in their communities. The County received funding through the HMGP for replacing the generator at the Myakka Yard Rural Public Works Facility that was damaged by Hurricane Ian (FEMA Project Number 4673-012-R). The Federal Share for the grant is $400,000.48 ($420,000 with contingency). The county match is $194,114.52 ($203,820 with contingency.) This project is to fund both the County's share of the generator project and the reimbursable amount awarded in the grant.

Infra. Sales Tax: -
Project #: PJ6087004
Status: Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: -
Project Need: Growth, Other

Project Location

Multi-district Countywide

Description and Scope

Full Public Safety/Emergency redundant communications for North Link, South Link, West Link , Manatee County Jail and Port and Water Treatment Plant - including Bournside to have a seamless approach to emergency efforts.

Rationale

This project focuses on public safety by affording the county with dual-path connectivity between two operational Data Centers. The first is located within the Administration Building in downtown Bradenton while the second is with the Public Safety Center. By providing the missing links or spokes to the fiber loop, it postulates the safety and crucial communications during a declared event. The impact on our citizens could be a life-saving endeavor.

Project Title: Fiber Expansion to the Emergency Operations Center (EOC)
Department: Information Technology
Project Mgr: Drew Richardson
Infra. Sales Tax: -
Project #: PJ6087005 **Status:** Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: - Project Need: Deficiency

Project Location

Multi-district 2101 47th Terrace E, Bradenton

Description and Scope

The scope of the project is to increase fiber capacity as a dedicated source for enhanced disaster recovery capabilities. To ensure the necessary resources are expanded to improve backup for all emergencies. New fiber lines to maintain high levels of reliability, redundancy and security for critical communications. By adding the new fiber it will minimize disruptions or downtime during any future installations of fiber lines on existing operations.

Rationale

This request outlines the urgent need for additional fiber connectivity to support the Clerk of the Court's growing business requirements. MC ITS is responsible for managing and maintaining the fiber lines running from downtown to the Emergency Operations Center (EOC). However, currently all existing fiber lines are fully utilized, leaving no capacity for expansion. This request is for 3 additional 2-pair fiber lines dedicated for threats posed by hurricanes to ensure continuation of services. To connect downtown to the EOC through a Capital project in 2025 - 2026 solidifies its mission critical needs for disaster preparedness and recovery capabilities.

Project #: PJ6109800 **Status:** Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: - Project Need: Maintenance

Project Location

Countywide Countywide

Description and Scope

The County's technology infrastructure relies on servers, storage and networking running in two data centers. There are more than 400 virtual servers, dozens of databases, and hundreds of applications and interfaces. This project upgrades the equipment that provides these services.

Rationale

To ensure reliable operation and expected performance levels, equipment must be replaced/upgraded at the end of its service life. Equipment will provide redundancy and performance to support continued growth and demand for resources.

Category: Technology
Subcategory: -
Project Title: County Parking Garage - Radio Tower
Department: Information Technology
Project Mgr: John Hamel
Infra. Sales Tax: -
Project #: PJ6117500
Status: Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: -
Project Need: Growth

Project Location

Countywide 1801 5th Street West, Bradenton

Description and Scope

The downtown "Main" P25 Radio site next to the parking garage needs to be replaced and commissioned before the current site is decommissioned so construction can be performed on the existing parking garage. This project will include, but is not limited to engineering, permitting, fiber installation, construction and equipment necessary to support the new radio tower.

Rationale

When Manatee County's new Motorola P25 Public Safety Radio System was commissioned, which supports over 5,000 Public Safety subscriber radios spanning across 51 agencies with the majority of those users being emergency workforce personnel. The system is comprised of 10 radio tower sites strategically located across the County to provide optimum radio coverage to our end users. These sites consist of 200' to 250' free standing Cat 5 rated towers for our site antennas and microwave dishes. Cat 5 rated shelters to house the radio equipment along with a back-up generator at each site. The sites were designed for maximum uptime and/or accessibility. If a site would go down, we would lose Public Safety communications in that given area. The downtown "Main" tower site provides critical lifesaving communications for the City of Bradenton, City of Palmetto, EMS, MCSO, etc. in our downtown Bradenton area. This critical resource cannot be disrupted.

MANATEE COUNTY GOVERNMENT
Capital Improvement Plan
FY2026 - FY2030

Category: Transportation **Subcategory:** Intersections
Project Title: 44th Ave E at Uihlein Road Intersection Improvements
Department: Public Works
Project Mgr: Vishal Kakkad
Infra. Sales Tax: -
Project #: PJ6045664 **Status:** Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes Project Need: Growth

Project Location

District 5 44th Ave E at Uihlein Road, Lakewood Ranch

Description and Scope

Design, permit, and install a span wire traffic signals with concrete assemblies and associated pedestrian crossings for all legs. In addition, install non-intrusive detection system, CCTV cameras, MVDS, and install fiber-optic connection from 44th Ave E (at Asolo Blvd) to Uihlein Road.

Rationale

Two thoroughfares, 44th Ave E and Uihlein Road, are four-lane divided roadways classified as arterial and collector, respectively, in the County's Comprehensive Plan. The intersection of 44th Ave E and Uihlein Road currently operates as an all-way stop control. With 44th Ave E extending to Bourneside Boulevard, Uihlein Road connecting two major state roads (SR 64 & SR 70), and with major developments near this intersection, there has been a steady growth of traffic in the area that is expected to continue. Staff recommends installation of a span wire traffic signal at this intersection as an interim condition (10-15 years) before permanent improvement is determined. The traffic signal is expected to improve the overall operations and safety for all users. In addition, staff also recommends including Advanced Traffic Management Systems (ATMS) infrastructure such as fiber, CCTV cameras Microwave Vehicle Detection Systems to provide connection to the Traffic Management Center (TMC) to improve operational and monitoring capabilities.

Project #: PJ6045665 **Status:** Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes Project Need: Growth

Project Location

District 5 44th Avenue E and Wood Fern Trail, Bradenton

Description and Scope

Design, permit, and install a span wire traffic signals with concrete assemblies and associated pedestrian crossings for all legs. Evaluate, design, permit, and construct turn lane improvements (adding or extending), as needed. In addition, install non-intrusive detection system, CCTV cameras, MVDS, and install fiber-optic connection from Lakewood Ranch Blvd to White Eagle Blvd.

Rationale

The 44th Avenue E thoroughfare is a four-lane divided roadway classified as arterial per the County's Comprehensive Plan. The intersection of 44th Ave E and Wood Fern Trail operates as a stop-control for the side street approaches (Wood Fern Trail/Great Park Boulevard). With 44th Ave E now extended further eastward to Bourneside Boulevard, combined with major developments near this intersection (including elementary and middle schools), there has been a steady growth of traffic in the area that is expected to continue. Staff recommends installation of a span wire traffic signal at this intersection as an interim condition (10-15 years) before permanent improvement is determined. The traffic signal is expected to improve the overall operations and safety for all users. In addition, staff also recommends including Advanced Traffic Management Systems (ATMS) infrastructure such as fiber, CCTV cameras Microwave Vehicle Detection Systems (MVDS) to provide connection to the Traffic Management Center (TMC) to improve operational and monitoring capabilities. Interim signal to be upgraded to mast arm assemblies in the future.

Project Title: 69th Street E and Erie Road Intersection Improvements
Department: Public Works
Project Mgr: Derek O'Sullivan
Infra. Sales Tax: Yes
Project #: PJ6048461 **Status:** Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes Project Need: Growth

Project Location

District 1 69th St E and Erie Rd, Parrish

Description and Scope

Prepare traffic operational analysis to determine the appropriate type of traffic control (Traffic Signal or Roundabout). Design and construct interaction operational and safety improvements at the 69th Street East and Erie Road intersection.

Rationale

69th Street East and Erie Road are both classified as thoroughfare roadways within the County's Comprehensive Plan. Under the existing conditions, the intersection of 69th Street E and Erie Road is stop-controlled for the southbound (69th Street E) approach. During the peak periods, the intersection does not operate efficiently as southbound traffic experiences high delays due to increased traffic volume along the Erie Road. There have been a steady growth of traffic in the area and this growth is expected to continue with the ongoing residential developments and new schools in the area. Staff is proposing to evaluate and install either a traffic signal or roundabout at this location. A traffic operational analysis will determine the most effective form of traffic control at this intersection. The selected traffic control is expected to improve the overall operations and safety of the vehicles, pedestrians, and bicyclists in the vicinity of the new schools and residential developments.

Department: Public Works
Project Mgr: Derek O'Sullivan
Infra. Sales Tax: Yes
Project #: PJ6048561 **Status:** Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes Project Need: Growth

Project Location

District 2 17th St E at US 41, Palmetto

Description and Scope

Design and construct an eastbound right-turn lane at the US 41 and 17th Street East intersection, construct pedestrian ramps, crosswalks, and utility relocation. Relocate/modify traffic signal infrastructure and operations to accommodate these changes.

Rationale

This area of the County continues to experience steady growth and is expected to continue this trend in the future. Due to the continuing expected growth, the intersection of US 41 and 17th Street East is in need of additional capacity. Construction of an eastbound right-turn lane at the existing signalized intersection for operation and safety will increase intersection capacity and separate conflicts between right turning vehicles and through traffic.

Project Title: 53rd Ave W at US 41 Intersection Improvements
Department: Public Works
Project Mgr: Zachary Tarifa
Infra. Sales Tax: Yes
Project #: PJ6048562 **Status:** Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes Project Need: Growth

Project Location

District 4 53rd Ave W at US 41, Bradenton

Description and Scope

Design and construct an eastbound right-turn lane at the US 41 and 53rd Avenue West intersection, construct sidewalk, pedestrian ramps, crosswalks, drainage and utility relocation. Relocate/modify traffic signal infrastructure and operations to accommodate these changes. This improvement has been identified as a background improvement needed to achieve adopted levels of Service (LOS) for development in west County.

Rationale

This area of the County continues to experience steady growth and is expected to continue this trend in the future. 2018 county crash rates indicate the intersection of US 41 and 53rd Avenue West has the highest crash rate in the county. Due to the continuing expected growth, and high rate of crashes, the intersection of US 41 and 53rd Avenue West is in need of safety and operational improvements. This corridor also provides an alternate east-west route to Cortez Road. Construction of an eastbound right-turn lane at the existing signalized intersection for operation and safety will increase intersection capacity and improve safety by separating conflicts between right turning vehicles and through traffic.

FY2026 - FY2030

Category: Transportation
Subcategory: Intersections
Project Title: Wildcat Preserve Roadway
Department: Public Works
Project Mgr: Derek O'Sullivan
Infra. Sales Tax: Yes
Project #: PJ6054760
Status: Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes
Project Need: Growth

Project Location

District 1 Fort Hamer and Golf Course Rd, Parrish

Description and Scope

Construct left and right turn lanes for the entrances to the Wildcat Preserve development. In addition, a traffic separator for the western most entrance on Golf Course Road, associated stormwater improvements, and pedestrian improvements at the intersection of Ft. Hamer and Golf Course Road will be included. Right-of-way dedication will be paid with impact fee credits.

Rationale

On August 8, 2013, the Board of County Commissioners adopted planning ordinance PDMU-12-18(Z)(P) - Wildcat Parrish, LLC/Wildcat Preserve approving the rezone of approximately 89.72 acres for the Developer to construct 242 single family detached residences and a commercial out parcel for 51,346 square feet of retail and office use. The rezone did not include any transportation stipulations for turn lanes at any access since the traffic impact statement concluded that they were not required as the roadways would continue to operate above the County's adopted level of service. The Final Site Plan was approved on August 1, 2014 without turn lanes based on the traffic impact statement. County staff has determined that turn lanes at each access of the development are now warranted for safety and operational considerations with the increased development in the area. An agreement was negotiated with the Developer to participate in constructing the turn lanes and dedicating the required right-of-way to the County as part of the Wildcat Preserve development project.

Project Need: Growth

Project Location

District 4 Tallevast Rd at Tuttle Ave, Sarasota

Description and Scope

Add separate northbound, southbound right turn lanes.

Rationale

Improve operations and safety at existing signalized intersection.

Project Title: Tuttle Avenue at 63rd Avenue E (Honore Avenue) - Traffic Signal and Intersection Improvements
Department: Public Works
Project Mgr: Tony Russo
Infra. Sales Tax: Yes
Project #: PJ6065961 **Status:** Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes Project Need: Growth

Project Location

District 4 Tuttle Ave at 63rd Ave E, Bradenton

Description and Scope

Install traffic signal with mast arm supports, construct northbound, southbound, eastbound and westbound left turn lanes, eastbound and southbound right turn lanes, and extend northbound right turn lane. Provide fiber optic communication related infrastructure and other Advance Traffic Management System (ATMS) devices.

Rationale

A traffic signal warrant study was conducted at this intersection in response to citizen requests. The study included collecting traffic data (volume and crash) and a field review. Pursuant to the Manual on Uniform Traffic Control Devices (MUTCD), the criteria to install a traffic signal were met due to the reported crashes and traffic volumes.Tuttle Avenue extension that was completed recently, now connects University Parkway and SR 70. This new connection between major arterials in the County is adding additional traffic volume through this intersection. Based on the result of the study and field observations, an installation of a traffic signal is recommended for this intersection. As part of this project, left turn lanes will be added on all approaches to accommodate the existing and expected future traffic.The project will also add right turn lanes for the southbound and eastbound approaches and extend northbound right turn lane to accommodate existing and future traffic demands.The proposed project will install fiber optic communication and other related infrastructure to connect and monitor the signal from the Regional Traffic Management Center.

Project Location

District 1 69th St E at 60th Ave E (Buffalo Rd) Intersection, Palmetto

Description and Scope

This project is for intersection improvements at 60th Ave E (Buffalo Road) and 69th St E. Whereas, Segment 2 includes intersection improvements at 60th Ave E at Mendoza Road.

Rationale

This project will improve the capacity and operational efficiency of 60th Ave E (Buffalo Road) and 69th St E intersection. With the planned connection of 60th Ave E (Buffalo Road) to the south and increased development in the area, the signal and turn lane improvements for the road network to function at the desired level of service. The improvements for this project are currently included in project #6083160 60th Ave E - US 301 / Outlet Mall Entrance. This segment of the existing project will have a different construction schedule thus is being separated out as a standalone project. These improvements are currently referred to as Segment 3 of the 60th Ave E - US 301 / Outlet Mall Entrance project.

Project Title: 69th St E at 51st Ave E Intersection Improvements
Department: Public Works
Project Mgr: Justin Rourk
Infra. Sales Tax: -
Project #: PJ6083165 **Status:** Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes Project Need: Growth

Project Location

District 1 69th Street E at 51st Ave E, Palmetto

Description and Scope

Design, permit, and install span wire traffic signals with concrete assemblies and associated pedestrian crossings for all legs. Evaluate, design, permit, and construct turn lane improvements (adding or extending), as needed. In addition, install non-intrusive detection system, CCTV cameras, MVDS, and install fiber-optic connection from Buffalo Road to 51st Ave E.

Rationale

The 69th St E and 51st Ave E intersection, is located in an area of the County that is experiencing rapid growth and traffic demand. The northbound and southbound approaches (51st Ave E and 47th Ave E, respectively) are stop-controlled. With expected increases in traffic, road users on these approaches will experience increasingly higher delays. Installation of a traffic signal along with pedestrian crossing features is recommended to alleviate traffic congestion. The traffic signal is expected to improve the overall operations and safety for all users. In addition, staff also recommends providing Advanced Traffic Management Systems (ATMS) infrastructure such as fiber-optics, CCTV cameras, and Microwave Vehicle Detection Systems (MVDS) to provide connection to the Traffic Management Center (TMC) to improve operational and monitoring capabilities.

Project Title: Harrison Ranch Blvd at US 301 Intersection Improvements
Department: Public Works
Project Mgr: Jeff Streitmatter
Infra. Sales Tax: -
Project #: PJ6083166 **Status:** Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: - Project Need: Growth

Project Location

District 1 Harrison Ranch Blvd at US 301, Parrish

Description and Scope

(1) Design and permit mast arm traffic signals for the intersection of US 301 and Harrison Ranch Blvd/Silverleaf Ave; (2) Design, permit, and construct intersection improvements on US 301 and Harrison Ranch Blvd/Silverleaf Ave.

Rationale

Harrison Ranch Blvd and Silverleaf Ave, (southbound and northbound approaches, respectively), are stop-controlled at the US 301 intersection. Road users of this intersection (including the eastbound and westbound left turns on US 301) currently experience delays. To improve safety and traffic circulation of the intersection, it is recommended to construct a traffic signal at the intersection and make certain geometric road improvements to the intersection. This project is to fund the associated developer's agreement for design and permitting of the traffic signal (signal construction to occur through a separate CIP project by the County) and the design, permitting, and construction of geometric road improvements to the intersection.

Project Location

District 1 US 301 at Harrison Ranch Blvd, Parrish

Description and Scope

Install and construct traffic signals with mast arm assemblies and associated pedestrian crossings for all approaches. In addition, install non-intrusive detection system, CCTV cameras, MVDS, intersection lighting, and install fiber-optic connections.

Rationale

The US 301 and Harrison Ranch Blvd intersection located in Parrish is experiencing rapid growth and traffic demand. The SB and NB approaches as well as the EB and WB left turns will experience increasingly higher delays. Installation of a traffic signal along with pedestrian crossing features is recommended to alleviate the problem and improve the overall
operations and safety for all users. In addition, staff also recommends providing Advanced Traffic Management Systems (ATMS) infrastructure to improve operational and monitoring capabilities. The signal design is being completed as part of a separate project.

Project #: PJ6093861 **Status:** Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes Project Need: Growth

Project Location

District 5 Rangeland Pkwy at Uihlein Rd, Lakewood Ranch

Description and Scope

Evaluate, design, permit, and install span wire traffic signals with concrete assemblies assemblies and associated pedestrian crossings for all legs. In addition, install non-intrusive detection system, CCTV cameras, MVDS, and install fiber-optic connections from Uihlein Rd to Bourneside Blvd.

Rationale

Two thoroughfares, Rangeland Pkwy and Uihlein Rd, are four-lane divided roadways classified as collectors in the County's Comprehensive Plan. The intersection of Rangeland Pkwy and Uihlein Rd currently operates as an all-way stop control. This intersection is surrounded by major traffic generators (e.g., Premier Sports Campus, Lakewood National and Esplanade communities, the future Lakewood Ranch Library and Aquatic Center, etc.). There has been a steady growth of traffic in the area that is expected to continue. Staff recommends installation of a span wire traffic signal at this intersection as an interim condition (10-15 years) before permanent improvement is determined. The traffic signal is expected to improve the overall operations and safety for all users.. In addition, staff also recommends including Advanced Traffic Management Systems (ATMS) infrastructure such as fiber, CCTV cameras Microwave Vehicle Detection Systems to provide connection to the Traffic Management Center (TMC) to improve operational and monitoring capabilities.

Project Title: Rangeland Pkwy at New Haven Blvd Intersection Improvements
Department: Public Works
Project Mgr: Vishal Kakkad
Infra. Sales Tax: -
Project #: PJ6093862 **Status:** Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes Project Need: Growth

Project Location

District 5 Rangeland Pkwy at New Haven Blvd, Lakewood Ranch

Description and Scope

Evaluate, design, permit, and construct a span wire traffic signal with concrete assemblies and associated pedestrian crossings for all legs. In addition, install non-intrusive radar detection system, CCTV camera, MVDS, fiber-optic interconnection, intersection lighting, and modify the New Haven Blvd approaches to three lane approaches.

Rationale

The Rangeland Pkwy and New Haven Blvd intersection is stop-controlled for the New Haven Boulevard approaches. During peak demands (e.g., AM and PM periods, school pick-up/drop-off, etc.), the intersection does not operate efficiently, as the New Haven Blvd traffic must stop before proceeding. There has been a steady growth of traffic in the area, as the area continues to develop the side street traffic is expected to experience higher delays. With opening of the Lakewood Ranch Charter School and its high school expansion, there is an immediate need to provide a span wire traffic signal at this intersection as an interim condition (10-15 years) before permanent improvement is determined. The traffic signal is expected to improve the overall operations and safety for all users. In addition, staff also recommends including Advanced Traffic Management Systems (ATMS) infrastructure such as fiber, CCTV cameras Microwave Vehicle Detection Systems to provide connection to the Traffic Management Center (TMC) to improve operational and monitoring capabilities. Interim signal to be upgraded to mast arm assemblies in the future.

Project Location

District 5 Rangeland Pkwy at Post Blvd, Bradenton

Description and Scope

Evaluate, design, permit, and install a span wire traffic signals with concrete assemblies and associated pedestrian crossings for all legs. In addition, install non-intrusive detection system, CCTV cameras, MVDS, and install fiber-optic connections from Loraine Rd to Uihlein Rd.

Rationale

Rangeland Pkwy and Post Blvd is classified as a collector thoroughfare in the County's Comprehensive Plan that create a t-intersection. Both are a 4-lane divided roadway with Post Blvd being stop controlled. 59th Ave E is a 2-lane undivided facility. This intersection is surrounded by major traffic generators (e.g., Premier Sports Campus, Lakewood National and Esplanade communities, the future Lakewood Ranch Library and Aquatic Center). There is a steady growth of traffic in the area and is expected to continue. Staff recommends installing an interim traffic signal. Staff also recommends including Advanced Traffic Management Systems (ATMS) infrastructure such as fiber, CCTV cameras Microwave Vehicle Detection Systems to provide connection to the Traffic Management Center (TMC) to improve operational and monitoring capabilities. The traffic signal is expected to improve the overall operations and safety of the vehicles, bicyclists, and pedestrians at this intersection. Interim signal to be upgraded to mast arm assemblies in the future.

Project #: PJ6093865 **Status:** Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: - Project Need: Growth

Project Location

District 5 Uihlein Rd at Academic Ave, Lakewood Ranch

Description and Scope

Evaluate, design, permit, and construct a span wire traffic signal at Uihlein Rd and Academic Ave with non-intrusive detection system, pedestrian features, CCTV camera and wireless switch improvements.

Rationale

The Uihlein Rd at Academic Ave is a three-legged intersection with stop-controlled approach on Academe Avenue. There has been sustained growth of traffic in the area, as the area continues to develop the side street traffic is expected to experience higher delays. With the upcoming K-8 school on Academic Avenue, there is a need to provide a span wire traffic signal (10-15 year) at this intersection. The traffic signal is expected to improve the overall operations and safety for all users.

Project Title: The Masters Ave at Bourneside Blvd Roundabout
Department: Public Works
Project Mgr: Jamarr Norman
Infra. Sales Tax: -
Project #: PJ6094862 **Status:** Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: No Project Need: Growth

Project Location

District 5 The Masters Ave at Bourneside Blvd, Bradenton

Description and Scope

Design, permit, and construct a two-lane roundabout at the intersection of The Master Avenue and Bourneside Boulevard. Project includes construction phase engineering services. Process reimbursement request pursuant to the reimbursement agreement with the District.

Rationale

The Masters Avenue and Bourneside Boulevard are future collector thoroughfare on the County's 2045 Future Traffic Circulation Map and are located within the Lakewood Ranch Stewardship District (District) which was established for the purpose of planning, financing, constructing, operating and/or maintaining infrastructure improvements. The District is planning on constructing the eastern two-lanes of Bourneside Boulevard. To ensure safe traffic circulation with the District improvements, the staff recommend installing a roundabout at the intersection of The Master Avenue and Bourneside Boulevard. This will be accomplished through a reimbursement agreement with the District for their costs to design, permit, and construct the roundabout.

Project Title: Lakewood Ranch Blvd at Clubhouse Dr-Traffic signal and Intersection Imprv
Department: Public Works
Project Mgr: Albert Rosenstein
Infra. Sales Tax: Yes
Project #: PJ6099760 **Status:** Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes Project Need: Growth

Project Location

District 5 Lakewood Ranch Blvd at Clubhouse Dr, Bradenton

Description and Scope

Install traffic signal with mast arm supports, construct northbound and southbound right turn lanes, eastbound and westbound left turn lanes, extend northbound and southbound left turn lanes. Provide fiber optic communication related infrastructure and other Advance Traffic Management System (ATMS) devices.

Rationale

Traffic Engineering staff conducted traffic signal warrant study at this intersection in response to citizen requests. The study included collecting traffic data (volume and crash) and a field review. Pursuant to the Manual on Uniform Traffic Control Devices (MUTCD), the criteria to install a traffic signal were met. Currently, this intersection operates as an all-way stop control. Based on the result of the study and field observations, an installation of a traffic signal is recommended for this intersection. As part of this project, northbound and southbound left turn lanes will be extended to accommodate the existing and expected future traffic. The project will also add the northbound and southbound right turn lanes and the eastbound and westbound left turn lanes. The proposed project will install fiber optic communication and other related infrastructure to connect and monitor the signal from the Regional Traffic Management Center.

Category: Transportation **Subcategory:** Intersections
Project Title: Lakewood Ranch Blvd at Wood Fern Trail Intersection Improvements
Department: Public Works
Project Mgr: Vishal Kakkad
Infra. Sales Tax: -
Project #: PJ6099761 **Status:** Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes Project Need: Growth

Project Location

District 5 Lakewood Ranch Blvd at Wood Fern Trail, Lakewood Ranch

Description and Scope

Evaluate, design, permit, and construct a span wire traffic signal with concrete assemblies with associated pedestrian crossings for all legs. Evaluate, design, permit, and construct turn lane improvements (adding or extending), as needed. In addition, install non-intrusive detection system, CCTV cameras, MVDS, and install fiber-optic connection to the TMC.

Rationale

Lakewood Ranch Blvd is classified as an arterial thoroughfare in the County's Comprehensive Plan. The intersection of Lakewood Ranch Blvd and Wood Fern Trail operates as a one-way stop control on Wood Fern Trail and at peak demand does not operate efficiently, as the Wood Fern Trail traffic must stop before proceeding. There has been a steady growth of traffic in the area that is expected to continue due to future developments. Staff recommends installing an interim traffic signal to improve safety and operations for all users. Staff also recommends including Advanced Traffic Management Systems (ATMS) infrastructure such as fiber, CCTV cameras Microwave Vehicle Detection Systems (MVDS) to provide connection to the Traffic Management Center (TMC) to improve operational and monitoring capabilities. Interim traffic signal will be evaluated in the future for upgrades to mast arms or roundabout.

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes Project Need: Growth

Project Location

District 5 Lakewood Ranch Blvd at Gatewood Dr, Lakewood Ranch

Description and Scope

Evaluate, design, permit, and construct a span wire traffic signal with concrete assemblies with associated pedestrian crossings for all legs. Evaluate, design, permit, and construct turn lane improvements (adding or extending), as needed. In addition, install non-intrusive detection system, CCTV cameras, MVDS, and install fiber-optic connection to the TMC.

Rationale

Lakewood Ranch Blvd and Gatewood Dr are classified as arterial and collector, respectively, in the County's Comprehensive Plan. This intersection operates as a one-way stop controlled on Gatewood Dr. and at peak demand does not operate efficiently, as Gatewood Dr. traffic must stop before proceeding. There has been a steady growth of traffic in the area that is expected to continue due to future developments. Staff recommends installing an interim traffic signal at this intersection to improve safety and operations for all users. Staff also recommends including Advanced Traffic Management Systems (ATMS) infrastructure such as fiber, CCTV cameras Microwave Vehicle Detection Systems (MVDS) to provide connection to the Traffic Management Center (TMC) to improve operational and monitoring capabilities. Interim traffic signal will be evaluated in the future for upgrades to mast arms or roundabout.

Infra. Sales Tax: -
Project #: PJ6099763 **Status:** Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: - Project Need: Growth

Project Location

District 5 Lakewood Ranch Blvd at East Manatee Fire District Station 1, Lakewood Ranch

Description and Scope

Design and construct an span wire emergency traffic signal at the East Manatee Fire District Station with concrete assemblies and deploy fiber-optic infrastructure to establish communication with the Traffic Management Center.

Rationale

Lakewood Ranch Blvd is a County thoroughfare. There has been a steady growth of traffic in the area and is expected to continue with the ongoing growth throughout the county. As the area continues to develop and experience growth, gaps in traffic are becoming less adequate to permit the timely entrance of emergency vehicles. Staff recommends installation of an emergency span wire traffic signal at this intersection as an interim condition (10-15 years) before permanent improvement is determined to allow for direct emergency vehicle access to Lakewood Ranch Blvd at East Manatee Fire District Station 1.

Department: Public Works
Project Mgr: Jeff Streitmatter
Infra. Sales Tax: -
Project #: PJ6099764 **Status:** Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes Project Need: Growth

Project Location

District 5 Lakewood Ranch Boulevard at Portal Crossing, Lakewood Ranch

Description and Scope

Design, permit, and install a span wire traffic signals with concrete assemblies and associated pedestrian crossings for all legs. Evaluate, design, permit, and construct turn lane improvements (adding or extending), as needed. In addition, modify median openings, install non-intrusive detection system, CCTV cameras, MVDS, and install fiber-optic connections with the TMC.

Rationale

Lakewood Ranch Blvd and Portal Crossing intersection is operating as stop-control for the Portal Crossing approaches (east and westbound). Steady growth of traffic in the area is expected to continue causing side street traffic to experience higher delays due to increased traffic volume on Lakewood Ranch Blvd. Staff recommends installing an interim traffic signal, to improve safety and operations for all users at this intersection. Staff also recommends including Advanced Traffic Management Systems (ATMS) infrastructure such as fiber optics, CCTV cameras Microwave Vehicle Detection Systems to provide connection to the Traffic Management Center (TMC) to improve operational and monitoring capabilities. Raised medians will be required to restrict turning movement associated with the traffic signal. Interim signal to be upgraded to mast arm assemblies in the future.

Project #: PJ6099765 **Status:** Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes Project Need: Growth

Project Location

District 5 Lakewood Ranch Boulevard at Woodfern Trail, Bradenton

Description and Scope

Design and construct a roundabout at the Lakewood Ranch Boulevard and Woodfern Trail intersection, construct pedestrian ramps, crosswalks with RRFBs on all approaches, resurface all approach lanes for restriping for appropriate lane designation and appropriate signing and pavement markings.

Rationale

With the increase in traffic, a roundabout would provide needed traffic control at this intersection along with implementing a safe systems approach. During the peak periods, the intersection does not operate efficiently as the traffic entering the intersection has to stop before proceeding. There have been a steady growth of traffic in the area and this growth is expected to continue with the ongoing developments in the area. Staff is proposing to install a roundabout at this location which expected to improve the overall operations and safety of the vehicles, pedestrians, and bicyclists.

Project Title: Lockwood Ridge Road at Shopping Center Entrance - Traffic Signal
Department: Public Works
Project Mgr: Eddy Zappacosta
Infra. Sales Tax: -
Project #: PJ6099860 **Status:** Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes Project Need: Growth

Project Location

Multi-district Lockwood Ridge Rd, Bradenton

Description and Scope

Install traffic signal with mast arm supports. Provide fiber optic communication related infrastructure and other Advance Traffic Management System (ATMS) devices. Includes addition of right turn lane extension in each direction on Lockwood Ridge Road from the new signal at the Shopping Center Entrance in a second phase.

Rationale

Traffic Engineering staff conducted traffic signal warrant study at this intersection (on Lockwood Ridge Road, just south of State Road 70 and at the entrance of Publix/Walmart) in response to citizen requests. The study included collecting traffic data (volume and crash) and a field review. Pursuant to the Manual on Uniform Traffic Control Devices (MUTCD), the criteria to install a traffic signal were met due to the reported crashes and traffic volumes. Currently, this intersection operates as a two-way stop control for the shopping center driveways. Based on the result of the study and field observations, an installation of a traffic signal is recommended for this intersection. The proposed project will connect to the existing fiber optic communication and install ATMS related infrastructure to monitor the signal from the Regional Traffic Management Center.

Project #: PJ6099861 **Status:** Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes Project Need: Growth

Project Location

District 4 Lockwood Ridge Road at 61st Ave E, Bradenton

Description and Scope

Evaluate, design, permit, and construct a traffic signal with mast arm assemblies with associated pedestrian crossings for all legs. Evaluate, design, permit, and construct turn lane improvements, as needed. In addition, install non-intrusive detection system, CCTV cameras, MVDS, and install fiber-optic connection to the TMC.

Rationale

There has been a steady growth of traffic in the area and is expected to continue with the ongoing growth throughout the County. As the area continues to develop and experience growth, the side street traffic is expected to experience higher delays due to increased traffic volume along Lockwood Ridge Road. Traffic signal control is expected to improve the overall operations and safety of the vehicles, pedestrians, and bicyclists in this area. Due to existing constraints, staff recommends installation of a mast arm traffic signal at this intersection to improve safety and operations for all users. In addition, this project also includes designing and constructing fiber-optic interconnect communication network from Lockwood Ridge Road along with other Advanced Traffic Management System (ATMS) devices such as a CCTV camera and Microwave Vehicle Detection System (MVDS) to provide connection back to the Traffic Management Center and provide better operational and monitoring capabilities.

Category: Transportation **Subcategory:** Intersections
Project Title: Port Harbour Parkway at Kay Road Intersection Improvements
Department: Public Works
Project Mgr: Derek O'Sullivan
Infra. Sales Tax: -
Project #: PJ6104660 **Status:** Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes Project Need: Growth

Project Location

District 5 Port Harbour Parkway at Kay Road, Bradenton

Description and Scope

Designed to connect to Kay Road over Cypress Strand Bridge/roundabout at the Port Harbour Parkway and Kay Road intersection, construct pedestrian ramps, crosswalks (with Rectangular Rapid-Flashing Beacons (RRFBs) for a roundabout option), resurface all approach lanes for re-striping for appropriate lane designation and appropriate signing and pavement markings.

Rationale

Port Harbour Parkway and Kay Road are both County thoroughfares. Port Harbour Parkway extension to Upper Manatee River Road was completed recently. With this connection with Upper Manatee River Road, there is more traffic anticipated along Port Harbour Parkway. The intersection of Upper Manatee River Road and Port Harbour Parkway will be signalized soon. Also, as Port Harbour Parkway is going to provide a parallel alternate route to SR 64, it is anticipated to bring more traffic on this corridor. The intersection of Port Harbour Parkway and Kay Road is currently a one-way stop controlled (for Port Harbour Parkway leg). With the anticipated increase in traffic, a traffic signal or a roundabout would provide needed traffic control at this intersection.

Project #: PJ6105060 **Status:** Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes Project Need: Growth

Project Location

District 4 Honore Avenue at Old Farm Road, Bradenton

Description and Scope

Design and construct a roundabout at the Honore Avenue and Old Farm Road intersection.

Rationale

Honore Avenue and Old Farm Road are classified as thoroughfare roads within the County's Comprehensive Plan. Under the existing conditions, the intersection of Honore Avenue and Old Farm Road is controlled by stop signs for all the approaches. During the peak periods, the intersection does not operate efficiently as the traffic entering the intersection has to stop before proceeding. There have been a steady growth of traffic in the area and this growth is expected to continue with the ongoing residential developments in the area. Staff is proposing to install a roundabout at this location which expected to improve the overall operations and safety of the vehicles, pedestrians, and bicyclists.

Project Title: Creekwood Boulevard Improvements SR 70 -73rd Street E
Department: Public Works
Project Mgr: Derek O'Sullivan
Infra. Sales Tax: Yes
Project #: PJ6105160 **Status:** Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: - Project Need: Growth, Deficiency

Project Location

District 5 52nd Place E and 73rd St E, Bradenton

Description and Scope

Reconstruct median at the 52nd Place E to restrict the left out movements and construct a roundabout at the 73rd Street E intersection.

Rationale

Creekwood Boulevard at 52nd Place E has a full median opening that serves the shopping center to the east of Creekwood Boulevard. During the peak periods and peak season, traffic has been observed to queue from the SR 70 intersection to the 52nd Place E intersection. Also, traffic is observed to queue on the east leg of 52nd Place E to wait for a gap in the traffic on Creekwood Boulevard. The conflicts create operational and safety concerns at and in the vicinity of this intersection. Due to the proximity of the Creekwood Boulevard and 52nd Place E intersection to the SR 70 intersection, a traffic signal is not feasible. Staff recommends restricting the left out movements at the 52nd Place E intersection and constructing a roundabout at the 73rd Street E intersection. This will allow to separate the conflicting movements at the 52nd Place E intersection and provide a safer alternative to access SR 70 from Creekwood Boulevard.

Project Title: Post Boulevard at 59th Ave E Intersection Improvements
Department: Public Works
Project Mgr: Derek O'Sullivan
Infra. Sales Tax: -
Project #: PJ6107161 **Status:** Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes Project Need: Growth

Project Location

District 5 Post Boulevard at 59th Ave E, Bradenton

Description and Scope

Evaluate, design, permit, and construct a span wire traffic signal with concrete assemblies with associated pedestrian crossings for all legs. Evaluate, design, permit, and construct turn lane improvements (adding or extending), as needed. In addition, install non-intrusive detection system, CCTV cameras, MVDS, and install fiber-optic connection to the TMC.

Rationale

Surrounded by major generators such as Premier Sports Campus, Lakewood National, Esplanade and other proposed residential and mixed uses such as, East County Library and Aquatic Center, there has been a steady growth of traffic in the area and this growth is expected to continue in the future. Staff is proposing to evaluate and install a traffic signal at this location. Staff recommends installation of an interim span wire traffic signal at this intersection with a 10-15 year lifespan to improve safety and operations for all users. The traffic signal is expected to improve the overall operations and safety of the vehicles, pedestrians, and bicyclists in the vicinity. In addition, staff recommends including ATMS infrastructure such as fiber, CCTV camera and MVDS to provide connection back to the Traffic Management Center and provide better operational and monitoring capabilities.

Project Title: 75th Street W at Manatee Ave - Turn Lane Improvements
Department: Public Works
Project Mgr: Tony Russo
Infra. Sales Tax: Yes
Project #: PJ6108261 **Status:** Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes Project Need: Growth

Project Location

District 3 75th Street W at Manatee Ave W, Bradenton

Description and Scope

Design, permit, and construct an additional southbound left turn lane on 75th Street W, potentially a dedicated northbound right turn lane, and signal improvements to accommodate southbound dual left turn lanes and potentially the northbound dedicated right turn lane. The design phase should include evaluating whether to construct a dedicated northbound right turn lane or if the combined through/right turn lane option is preferable. Design to include pedestrian/bicycle and stormwater improvements where applicable. Modification of existing approach lanes, as needed, to accommodate the additional turn lanes. Both steel mast arm assemblies may need to be relocated/replaced. Land acquisition will be required.

Rationale

Turn lane improvements are desired at the 75th Street W and Manatee Ave intersection to improve traffic circulation. This is in addition to and will compliment the 75th St W - 20th Ave W to Manatee Ave W (CIP Project #6108260) widening project, south of Manatee Ave. These improvements are expected to improve the level of service at the intersection.

Project Title: Player's Drive at Lorraine Road Intersection Improvements and ATMS
Department: Public Works
Project Mgr: Derek O'Sullivan
Infra. Sales Tax: -
Project #: PJ6109060 **Status:** Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes Project Need: Growth

Project Location

District 5 Player's Dr at Lorraine Rd, Bradenton

Description and Scope

Construct a traffic signal with pedestrian crossings on all four legs, along with ATMS equipment (CCTV cameras, MVDS detectors, Bluetooth devices). Work includes the extension of the North bound right, South bound left and right turn lanes on Lorraine Road.

Rationale

Under the existing conditions, the intersection of Player's Drive and Lorraine Road is stop-controlled for the eastbound and westbound (Player's Drive) approaches. There has been a steady growth of traffic in the area and this growth is expected to continue with the ongoing residential developments and new schools in the area. As the area continues to develop and experience growth, the side street traffic is expected to experience higher delays due to increased traffic volume along Lorraine Road. Based on a traffic study, the warrants to install a traffic signal at this intersection were met. Staff recommends installing a traffic signal along with pedestrian crossing features and extend turn lanes as needed. The selected traffic control is expected to improve the overall operations and safety of the vehicles, pedestrians, and bicyclists in this area.

Project Title: Tuttle Avenue at Whitfield Avenue Intersection Improvements
Department: Public Works
Project Mgr: Marcenel Joseph
Infra. Sales Tax: -
Project #: PJ6109160 **Status:** Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: - Project Need: Growth

Project Location

District 4 Tuttle Ave at Whitfield Ave., Bradenton

Description and Scope

Design and construct a roundabout at the Tuttle Avenue and Whitfield Avenue intersection, construct pedestrian ramps, crosswalks with Rectangular Rapid Flashing Beacons (RRFBs) on all approaches, resurface all approach lanes for restriping for appropriate lane designation and appropriate signing and pavement markings.

Rationale

Tuttle Avenue Extension project was completed by the County around two years ago. This project added the fourth leg (south leg) to the intersection of Tuttle Avenue and Whitfield Avenue, while connecting residential neighborhoods to the south. There has been an increase in the traffic volume at this intersection since the Tuttle Avenue Extension was completed. This is an intersection of two County thoroughfares currently operating as a four-way stop intersection. There is some crash history at this intersection in the past few years.

Project Location

District 1 Artisan Lakes Parkway, Palmetto

Description and Scope

Design, permit, and construct roundabout intersection improvements along Artisan Lakes Pkwy at Cobble Park Pl, Seasons Way, and Maidenstone Way. Review, approve and process pay application pursuant to the developer agreement.

Rationale

Artisan Lakes Pkwy is a future collector thoroughfare per the County's 2045 Future Traffic Circulation Functional Classification (Map 5-B). Due to existing and future growth anticipated in the area, traffic demand is expected continue to increase along Artisan Lakes Pkwy. Staff recommend installing roundabouts the Cobble Park Pl, Seasons Way, and Maidenstone Way intersections to ensure efficient and safe traffic circulation for all users. This project is to fund the developer's agreement for the reimbursement of cost incurred for the design, permitting, and construction of the roundabouts by the developer.

Project Need: Growth, Deficiency

Project Location

District 3 SR 789 at Broadway, Longboat Key

Description and Scope

Preliminary engineering has been complete to the point of determining the roundabout is an acceptable and preferred intersection configuration per the Intersection Control Evaluation study. The project includes a single-lane roundabout.

Rationale

Manatee County seeks to provide final design for a roundabout to replace the existing side-street stop-controlled intersection of SR 789 and Broadway in the Town of Longboat Key. Completion of final design will improve the production-readiness of the improvement so the construction phase may favorably compete for funding through Metropolitan Planning Organization processes or for Federal grants.

Project Title: 43rd St W at Manatee Ave Intersection Improvement Project
Department: Public Works
Project Mgr: Albert Rosenstein
Infra. Sales Tax: Yes
Project #: PJ6112460 **Status:** Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes Project Need: Growth

Project Location

District 3 43rd St W at Manatee Ave W, Bradenton

Description and Scope

Analyze the intersection and determine the recommended improvements for the intersection. The analysis should include FDOT coordination/ICE, pedestrian movements and safety, and future growth from anticipated developments. Evaluate additional left turn lanes (dual left turn lanes) and right turn lanes for both northbound and southbound. Turn lane length and signal timing should also be considered. Design, permit, and construct the recommended improvements. The design should account for the future 4 lanes of the south leg of the intersection. Replace/update traffic signal as needed to accommodate the improvements. Project will likely require right-of-way acquisition.

Rationale

The operation of the intersection for northbound and southbound left turns is not ideal. This project will analyze the intersection operation; determine recommended improvements; and design, permit, and construct the recommended improvements. This project will improve the capacity and operational efficiency at the 43rd St W and Manatee Avenue signalized intersection.

Department: Public Works
Project Mgr: Derek O'Sullivan
Infra. Sales Tax: -
Project #: PJ6113160 **Status:** Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes Project Need: Growth

Project Location

District 5 White Eagle Boulevard at Crossland Trail Intersection, Bradenton

Description and Scope

Design and construct the signalization of White Eagle Boulevard and Crossland Trail intersection, extension of the a southbound right and left turn lane on White Eagle Boulevard, eastbound left turn lane on Crossland Trail and overhead school zone signs as shown in the approved plans. This project has an associated developer's agreement with the terms and conditions related to the reimbursement of 60% of the costs related to these intersection improvements.

Rationale

A new charter school is proposed at northwest corner of White Eagle Boulevard and Crossland Trail and is known as Lakewood Ranch Charter School. Traffic demand is anticipated to increase due to the new school and thus required certain improvements to the intersection. An operational analysis was completed for the school and it was determined that the school's proportionate fair share for the intersection improvements is 38.5%. The County has agreed to participate in 60% of the cost of said improvements with the developer to pay the remaining 40%.

Project Title: Spencer Parrish Road Realignment (NN Road)
Department: Public Works
Project Mgr: Scott May
Infra. Sales Tax: -
Project #: PJ6113260 **Status:** Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: - Project Need: Growth

Project Location

District 1 Golf Course Road at Spencer Parrish Road, Parrish

Description and Scope

Design, engineer, permit, and construct roadway and roundabout improvements depicted in the LDA, to include (i) the east-west roadway extending from the residential from the development west to Spencer Parrish Road; (ii) the north-south roadway extending from Golf Course Road to the northern terminus of the roundabout including southbound turn lanes; and (iii) an eastbound left turn lane and a westbound right turn lane at the intersection of Golf Course Road and the realigned Spencer Parrish Road (iv) signalize intersection of Golf Course Road and the realigned Spencer Parrish Road.

Rationale

Spencer Parrish Road is a future collector throughfare per the County's 2024 Future Traffic Circulation Maps (Map 5 Series), from Golf Course Road to FF Road. The County desires to realign Spencer Parrish Road to improve safety and traffic circulation since the road intersects Golf Course Road at a significant skewed angle. A residential development, SM Ranch, proposes to provide its second means of access from Spencer Parrish Road and has entered into a Local Development Agreement (LDA) with the County to accomplish the reconfiguration of the skewed intersection.
Per the LDA, the County is to reimburse the developer one-half of the costs of the proposed realignment/roundabout costs less the estimate for the developer to construct a second means of access to the development to Spencer Parrish Road. The remaining one-half of costs are impact fee credit eligible.

Project Title: Rye Road at Witt Elementary (158th St E) Intersection Improvements
Department: Public Works
Project Mgr: Derek O'Sullivan
Infra. Sales Tax: -
Project #: PJ6115560 **Status:** Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: Yes Project Need: Growth

Project Location

District 1 Rye Road at Witt Elementary (158th St E)

Description and Scope

Evaluate, design, permit, and construct a span wire traffic signal at the Rye Road/Witt Elementary intersection and an emergency-vehicle traffic control span wire signal at the fire station utilizing concrete strain poles. Design should have wireless communication with copper interconnection between signals, non-intrusive radar detection system, CCTV camera, Microwave Vehicle Detection System (MVDS), pedestrian improvements, and intersection lighting.

Rationale

The Rye Road/Witt Elementary (158th Street E) intersection is inefficient with the entering traffic. Also, immediately north of the intersection the East Manatee Fire District Station 3 is experiencing less than adequate traffic gaps to take access to Rye Road. Installing a traffic signal control is expected to improve operations and safety for vehicles, pedestrians, and bicyclists. The project will include upgrading the existing emergency warning signs to an emergency vehicle traffic control signal to allow for direct emergency vehicle access to Rye Road.

Project Title: 9th Avenue NW Roundabout
Department: Public Works
Project Mgr: Al Neumann
Infra. Sales Tax: Yes
Project #: PJ6116860
Status: Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes
Project Need: Growth

Project Location

District 3 9th Ave NW, Bradenton

Description and Scope

Reconstruct the intersection of 9th Ave NW and 78th St NW as a raised intersection, and resurface and restripe the existing roadway between 78th St NW and 75th St W to reduce lane widths and to add bike lanes. In addition, a 10-foot sidewalk will be designed and constructed on the north side of the road in this segment.

Rationale

The existing vehicle lane widths between 78th St NW and 75th St NW are very wide which contributes to excessive vehicle speeds, making it unsafe for all users. Due to the success of Robinson Preserve, traffic volumes for all users are increasing on 9th Ave NW. There are also several schools in the area and students use 9th Ave NW to get to and from school. The proposed improvements are intended to improve safety for all users by reducing vehicle speeds, adding marked bike lanes, and providing off-street pedestrian facilities.

Project Location

District 2 15th St E at 57th Ave E, Bradenton

Description and Scope

Design, permit and construct a roundabout at the intersection of 15th Street East and 57th Avenue East.

Rationale

The intersection, which is currently signalized, is part of 15th Street East Project Development and Environment (PD&E) study and has been identified as feasible location for a roundabout. The segment comprising this intersection has been the County's MPO priority project for several years. The project will improve intersection safety and efficiency.

Department: Public Works
Project Mgr: Phil Catalano
Infra. Sales Tax: -
Project #: PJ6117861 **Status:** Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: - Project Need: Maintenance, Deficiency

Project Location

District 4 Whitfield Ave & Pearl Ave at US 41, Sarasota 34243 (Manatee County)

Description and Scope

Design, permit, install, and construct (i) pavement resurfacing of Whitfield Ave, from US 41 to 9th St E, and Pearl Ave, from US 41 to Willow St; (ii) buffered bike lanes (in both directions) on Whitfield Ave, from Manatee St to 9th St E, and Pearl Ave, from Manatee St to Willow St; (iii) speed management measures for both vehicles and pedestrians; and (iv) a mini roundabout at the Whitfield Ave/Pearl Ave and Willow St intersection.

Rationale

In addition to the resurfacing needs, the roadways experience significant amount of traffic from US 41 to 9th St E and to address crash trends and speeding concerns from the residents, staff recommend implementing traffic calming measures using the Safe Systems Approach methodology along with installing a mini roundabout at the Whitfield Ave/Pearl Ave and Willow St intersection. This project is expected to improve traffic operations and safety while preserving the neighborhood's character while accommodating all road users.

Project Title: CR 675 at Rye Road Intersection Improvements
Department: Public Works
Project Mgr: Derek O'Sullivan
Infra. Sales Tax: -
Project #: PJ6118360 **Status:** Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes Project Need: Growth

Project Location

District 1 CR 675 at Rye Road, Parrish

Description and Scope

Design and construct a span wire traffic signal at the CR 675 and Rye Road intersection, add/lengthen turn lanes, intersection lighting, construct pedestrian ramps and crosswalks. The traffic signal will be a diagonal span wire design and provide wireless communication to connect traffic signal to the County's central signal system software.

Rationale

Under the existing conditions, the intersection of CR 675 and Rye Road is stop-controlled for the northbound and southbound (Rye Road) approaches. There has been a recent increase of angle type crashes at this intersection. As the area continues to develop and experience growth, the side street traffic is expected to experience higher delays due to increased traffic volume along CR 675. Due to traffic operations and safety at this intersection, staff recommends installing a span wire traffic traffic signal with turn lane improvement, intersection lighting along with pedestrian crossing features.

Project #: PJ6118361 **Status:** Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: No Project Need: Growth

Project Location

District 1 Rye Road at County Road 675, Parrish

Description and Scope

Evaluate appropriate intersection control for the Rye Road/County Road 675 intersection. Design, permit, and construct improvements based on the recommended intersection control for a four-lane Rye Road and County Road divided typical section that will accommodate up to a future six-lane County Road 675 (if feasible) along with the northern extension of Rye Road to connect to the southern terminus of Rye Road being constructed as part of the Riversong/Lazy C Ranch development. The project will also stormwater, pedestrian, and intersection lighting improvements. Design to include coordination with Riversong/Lazy C Ranch development to for the north leg extension tie-in and evaluation on appropriate means for the ditch crossing. Land acquisition is anticipated.

Rationale

Rye Road and County Road 675 are future arterial thoroughfares per the County's 2045 Future Traffic Circulation Plan (Map 5 Series) and intersect with each other. With the
future widening of North Rye Road there is need to buildout this intersection to improve safety, capacity, and traffic circulation as well as extend Rye Road to the north. This intersection improvement is covered in a Local Development Agreement (LDA) with Rye Ranch for the design and construction of the future buildout of the intersection. This project is to fund the developer's agreement for the design, permitting, and construction of the intersection improvements.

Project #: PJ6118460 **Status:** Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes Project Need: Growth

Project Location

District 1 US 41 at 69th Street East, Palmetto

Description and Scope

Design, permit, install, and construct intersection signal and lighting modifications, turn lanes, road striping, and associated storm-water drainage and sidewalk improvements on the east leg of the intersection of US Hwy 41 and 69th Street East and improvements to the access to US Hwy 41 along 39th Circle East. Land acquisition is required for the 39th Circle East improvements. There is an associated developer's agreement for this project.

Rationale

Because of growth and increased traffic in the area, the County desires to add a westbound right turn lane and related traffic signal improvements on 69th Street East at US Hwy 41, which will increase the capacity of the intersection. As this intersection is adjacent to a planned convenience store commercial development, the developer has agreed to construct the growth-related improvements. This project will improve the traffic circulation in the area and is not required nor attributable to the development. This portion of the project is eligible to be funded by impact fees.

Project Title: 44th Avenue E and Wood Fern Trail Mast Arm
Department: Public Works
Project Mgr: Vishal Kakkad
Infra. Sales Tax: Yes
Project #: PJTP25040 **Status:** Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes Project Need: Growth

Project Location

District 5 44th Avenue E and Wood Fern Trail, Lakewood Ranch

Description and Scope

Construct a traffic signal with mast-arm structure with pedestrian crossings on all legs, add/lengthen turn lanes, install non-intrusive detection system, CCTV camera, MVDS and install fiber-optic connection (from Lakewood Ranch Boulevard to White Eagle Boulevard) to establish communication with the Traffic Management Center.

Rationale

The intersection of 44th Avenue E and Wood Fern Trail currently operates under Stop-control for the side street approaches (Wood Fern Trail/Great Park Boulevard). With 44th Ave E now extended further east up to Bounrneside Boulevard, combined with major developments near this intersection, including elementary and middle schools, there has been a steady growth of traffic in the area and this growth is expected to continue in the future. The traffic signal is expected to improve the overall operations and safety for all users. In addition, including ATMS infrastructure such as fiber, CCTV camera and MVDS to provide connection back to the Traffic Management Center and to enable better operational and monitoring capabilities.

Project Title: 75th St W at Manatee Ave W Northbound Right Turn Lane
Department: Public Works
Project Mgr: Tony Russo
Infra. Sales Tax: -
Project #: PJTP25062 **Status:** Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: - Project Need: Growth

Project Location

District 3 75th St W at Manatee Ave, Bradenton

Description and Scope

Design, permit, and construct a northbound right turn lane at the 75th St W/Manatee Ave intersection. Design to include pedestrian/bicycle and stormwater improvements, utilities relocations, and tree removal. Modification of existing approach lanes to accommodate the turn lane. Mast arm assemblies may need to be relocated/replaced. Land acquisition will be required.

Rationale

A northbound right-turn lane is desired at the 75th Street W and Manatee Ave intersection to improve traffic circulation. This is in addition to and will complement the 75th St W - 20th Ave W to Manatee Ave W (CIP Project #6108260) widening project, south of Manatee Ave. These improvements are expected to improve the level of service, safety, and operations at the intersection.

Project Title: Buckeye Rd at US 301 Intersection Improvements
Department: Public Works
Project Mgr: Jeff Streitmatter
Infra. Sales Tax: -
Project #: PJTP26025 **Status:** Requested

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: - Project Need: Growth

Project Location

District 1 Buckeye Rd at US 301, Parrish

Description and Scope

Evaluate, design, permit, and construct a span wire traffic signal at Buckeye Rd and US 301 Avenue with non-intrusive detection system, pedestrian features, CCTV camera and wireless switch improvements.

Rationale

The Buckeye Rd at US 301 is a three-legged intersection with stop-controlled approach on Buckeye Road. There has been sustained growth of traffic in the area, as the area continues to develop the side street traffic is expected to experience higher delays. Further, FDOT does not have plans in their 5-year work program to signalize this intersection thus there is a need to provide a span wire traffic signal at this intersection (10-15 years). The traffic signal is expected to improve safety and overall operations at this intersection.

Project Title: Moccasin Wallow Rd at I-75 Ramps - Interim Signals
Department: Public Works
Project Mgr: Jeff Streitmatter
Infra. Sales Tax: -
Project #: PJTP26027 **Status:** Requested

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: - Project Need: Growth

Project Location

District 1 Moccasin Wallow Rd at I-75 Ramps, Palmetto

Description and Scope

Evaluate, design, permit, and construct span wire traffic signals at both I-75 ramp intersections on MWR with non-intrusive detection system, pedestrian features, CCTV camera, and wireless switch improvements.

Rationale

Moccasin Wallow Rd (MWR) is a key East/West roadway in north County with access to I-75 and is being expanded to a 4-lane divided road from US 41 to US 301. The I-75 ramp intersections on MWR have seen steady traffic growth and meet signal warrant criteria. However, FDOT does not have plans in their 5-year work program to signalize the intersections, thus there is a need to provide a span wire traffic signal at this intersection (10-15 yrs). The traffic signals are expected to enhance operations and improve safety for the intersections.

Project Title: Lockwood Ridge Rd at SR 70 Intersection Improvements
Department: Public Works
Project Mgr: -
Infra. Sales Tax: -
Project #: PJTP26029 **Status:** Requested

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: - Project Need: Growth

Project Location

District 5 Lockwood Ridge Road at SR 70, Bradenton

Description and Scope

Design, permit, and construct modifications to the existing northbound approach lanes on Lockwood Ridge Rd to provide an additional northbound through lane. Design to include pedestrian/bicycle accommodations, striping modifications, drainage and utility adjustments, and traffic signal modifications to accommodate the new approach configuration. All proposed improvements will occur within existing County right of way; therefore, land acquisition will not be required.

Rationale

Lockwood Ridge Rd is a future arterial throughfare that carries a significant amount traffic from University Pkwy to SR 70. With sustained growth of traffic in the area, and being surrounded by numerous attractors, the northbound traffic at this intersection experiences higher delays and long queues during peak hours. This project modifies the existing approach lanes to provide an additional northbound through lane. These improvements are expected to improve traffic operations and safety at the intersection.

Department: Public Works
Project Mgr: Jeff Streitmatter
Infra. Sales Tax: Yes
Project #: PJTP26064 **Status:** Requested

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: No Project Need: Growth

Project Location

District 5 University Pkwy at Covenant Way, Lakewood Ranch

Description and Scope

Design, permit, and construct a two-lane roundabout at the intersection of University Parkway and Covenant Way.

Rationale

Due to the widening of University Parkway, intersection improvements are required at Covenant Way. A roundabout is being constructed in coordination with the Lakewood Ranch Stewardship District, which is funding the widening. These improvements are necessary to accommodate increased traffic volumes, enhance safety, and maintain efficient operations at the intersection. The project aligns with County roadway design standards and long-term transportation planning goals. The County agrees to pay 35% of the difference of cost between a roundabout and a standard signalized intersection with turn lanes.

Project Title: Carter/Sawgrass Road Extension with Erie Road Roundabouts
Department: Public Works
Project Mgr: Jeff Streitmatter
Infra. Sales Tax: Yes
Project #: PJTP26069 **Status:** Requested

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: No Project Need: Growth

Project Location

District 1 Carter Road at Erie Road, Parrish

Description and Scope

Design, permit, and construct (i) the outside two lanes of Carter Road, from it current terminus south to Erie Road, (ii) a roundabout at the Sandy Shores Street intersection, (iii) a roundabout at the northeast corner of the property owned by Bradenton Christian School Society, Inc., (iv) street lighting for Carter Road from Moccasin Wallow Road to Erie Road, (v) the "oversizing" of a local road from Carter Road to Sawgrass Road south of Buffalo Canal with a multiuse path along the north side. This project also includes Roundabouts at Carter Rd/Erie Road and Sawgrass Erie Road intersection.

Rationale

Carter Road and Sawgrass Road are future collector thoroughfares per the County's 2045 Future Traffic Circulation Plan (Map 5 Series) from Erie Road to Buckeye Road. Due to current and future growth in the surrounding area, there is a need to extend the existing Carter Road and Sawgrass Road termini to connect to Erie Road to improve safety and traffic circulation. This project request is for a portion of an overall larger developer construction agreement that includes the design, permitting, and construction of roadway improvements for Carter Road and Sawgrass Road and related transportation and stormwater improvements This project is part of an overall project that includes funding via impact fee credit, reimbursement, and CIP Project number PJ6111360. This project request is to fund the reimbursement portion of the developer's agreement for the Carter Road extension to Erie Road (approximately 50% of the costs).

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: Yes Project Need: Growth

Project Location

District 4 53rd Ave W and 30th St W, Bradenton

Description and Scope

Construct a traffic signal with mast-arm structure with pedestrian crossings on two legs and implement Flashing Yellow Arrow (FYA) for EB movement, install non-intrusive detection system and a CCTV camera, resurface all approach lanes and install appropriate signing and pavement markings.

Rationale

53rd Ave W is a thoroughfare with an Average Annual Daily Traffic (AADT) of over 23,000 vehicles per day (vpd), and a designated Evacuation Route. There has been a steady growth of traffic in the area and this growth is expected to continue with the proposed major developments in the area. This span-wire intersection is within the Mast-Arm Boundary Map defined by FDOT, which states that signals within this boundary are to be supported by galvanized mast-arm structure to withstand possible high winds from the coast. Staff recommends upgrading the signal with mast-arm supports along with pedestrian crossing features. In addition, this project includes upgrading the existing loop detection system to non-intrusive detection system and addition of a CCTV camera to enhance traffic operations and monitoring capabilities.

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: Yes Project Need: Growth

Project Location

District 4 53rd Ave W and 34th St W, Bradenton

Description and Scope

Traffic Signal and pedestrian upgrades to add separate ADA ramps in each corner, special emphasis crosswalks, implement LPI, upgrade intersection lighting, implement Flashing Yellow Arrow (FYA) for EB/WB movements, and RT overlap phasing for NB, SB, and EB movements.

Rationale

53rd Ave W is a designated Evacuation Route while 34th St W is thoroughfare that connects 53rd Ave W to two major arterials, Manatee Avenue and Cortez Road. As 53rd Ave W is one of the major routes providing connection to the beaches, this corridor experiences significant traffic through most part of the year, especially during weekends. There has been a steady growth of traffic in the area and this growth is expected to continue with the proposed major developments in the vicinity. Staff recommends upgrading the traffic signal with the recommended safety enhancements including pedestrian ramps and crossing features.

Project Title: Lakewood Ranch Blvd at East Manatee Fire District Station 1
Department: Public Works
Project Mgr: Jeff Streitmatter
Infra. Sales Tax: Yes
Project #: PJTR02281 **Status:** Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes Project Need: Growth

Project Location

District 5 Lakewood Ranch Blvd at East Manatee Fire District Station 1, Bradenton

Description and Scope

Design and construct an emergency traffic signal with mast-arm structures and deploy fiber-optic infrastructure to establish communication with the Traffic Management Center.

Rationale

Lakewood Ranch Boulevard is a County Thoroughfare. There has been a steady growth of traffic in the area and is expected to continue with the ongoing growth throughout the county. As the area continues to develop and experience growth, gaps in traffic are becoming less adequate to permit the timely entrance of emergency vehicles. Staff recommends installing an emergency-vehicle traffic control signal to allow for direct emergency vehicle access to Lakewood Ranch Boulevard at East Manatee Fire District Station 1 egress only intersection.

Project Title: Lakewood Ranch Boulevard at Gatewood Drive - Roundabout
Department: Public Works
Project Mgr: Jeff Streitmatter
Infra. Sales Tax: Yes
Project #: PJTR02283 **Status:** Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes Project Need: Growth

Project Location

District 5 Lakewood Ranch Boulevard at Gatewood Drive, Bradenton

Description and Scope

Design and construct a roundabout at the Lakewood Ranch Boulevard and Gatewood Drive intersection, construct pedestrian ramps, crosswalks with RRFBs on all approaches, resurface all approach lanes for restriping for appropriate lane designation and appropriate signing and pavement markings.

Rationale

With the increase in traffic, a roundabout would provide needed traffic control at this intersection along with implementing a safe systems approach. During the peak periods, the intersection does not operate efficiently as the traffic entering the intersection has to stop before proceeding. There has been a steady growth of traffic in the area and this growth is expected to continue with the ongoing developments in the area. Staff is proposing to install a roundabout at this location which expected to improve the overall operations and safety of the vehicles, pedestrians, and bicyclists.

Project #: PJTR02284 **Status:** Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes Project Need: Growth

Project Location

District 5 Lakewood Ranch Boulevard at Portal Crossing, Bradenton

Description and Scope

Construct a traffic signal with mast-arm structures with pedestrian crossings on all legs, add/lengthen turn lanes, modify median opening north of the intersection, install non-intrusive detection system, CCTV camera, MVDS and deploy fiber-optic infrastructure to establish communication with the Traffic Management Center.

Rationale

Access management improvements will consist of construction of raised medians to restrict turning movements within the vicinity of the new traffic signal. Traffic Signal control is expected to improve the overall operations and safety of the vehicles, pedestrians, and bicyclists in this area. The proposed project will connect to the existing fiber-optic communication network and provide other Advanced Traffic Management System (ATMS) devices such as a CCTV camera and MVDS to provide connection back to the Traffic Management Center and provide better operational and monitoring capabilities.

Project Title: White Eagle Blvd at Serenity Run/Filmore Run Intersection Improvements
Department: Transportation Capital Project
Project Mgr: Jeff Streitmatter
Infra. Sales Tax: Yes
Project #: PJTR02286 **Status:** Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: - Project Need: Growth

Project Location

District 5 White Eagle Blvd at Serenity Run/Filmore Run, Bradenton

Description and Scope

Evaluate a traffic signal or a roundabout option, and design and construct a traffic signal/roundabout at the White Eagle Boulevard and Serenity Run/Filmore Run intersection, construct pedestrian ramps, crosswalks (with RRFBs for a roundabout option), resurface all approach lanes for restriping for appropriate lane designation and appropriate signing and pavement markings.

Rationale

White Eagle Bouldevard is a County Thoroughfare. The White Eagle Boulevard extension to State Road 64 was recently completed. With this connection with State Road 64, there is more traffic anticipated along White Eagle Boulevard. The intersection of White Eagle Blvd and Serenity Run/Filmore Run is currently stop-controlled for the northbound and southbound (Serenity Run/Filmore Run) approaches. With the anticipated increase in traffic due to the recent connection and as the area continues to develop and experience growth, a traffic signal or a roundabout would provide needed traffic control at this intersection.

Project Title: University Parkway at Legacy Blvd/Deer Drive Roundabout
Department: Public Works
Project Mgr: Jeff Streitmatter
Infra. Sales Tax: Yes
Project #: PJTR02287 **Status:** Requested

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: No Project Need: Growth

Project Location

District 5 University Parkway at Legacy Blvd, Lakewood Ranch

Description and Scope

Design, permit, and construct a two-lane roundabout at the intersection of University Parkway and Legacy Boulevard. Project includes construction phase engineering services.

Rationale

University Parkway is a County maintained thoroughfare that the County has jurisdiction for approving improvements within its right-of-way. Sarasota County has a development of regional impact (DRI), known as Lakewood Ranch Corporate Park, located at the southeast quadrant of the intersection of Interstate 75 and University Parkway (the “Sarasota DRI”). The Sarasota DRI’s transportation impact mitigation includes capacity improvements to the signalized intersection of University Parkway and Legacy Boulevard (Deer Drive). This intersection has traffic signal infrastructure approaching end-of-life and requires capacity improvement independent of the Sarasota DRI mitigation, which will prompt the County to reconstruct the intersection. The County and developer agree reconstructing the intersection as a two-lane roundabout in a single undertaking is a desirable and efficient way to address general Intersection needs and Sarasota DRI transportation impact mitigation. The project is to fund the developer’s agreement for 50% of the costs to design, permit, and construct the roundabout.

Project #: PJTR02289 **Status:** Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: - Project Need: Growth

Project Location

District 5 SR 70 at Uihlein Road, Bradenton

Description and Scope

Design and construct a span wire traffic signal at the SR 70 and Uihlein Road intersection, construct pedestrian ramps, crosswalks. The traffic signal will be a diagonal span wire design and provide wireless communication to connect traffic signal to the County's central signal system software.

Rationale

The Florida Department of Transportation (FDOT) is currently in design of aroundabout at this intersection. County staff had this intersection on a list of a potential traffic signals in the future especially, since Uihlein Road is connected to SR 64. While FDOT staff is formalizing the ultimate roundabout design, County staff have coordinated with FDOT staff and expressed the desire to expedite the installation of a span wire traffic signal to improve traffic operations and safety at this intersection until the ultimate improvements are constructed by FDOT.

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes Project Need: Growth

Project Location

District 5 Rangeland Parkway at Post Boulevard, Bradenton

Description and Scope

Construct a traffic signal with mast-arm structure with pedestrian crossings on all legs, install non-intrusive detection system, CCTV camera, MVDS and deploy fiber-optic infrastructure (from Lorraine Road to Uihlein Road) to establish communication with the Traffic Management Center.

Rationale

Surrounded by major generators such as Premier Sports Campus, Lakewood National, Esplanade and other proposed residential and mixed use such as, East County Library and Aquatic Center, there has been a steady growth of traffic in the area and this growth is expected to continue in the future. Staff is proposing to evaluate and install a traffic signal at this location. The traffic signal is expected to improve the overall operations and safety of the vehicles, pedestrians, and bicyclists in the vicinity. In addition, staff recommends including ATMS infrastructure such as fiber, CCTV camera and MVDS to provide connection back to the Traffic Management Center and provide better operational and monitoring capabilities.

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes Project Need: Growth

Project Location

District 5 SR 64 at 117th Street E, Bradenton

Description and Scope

Design and construct southbound left and right-turn lanes with associated traffic signal upgrades to implement Flashing Yellow Arrow (FYA) for northbound and southbound movements at the SR 64 and 117th Street East intersection. Additional traffic signal indications will be designed to be added to the existing box span wire.

Rationale

SR 64 is one of the major routes within the County and this corridor experiences significant traffic through most part of the year. There has been a steady growth of traffic in the area and this growth is expected to continue with the proposed major developments in the vicinity. Staff recommends upgrading the traffic signal with the recommended capacity enhancements to maximize operations at this intersection.

Project Title: 15th Street E from 63rd Ave E to 59th Ave E
Department: Public Works
Project Mgr: Eddy Zappacosta
Infra. Sales Tax: No
Project #: PJ6001861 **Status:** Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: No Project Need: Growth, Deficiency

Project Location

District 2 15th Street East 63rd Ave to 59th Ave E, Bradenton

Description and Scope

Design and permit functional roadway improvements to 15th St E from south of 63rd Ave E to South of 51st Ave E, updating FDOT's current design, including but not limited to: (i) maintaining existing opening drainage system with minimum piping where land is constrained, (ii) provide a multiuse path and sidewalk (no bike lanes), (iii) access management improvements for existing driveway, (iv) review pavement-to-base season high water table (SHWT) clearance and 100-year flood conditions along the corridor, and (v) minimize right-of-way acquisitions to the greatest extent possible while meeting the project purpose. Due to state funding, state standards, regulations, and requirements must be applied.

Rationale

The Florida Department of Transportation (FDOT) completed a Project Development and Environmental (PD&E) study in 2016 for 15th St East (301 Blvd E) from Tallevast Road to US 41. The FDOT's consultant produced 60% plans for the overall project limits with the plan being to move forward with the Segment 2 plans with Segments 1 & 3 being put on hold until future funding is available. Segment 2 was further divided into subsegments 2A, 2B, and 2C. However, because of anticipated business impacts and FDOT's inability to secure right-ofway from an off-network roadway, the project was transferred to the County as Local Agency Program (LAP) project with funding participation by FDOT. The purpose of this project is design and permit roadway improvements to improve mobility, accessibility, and to provide safer travel conditions for all users within the limits of the Segment 2. The overall project is identified as a financially feasible transportation project in the Sarasota/Manatee Metropolitan Planning Organization's (MPO's) 2045 Long Range Transportation Plan (LRTP) and is included the FDOT's 5 Year Work Program (Item Numbers: 431350-6,7,8).

Project Title: Myakka Rd - Culvert 174149 Replacement
Department: Public Works
Project Mgr: Gil Bullock
Infra. Sales Tax: -
Project #: PJ6021762
Status: Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: -
Project Need: Deficiency

Project Location

District 1 Myakka Rd over Branch of Myakka River, Myakka City

Description and Scope

The scope includes design, permitting, project management and construction of a new culvert on Myakka Rd over Branch of Myakka River. The new culvert will be approximately 30 ft. long x 40 ft. wide. It is anticipated that the new culvert will be built with a full road closure. The roadway geometry will remain unchanged and the structure footprint will be similar to the existing culvert. The new culvert will maintain similar hydraulic capacity and be designed to the current Standards. No Land acquisition is anticipated.

Rationale

The County was notified on 05/25/2023 that an existing culvert under Myakka Rd had severe structural issues. Road plates were installed over the culvert to prevent road closure which would result in a 14 mile detour. Myakka Rd is critical for residential, agricultural and equestrian traffic. Ownership of the culvert was established through an interlocal agreement with Sarasota County. Fifty percent of the project cost will be reimbursed by Sarasota County. This culvert will be replaced with a similar metal pipe structure or concrete box culverts to restore the structural capacity and improve public safety.

Project Title: Lincoln Park Pedestrian Bridge
Department: Public Works Projects
Project Mgr: Justin Rourk
Infra. Sales Tax: -
Project #: PJ6023513
Status: Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes
Project Need: Deficiency

Project Location

District 2 US 41 at 17th Street East, Palmetto

Description and Scope

Design and permit a pedestrian bridge across the US 41/17th Street East intersection. Per FDOT direction, design is required to have an Independent Project Review (IPR) through a separate firm and contract; foundations outside of FDOT rights-of-way are to be reviewed by FDOT; the design must meet FDM criteria and have full review through FDOT District One. As project is being funded with federal grant award and across a FDOT facility, all federal and state requirements must be followed.

Rationale

The purpose of this project is to provide a safe and effective way for bicyclists and pedestrians to cross the US 41 corridor via a pedestrian bridge to improve access to Lincoln Park, the Lincoln Middle School, and the community in general. The county recently constructed a swimming pool and renovated the park in this underserved community bifurcated by US 41 in Manatee County, Florida. The goal of the project is to improve local mobility and improve access to Lincoln Park and its amenities and the Lincoln Middle School. Providing a safer route and access to Lincoln Park will foster community strong communities, improve local connectivity, and enhance the quality of life for the residents of the underserved area. The design will be partially funded by a $950,000 federal legislative grant through HUD.

Project Location

District 1 Upper Manatee River Road - Mill Creek Bridge, Bradenton

Description and Scope

Design and construct a new bridge to replace the existing bridge on UMRR at Mill Creek. The current 2 lane bridge will maintain 2 lanes while improving shoulder widths, allow for bicycle traffic and include sidewalks for pedestrian traffic to improve safety. The project will also include modifying/relocating the 42" water main along the south side of the existing bridge. The estimated dimensions of the new bridge are approximately 150 ft. long x 52 ft. - 2 in. Permitting and right-of-way costs will be included as part of the project costs.

Rationale

This area of the County near Upper Manatee River Road (UMRR) continues to experience steady growth and is expected to continue this trend in the future, particularly with the opening of the Ft. Hamer bridge. As part of infrastructure management to improve traffic and pedestrian safety for the roadway, the bridge on UMRR at Mill Creek (Bridge #134023)is to be replaced to accommodate increased vehicular and pedestrian traffic while bringing the structure up to current standards. The bridge currently has a very low Sufficiency Rating of 20.8 (out of 100) and a Health Index Rating of 80.14 (out of 100). In addition, the capacity rating of the bridge is low with the Inventory Rating at 7.9 tons where the rating standard is typically at 36 tons. As such, the bridge requires weight limit posting at 61% of normal legal load.

Project Title: 51st St. W Extension - 53rd Ave W to El Conquistador Parkway
Department: Public Works
Project Mgr: Steve Clark
Infra. Sales Tax: -
Project #: PJ6042761 **Status:** Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: - Project Need: Growth

Project Location

District 4 51st St W at 53rd Ave W, Bradenton

Description and Scope

(1) Design and permit (i) a four-lane divided thoroughfare road from 53rd Ave W to El Conquistador; and (ii) intersection improvements at 53rd Ave W and El Conquistador Pkwy to supplement the new roadway. Design to include multiuse trail on one side and a five-foot sidewalk on the other side, stormwater ponds, stormwater infrastructure, lighting, etc. (2) Evaluate and determine whether to construct the outside two lanes of the future four-lane roadway or construct all four lanes; (3) Construct the selected roadway improvements and intersection improvements at 53rd Ave W and El Conquistador Pkwy. Land acquisition will be required.

Rationale

51st St. W is an existing urban collector thoroughfare from State Road 64 to 53rd Ave W and is planned to be extended from 53rd Ave W to El Conquistador Pkwy per the County's 2045 Future Traffic Circulation Maps. This extension is within the County's Southwest County Improvement District and will tie together key corridors to enhance economic development and revitalization goals for the Southwest Districts of Manatee County. This will help provide multimodal connectivity to employment centers, educational facilities, tourism destinations, sports venues, and beaches. This County has received state legislative funding in the amount of $2.5 million and federal legislative funding in the amount of $3.5 million for this project.

Project Location

District 2 44th Ave E-19th St Ct E-30th St E, Bradenton

Description and Scope

Construction of a four-lane divided roadway with bike lanes, sidewalks, and streetlights to provide a future east-to-west thoroughfare.

Rationale

Level of service failures of SR 70 and SR 64 require construction of a new east/west roadway.

Project Location

District 2 44th Ave E - 15th St E - 19th St Ct E, Bradenton

Description and Scope

Construction of a four lane divided roadway with bike lanes, sidewalks and street lights.

Rationale

To provide a future east/west thoroughfare to support anticipated increase in capacity and to relieve demands on SR 70 and SR 64. This project opens up access from 15th Street East into the Manasota Industrial Park to 19th Street Court East, and creates a crossing over the CSX railroad.

Project #: PJ6045662 **Status:** Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes Project Need: Growth

Project Location

District 5 44th Ave E-44th Ave Plaza E - Lakewood Ranch Blvd, Bradenton

Description and Scope

Includes construction of approximately three miles of roadway improvements from 44th Avenue Plaza East to Lakewood Ranch Boulevard. Includes a four-lane divided roadway with sidewalks, bike lanes/multi-use path, and street lighting, an overpass over I-75, and a bridge crossing over a reclaimed water storage lake, and a bridge over a gas main. This section will include four, 12-foot lanes, a 22-foot median, curb and gutter, four-foot bike lanes, and five-foot sidewalks in each direction.

Rationale

Provide an east/west thoroughfare to support anticipated increase in capacity and help maintain the county's adopted levels of service for surrounding roadways including SR 70 and SR 64. This thoroughfare should help alleviate demand at the I-75/SR 64 and I-75/SR 70 interchanges. This project is part of the county's Comprehensive Plan.

Project #: PJ6045663 **Status:** Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes Project Need: Growth

Project Location

District 2 44th Ave E at 24th St E, Brandenton

Description and Scope

Construct westbound left and eastbound right turn lane improvements on 44th Ave E at 24th St E in accordance with the approved plans (PLN2212-0049). Process payment applications as outlined in the associated developer's agreement.

Rationale

Due to increase industrial development along this segment of 44th Ave E and the extension of 24th St E to 44th Ave E, increased traffic volume is expected. The County requested the developer of Manatee Industrial to install turn lanes at the 44th Ave E/24th St E intersection with their site development. The project will increase capacity and improve traffic circulation at the intersection.

Project Need: Other

Project Location

District 2 US 41 at Haben Blvd, Palmetto

Description and Scope

Construct right turn lane improvements along US 41 at the northern access road of the BACC with associated drainage, pavement striping, and pedestrian improvements.

Rationale

The Bradenton Area Convention Center (BACC) includes four access points along Haben Blvd. A east-west road, located on the northern portion of the property, allows for right-out only onto US 41. With the completion of a new hotel, Palmetto Marriott, just north of the BACC traffic demand is expected to increase. A design for a designated right turn lane at the BACC's access road has been completed.

Project Title: Fort Hamer Road - Project Development & Corridor Study (UMRR to Rive Isle Run)
Department: Public Works
Project Mgr: Tony Russo
Infra. Sales Tax: -
Project #: PJ6054767 **Status:** Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes Project Need: Growth

Project Location

District 1 Fort Hamer Road (UMRR to Rive Isle Run), Parrish

Description and Scope

A Project Development & Corridor Study to expand Ft Hamer Rd from two-lanes to four-lanes. The limits are from Upper Manatee River Rd to Rive Isle Run. This will include, (1) evaluating left, center, right, and meandering widening options for alignment, (2) evaluating impacts to adjacent properties, (3) incorporating previous, complete studies for expansion of the Ft Hamer Bridge, (4) determining if the standard typical section or a modified typical section should be used taking into account multi-modal options, stormwater, lighting, and utility needs, (5) construction control line survey/right-of-way map, and (6) additional studies needed to apply for federal grant funding.

Rationale

Widening of the road to support increased traffic and improve the level of service. This includes construction of about 3.87 miles of roadway improvements from Upper Manatee River Rd to US 301 and two more lanes. This is part of the County's Future Traffic Circulation Map and is operating below the adopted level of service. The study will determine the roadway alignment and typical section. Two studies will be completed for the corridor: (1) UMRR to Rive Isle Run and (2) Rive Isle Run to US 301. The project will include additional studies needed to apply for federal grant funding.

Project Location

District 1 Fort Hamer Road (Rive Isle Run to US 301), Parrish

Description and Scope

A Project Development & Corridor Study to expand Ft Hamer Rd from two-lanes to four-lanes. The limits are from Rive Isle Run to US 301. This will include, (1) evaluating left, center, right, and meandering widening options for alignment, (2) evaluating impacts to adjacent properties, (3) determining if the standard typical section or a modified typical section should be used taking into account multi-modal options, stormwater, lighting, and utility needs, (4) construction control line survey/right-of-way map, and (5) additional studies needed to apply for federal grant funding.

Rationale

Widening a section of Ft Hamer Rd to support increased traffic and to improve the level of service. This will consist of construction of about 3.87 miles of roadway improvements from Upper Manatee River Road to US 301 and two more lanes. This is part of the County's Future Traffic Circulation Map and is operating below the adopted level of service. The study will determine the roadway alignment and typical section. Two studies will be completed for the corridor: (1) UMRR to Rive Isle Run and (2) Rive Isle Run to US 301. The project will include additional studies needed to apply for federal grant funding.

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes Project Need: Growth

Project Location

District 1 Moccasin Wallow Rd - US 301 to W of 115th Ave East, Palmetto

Description and Scope

This project is Segment 1 of a 3 Segment plan, which will widen Moccasin Wallow Road from the east end of the I-75 off ramp area (approximately 75th Street E) east to US 301 and is intended to receive 50% funding from the State of Florida. The roadway enhancement for Segment 1 consists of approximately 5,506 LF from US 301 to 115th Avenue East (Copperstone entrance) on Moccasin Wallow Road to support the County's Long-Range Transportation Plan. This project is intended to collaborate efforts with a partnership of State grant funding of $7,200,000 for a total project of $14,400,000. The project, because of cost, is being developed with three segments along the eastern portion of this 4+ mile roadway.

Rationale

Moccasin Wallow is in the very active North County area centered in the northwest of Parrish, wherein thousands of approved single-family homes are under construction. An important east-west connection and evacuation route, this roadway creates an economic opportunity by connecting to the Port of Manatee that will be an important link for Manatee County's economic development. This project leverages a 50% participation by the State of Florida to control the cost to the County. Advancing this project with the outside funds would lay the groundwork for a 4-lane roadway that will act as the backbone for traffic in North County from US41 to US301, similar to University Parkway. This project is not a viable project without the 50% funding participation from the State.

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes
Project Need: Growth

Project Location

District 1 Moccasin Wallow Road - I-75 to W of 115th Ave E to W of Sawgrass Rd, Palmetto

Description and Scope

Reconstruct and widen Moccasin Wallow Road to a four-lane divided roadway within a six-lane road right-of-way 115th Ave E to Sawgrass Rd. This will include, 4 travel lanes, bike lanes, sidewalks and street lighting as well as a new signalized intersection at Sawgrass Rd. This project is identified as a concurrency-related improvement, either to mitigate background traffic or project-related traffic impacts, for several developments in the Moccasin Wallow corridor.

Rationale

This project is consistent with the long range need to provide a six lane Moccasin Wallow Rd connection between I-75 and US 301 per the County's adopted Traffic Circulation Plan. Traffic from existing and approved-but-not-yet-built development are expected to exceed the capacity of Moccasin Wallow Rd, and the rural to suburban transition create the need for a multimodal facility. Both of these needs can be addressed by constructing the proposed multi-lane roadway consistent with current County standards.

Infra. Sales Tax: -
Project #: PJ6071264
Status: Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: -
Project Need: Growth

Project Location

District 1 Moccasin Wallow Road at US 301 N, Parrish

Description and Scope

Complete a preliminary engineering and alignment analysis for the extension of Moccasin Wallow Road as a four-lane section within an ultimate six-lane section from US 301 N to SR 62. The project includes a survey of the recommended alignment.

Rationale

Moccasin Wallow Road is a future arterial throughfare per the County's Future Traffic Circulation Maps (Map 5 Series) from US 41 to SR 62. To support anticipated growth and help alleviate congestion of US 301, there is a need to extend this throughfare to SR 62. The Map 5 Series currently shows this segment as a future four-lane roadway, however it is expected that a map amendment will be initiated to changes to six lanes. The first step is to complete preliminary engineering and alignment analysis for the proposed road corridor.

Project Location

District 1 60th Ave E - US 301 to Factory Shop Blvd, Ellenton

Description and Scope

Design and construct additional lanes as required from US 301 to 29th St E with a new signalized intersection at Factory Shops Blvd. Construct additional/missing sidewalks and/or a multi-use path as required from 29th St E to Mendoza Road. This project also includes the design of 2 lanes with bike lanes and sidewalks from Mendoza Road north to the existing terminus coming south from 69th Street East and signalize the intersections of 60th Ave E at Mendoza Road and 69th St E. (Construction of this section will be under separate project numbers.)

Rationale

This project is expected to improve the capacity and operational efficiency of the existing 60th Avenue East at US 301 signalized intersection and 60th Avenue from US 301 to Mendoza Road.

Project Title: 60th Ave E (Buffalo Road) - Mendoza Road to Buffalo Road Terminus - Segment 2
Department: Public Works
Project Mgr: Steve Clark
Infra. Sales Tax: Yes
Project #: PJ6083163 **Status:** Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes Project Need: Growth

Project Location

District 1 60th Ave E (Buffalo Rd) - Mendoza Road to Existing Buffalo Rd, Ellenton

Description and Scope

Includes the extension of 60th Ave E (northward) and intersection improvements at Mendoza Rd/60th Ave E. Of the intersection improvements, signalization with lighting and ITS improvements is to be included. Construct the outside two lanes of the future four-lane roadway with bike lanes and sidewalk from Mendoza Rd north to the existing terminus of Buffalo Rd south of 69th St E along with associated stormwater pond siting and improvements. Construct intersection and signal improvements at 60th Ave E (Buffalo Rd) and Mendoza Rd that include: East leg-WB left and right turn lanes; West leg-EB left and right turn lanes, and intersection signalization with lighting and ITS improvements. Project will require land acquisition. Note: engineering costs are not included as the design will be completed under the current project #6083160.

Rationale

Connects Mendoza Rd to 69th St E and signalize the Mendoza Rd intersection which will improve the capacity and operational efficiency of the Mendoza Rd intersection and road network. Improvements are needed for the road network to function at the desired level of service. Improvements for this project are currently under project #6083160 60th Ave E - US301/Outlet Mall Entrance as part of improvements from US301 to 69th St E. This segment of the existing project will have different construction schedule thus is being separated as a standalone project. Improvements are currently referred to as Segment 2 of the 60th Ave E - US301/Outlet Mall Entrance project.

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes Project Need: Growth

Project Location

Multi-district 44th Ave E - 45th St- 44th Ave Plaza E, Bradenton

Description and Scope

Includes construction of 1.3 miles of roadway improvements from 45th Street East to 44th Avenue Plaza East; to include a four-lane divided roadway with sidewalks, bike lanes, and street lighting, and a bridge crossing the Braden River. This section will include four 11-foot lanes, a 22-foot median, curb and gutter, 6-foot bike lanes, 10-foot sidewalk on northside and 5-foot sidewalks on southside. Morgan Johnson Road and Caruso Road will be realigned to connect at a single intersection on 44th Avenue East.

Rationale

To provide an east/west thoroughfare to support anticipated increase in capacity and help maintain the county's adopted levels of service for surrounding roadways including SR 70 and SR 64. This thoroughfare should help alleviate demand at the I-75/SR 64 and I-75/SR 70 interchanges. This project is part of the county's Comprehensive Plan.

Project Title: Golf Course Rd over Gamble Creek Bridge Replacement
Department: Public Works
Project Mgr: Albert Rosenstein
Infra. Sales Tax: -
Project #: PJ6090960 **Status:** Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: - Project Need: Deficiency

Project Location

District 1 Golf Course Rd over Gamble Creek Bridge, Parrish

Description and Scope

Design and construct a new bridge to replace the existing bridge on Golf Course Rd over Gamble Creek. The current 2 lane bridge will maintain 2 lanes while improving shoulder widths and providing sidewalks allowing for bicycle and pedestrian traffic to improve safety. The alignment may also shift slightly and the roadway profile will be raised to provide the necessary clearance over the creek for storm elevation. The estimated dimensions of the new bridge are approximately 200 ft. long x 50 ft. - 8 in. wide. Permitting and right-of-way costs will be included as part of the project costs.

Rationale

This structure on Golf Course Rd is on a main collector route that carries traffic between Ft. Hamer Rd to Rye Rd. Designing and replacing this structure allows all design and engineering cost savings to be applied while still realizing the cost savings from reduced maintenance during the early part of anticipated 75 year life of the new structure. The bridge (FDOT# 134021) was constructed in 1965, has a fair sufficiency rating of 71.5 (out of 100), and has past settlement issues. The bridge is also located along a route that is having growth from various developments.

Project #: PJ6092560 **Status:** Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: - Project Need: Growth

Project Location

District 1 Moccasin Wallow Road-US 41-Gateway Blvd, Palmetto

Description and Scope

Design and land acquisition for an ultimate build out of a six-lane road. Construct four lanes from US41 to Gillette drive(west of I75), with bike lanes, sidewalks, and street lighting. To realize a cost savings the following two Moccasin Wallow road projects 6093960 (IST TRRI022 - $6,371,000), and 6094460 (IST TRRI021 - $7,390,000) have been closed and combined with 6092560. Contract a right turn lane for the Southpoint (M/I Homes) Development per the PILORI agreement.

Rationale

Expand service by improving existing traffic capacity between I-75 and Port Manatee.

Project Title: Canal Rd - US 301 to 17th St E - Segment 1
Department: Public Works
Project Mgr: Wen DeSue
Infra. Sales Tax: Yes
Project #: PJ6094360 **Status:** Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes Project Need: Growth, Deficiency

Project Location

District 2 US 301 to 17th St E, Palmetto

Description and Scope

Design and construct four (4) travel lanes between US 301 to north of 17th Street East. Include the realignment of Mendoza Road connecting 37th Street East to 39th Street East at Canal Road.

Rationale

To meet current design standards for thoroughfare roadways. Traffic analysis indicates an increase in traffic volume on Canal Road between US 301 and 17th Street East. Therefore, increasing the scope of work to design and construct four (4) lanes instead of two (2) will increase safety to the motoring public. Further, the realignment of Mendoza Road connecting the eastern segment, 37th Street E, to the western segment, 39th Street E, at one intersection on Canal Road will decrease conflicts at the intersection allowing for a safer traffic movement.

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: - Project Need: Deficiency

Project Location

Multi-district Canal Rd - 37th St E to 49th St E, Palmetto

Description and Scope

Design and construction of a functional improvement of a segment of Canal Rd generally between 37th ST E and 49th ST E and a realignment of 37th ST E (on the east) north to 39th ST E to form a single intersection.

Rationale

The functional improvement of this segment of Canal Rd from 37th ST E to 49th ST E and the realignment of Mendoza Rd (37th ST E) north to meet 39th ST E at a single intersection with a traffic signal or roundabout. The functional improvements will include minimum 11' travel lanes, shoulders, street lighting and sidewalks and/or a multi-use path on one side in lieu of bike lanes. This segment is part of an overall Canal Rd improvement and the exact boundaries may have small sections of overlap depending on the order of construction to allow for proper transitions from old to new.

Project #: PJ6096960 **Status:** Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: - Project Need: Deficiency

Project Location

District 2 9th St E - N of US 301, Bradenton

Description and Scope

This project is to work with CSX to replace the traffic wearing surface of the this five lane wide two track crossing just north of US 301.

Rationale

This rail crossing surface has reached the end of its useful life and is degrading rapidly. This crossing is adjacent to the Tropicana processing plant and takes tremendous truck traffic from loaded orange delivery trucks. This route also serves as an easy connection between US 301 and SR 64 for those avoiding the traffic congestion on 1st St. This project is needed soon as experience has shown when rubberized panel crossings such as these show failure they degrade at an alarming rate. This has been shown on the Tallevast Rd crossing repair just last year. It continues to be shown on SR 70 at the Seminole Gulf tracks.

Capital Improvement Plan
FY2026 - FY2030

Category: Transportation
Subcategory: Road Improvements
Project Title: Mulholland Road Extension
Department: Public Works
Project Mgr: Jeff Streitmatter
Infra. Sales Tax: Yes
Project #: PJ6102161
Status: Requested

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: No
Project Need: Growth

Project Location

District 1 Mulholland Road at Rye Road, Parrish, 34219

Description and Scope

Evaluate, design, permit, and construct a two-lane, undivided collector thoroughfare roadway from the existing eastern terminus of Mulholland Rd to Rye Rd. The roadway is to include at least closed drainage, sidewalk and trail, and lighting. Additionally, design, permit, and install a span wire traffic signal and associated turn lanes at the Mulholland Rd/Rye Rd intersection. Acquire land as necessary for the project.

Rationale

Mulholland Rd is a two-lane collector throughfare per the County's 2045 Future Traffic Circulation Plan (Map 5 Series). This road currently dead ends approximately one-half mile west of Rye Rd. Due to continued growth and traffic demand in the area, there is a need to extend Mulholland Rd to Rye Rd. With the extension, staff recommend installation of a span wire traffic signal at this intersection pending ultimate buildout when North Rye Rd is widened. Extending Mulholland Rd along with the traffic signal is expected to improve the traffic circulation and safety for all users.

Project Mgr: Steve Clark
Infra. Sales Tax: Yes
Project #: PJ6102460
Status: Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: -
Project Need: Deficiency

Project Location

District 3 9th Ave NW - 71st St NW - 99th St NW, Bradenton

Description and Scope

This project is to reconstruct the west end of 9th Ave NW from 75th St NW to 99th ST NW and install a multiuse trail on the north side of 9th Ave NW from 99nd ST NW to 75th ST W. The project reconstruction area will include bike lanes, curb, stormwater piping, stormwater ponds and likely wetland mitigation areas and/or flood plain conservation areas. In addition, a five-foot sidewalk will be constructed on the south side of the 9th Ave NW from 75th St NW to 71st St NW, along with drainage improvements to accommodate the installation of the sidewalk.

Rationale

Due to the success of Robinson Preserve and the recent opening of a second access point from 9th Ave NW, the deficiencies of 9th Ave NW from 71st ST NW to 99th ST NW have become glaring. The road in this area is 17-18 feet wide, with no sidewalks and very close ditches on both sides. There is also minimal shoulder between the edge of the road and the ditch. This makes not only access to Robinson Preserve undesirable because the increased traffic has a difficult time passing two cars at a time in this section. Also bike riders and walkers in this area have no extra space or dedicated area to safely use. Sidewalk has been requested by the School Board along 9th Ave NW from 71st St NW to 75th St NW to provide a safe route to school and in response to multiple requests for sidewalks from the general public.

Project Title: Lakewood Ranch Blvd - SR 70 to University Parkway - Pavement Reconstruction
Department: Public Works
Project Mgr: Phil Catalano
Infra. Sales Tax: -
Project #: PJ6102961 **Status:** Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: - Project Need: Deficiency

Project Location

District 5 Lakewood Ranch Blvd at University Parkway, Bradenton

Description and Scope

Design, permit, and construct full base reconstruction and resurfacing of Lakewood Ranch Blvd from University Pkwy to SR 70 (approximately 2.9 miles). Including sidewalk repairs as various location along the roadway, material testing, pedestrian striping enhancements, and install MVDS at all traffic signals.

Rationale

The asphalt condition in this section is poor; recent roadway coring data showed that the base, suffering water intrusion (through the cracked asphalt), is not meeting the Limerock Bearing Value as required per specifications. Staff recommends the pavement be reconstructed (base and asphalt). Additionally, sidewalk repairs (at various locations), pedestrian striping enhancements, and traffic signal upgrades, such as Microwave Vehicle Detection Systems (MVDS) will be included as part of the project.

Project #: PJ6104760
Status: Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: -
Project Need: Deficiency

Project Location

District 1 Duette Rd Bridge over Manatee River, Parrish

Description and Scope

This project begins the process to replace the Duette Rd bridge over the Manatee River. This structure is 60+/- years old. While it is still a very rural road with low traffic volumes, the importance of this road is critical to the economy of the area where the detour is 25 miles or more.

Rationale

The design process must take place first to determine construction as the alignment and construction method will greatly affect the cost. Past discussions and mining permits with Mosaic, there is a potential for a cost share. The design process will include the process to select the alignment and construction method. It must first be determined whether or not to attempt to smooth curve of the road. The process then determines if the road will be closed during construction or if some form of temporary staged construction or route will be used. The results of this project will provide biddable plans and a very accurate construction cost estimate.

Project #: PJ6104860 **Status:** Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes Project Need: Growth

Project Location

District 2 51st Ave E - US 301 to 17th St E, Ellenton

Description and Scope

Design and widen 51st Avenue East as a four-lane roadway with closed drainage between US 301 and 17th Street East, including improvements to the existing signalized intersection of 51st Ave E at US 301. The improvement will help achieve and maintain adopted LOS for traffic from existing development and the Ellenton Commerce Park.

Rationale

51st Ave E is an existing component of the planned 49th Ave E collector road spine west of I-75 in north County. Existing operational characteristics and increasing traffic prompt a need to widen 51st Ave E and improve the southbound approach to the 51st Ave E at US 301 signalized intersection.

Project #: PJ6104960
Status: Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes
Project Need: Growth

Project Location

District 1 Buckeye Road, Palmetto

Description and Scope

Conduct preliminary engineering and feasibility analysis related to construction of Buckeye Road as a four lane roadway within constrained right-of-way.

Rationale

This project was identified as a mid- to long range need in the Northwest County Plan to support Tier II development in the Port Manatee area. The project is consistent with the long range need to widen Buckeye Road to four lanes per the County's adopted Traffic Circulation Plan.

Project Location

District 1 2950 - 3010 Moccasin Wallow Road, Palmetto

Description and Scope

The new EMS Facility requires improvements for emergency vehicle access within the Moccasin Wallow Road right-of-Way including Median Opening for the proposed EMS facility, Emergency Preemption Traffic Signal, east bound left turn auxiliary lane, and west bound right turn auxiliary lane and associated lighting, drainage, and utilities modifications.

Rationale

The new EMS Facility requires improvements for emergency access within the Moccasin Wallow Road right-of-Way.

Project Title: Lena Road - SR 70 to SR 64
Department: Public Works
Project Mgr: Tony Russo
Infra. Sales Tax: Yes
Project #: PJ6107561
Status: Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes
Project Need: Growth

Project Location

District 5 Lena Road at SR 70, Bradenton

Description and Scope

Design, permit, and construct Lena Road as a two-lane urban roadway from its existing terminus (north of SR 70) to SR 64 with associated stormwater and pedestrian improvements. Includes: roundabouts at 44th Ave E and Brower/Musgrave Ranch Road; modification to SR 64 and 54th Drive East (between Lena Road and 87th Street East) as required for the project and land acquisition.

Rationale

This project includes constructing the missing component of the incomplete urban collector throughfare east of I-75, improving the existing undivided roadway to a two-lane divided urban corridor, and improving SR 64 and 54th Drive East, as necessary for the project. This is consistent with the long range need to provide a two-lane collector thoroughfare between SR 64 and SR 70 per the County's adopted 2045 Future Traffic Circulation Plan Maps. With the County's programmed project to extend 44th Ave E through this area, completing the Lena Rd connection will improve mobility, accessibility, and provide a parallel alternative to I-75.

Project Location

District 5 Lorraine Rd - SR 64 to 59th Ave E, Bradenton

Description and Scope

This project is part of the county's Comprehensive Plan Future Traffic Circulation Map and includes construction of approximately 2.76 miles of roadway improvements from SR 64 to 59th Avenue East. The proposed widening will include one bridge, four lanes, a median, curb and gutter, bike lanes, sidewalks in each direction, and street lighting.

Rationale

Manatee County intends to widen this section of Lorraine Road to support an anticipated increase in traffic demand and help maintain the county's adopted levels of service for parallel facilities including Lakewood Ranch Boulevard, White Eagle Boulevard, and Uihlein Road.

Project Title: Upper Manatee River Road North of SR 64 to Fort Hamer Bridge
Department: Public Works
Project Mgr: Andres Hidalgo
Infra. Sales Tax: -
Project #: PJ6107760 **Status:** Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes Project Need: Growth

Project Location

District 5 Upper Manatee River Rd N of SR 64 to Ft Hamer Bridge, Bradenton

Description and Scope

Reconstruct and widen Upper Manatee River Road from north of SR 64 to Fort Hamer Bridge from 2 to 4 lanes. This project is identified as a concurrency-related improvement, either to mitigate background traffic or project-related traffic impacts, for several developments in the area.

Rationale

This project is consistent with the long range need to provide a four lane Upper Manatee River Road connection between SR 64 and the Fort Hamer Bridge per the County's adopted Traffic Circulation Plan. Traffic from existing and approved-but-not-yet-built development is expected to exceed the capacity of Upper Manatee River Road. This need can be addressed by constructing the proposed multi-lane roadway consistent with current County standards.

Project Location

District 4 63rd Ave E - US 301 to Tuttle , Bradenton

Description and Scope

This roadway widening project will create additional capacity for about 10,000 vehicles per day in a 1.12 mile corridor and help alleviate congestion on parallel sections of SR 70. Although this link is not currently failing, but it is projected to reach capacity in the near future.

Rationale

Manatee county intends to widen this section of 63rd Avenue East to support an anticipated increase in traffic demand and help maintain the county's adopted levels of service for parallel facilities including SR 70. This project is part of the county's Comprehensive Plan Future Traffic Circulation Map and includes construction of approximately 1.12 miles of roadway improvements from US 301 to 39th Street East (Tuttle Avenue). The proposed widening will include a four-lane divided roadway with sidewalks, bike lanes, and street lighting.

Infra. Sales Tax: Yes
Project #: PJ6108260
Status: Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes
Project Need: Growth

Project Location

District 3 75th St W - 20th Ave W to Manatee Ave W, Bradenton

Description and Scope

Widen the existing two lane roadway to a four lane roadway with a center left turn lane and/or median from 20th Ave to Manatee Ave (approximately 1 mile). Add and upgrade pedestrian and bicycle facilities, replace and upgrade traffic signals as needed to accommodate the widening, and add lighting. Project will require right-of-way acquisition. Due to right-of-way constraints the improvement will not meet the County's standard typical 4-lane section.

Rationale

The road is proposed to be widened from 2 lane to 4 lane to increase capacity. The section operates below the County's adopted level of service. The project will tie into the existing 4 lane section at 20th Ave and provide a 4 lane road all the way from Cortez Rd to Manatee Ave which will provide improved north south traffic circulation and prepare for future traffic growth.

Subcategory: Road Improvements
Project Title: 59th St W from Cortez to Manatee Ave
Department: Public Works
Project Mgr: Tony Russo
Infra. Sales Tax: Yes
Project #: PJ6108360
Status: Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes
Project Need: Growth

Project Location

District 3 59th St W from Cortez to Manatee Ave, Bradenton

Description and Scope

Widen the existing two lane roadway to a four lane roadway with a center left turn lane and/or median from Cortez Road to Manatee Ave (approximately 2.3 miles). The project will also include adding and upgrading pedestrian and bicycle facilities, replacing and upgrading traffic signals as needed to accommodate the widening, and adding lighting. Project will require right-of-way acquisition. Due to right-of-way constraints the improvement will not meet the County's standard typical 4-lane section. This project includes the limits of the former functional improvement project TR01455 (33rd Ave Dr W - Cortez Rd) and the former sidewalk project TR01552 (Sun Chase Apt - Cortez), both of which are no longer needed as their scope is included or made obsolete by the 6108360 project.

Rationale

The road is proposed to be widened from 2 lane to 4 lane to increase capacity. The southern section from 21st Ave to Cortez currently operates below the County's adopted level of service and while the northern sections currently operate above the County's adopted level of service, providing a 4 lane road all the way from Cortez Rd to Manatee Ave will provide improved north south traffic circulation and prepare for future traffic growth.

Project #: PJ6108662 **Status:** Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes Project Need: Growth

Project Location

District 1 Erie Rd - Martha Rd to US 301, Parrish

Description and Scope

The proposed widening will include four 12-foot lanes, a 22-foot median, curb and gutter, four-foot bike lanes, five-foot sidewalk on the south side, 10-foot multi-use trail on the north side, and street lighting. The intent is to complete this work just before the State College of Florida opens their Parrish Campus at the NW corner of Fort Hamer and Erie Road.

Rationale

Manatee county intends to widen this section of Erie Road along with a multi-use trail to support an anticipated increase in traffic demand, to facilitate traffic operation, vehicular turning movements at Parrish Community High School and to encourage non-motorized mobility options . This project includes construction of approximately 1 mile of roadway improvements from Martha Road to US 301.

Project Title: 28th Avenue East - US301 to 17th St E
Department: Public Works
Project Mgr: Jim Renneberg
Infra. Sales Tax: -
Project #: PJ6109260
Status: Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: -
Project Need: Deficiency

Project Location

District 2 28th Ave E - US301 to 17th St E, Palmetto

Description and Scope

The project plans to relocate the roadway to the east in ROW of the County. The new 24' road will have two different typical sections designated by two phases. Phase 1 from US 301 to the north approx. 800 feet only paving the existing shell roadway and Phase 2 the remaining 1,800 feet north to 17th St E which includes paving, drainage improvements, curb and gutter, and sidewalk. Work will include significant stormwater work to replace road crossings and/or relocate or pipe ditches. This new paved roadway will provide additional access between US 301 and 17th ST E between Canal Rd and Ellenton Gillette Rd.

Rationale

Manatee County intends to relocate and improve a short section of 28th Ave E from US 301 to 17th ST E in the Ellenton/Palmetto area. The existing shell road for half the length of the project lies within the ROW of the FPL railroad. It has been a goal to shift the road to the east for many years. Now, through efforts with new development in the area, the ROW to make this shift to the east has come to fruition. The last piece of the puzzle was the planned location of Manatee County Mosquito Control District facility to this roadway.

Project #: PJ6109360 **Status:** Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: - Project Need: Deficiency

Project Location

District 5 Kay Rd over Cypress Strand Bridge, Bradenton

Description and Scope

Design and construct a new bridge to replace the existing bridge on Kay Rd over Cypress Strand. The current 2 lane bridge will maintain 2 lanes while improving shoulder widths and allow for bicycle and pedestrian traffic to improve safety. Also, will include modifying the roadway profile to decrease overtopping conditions. The estimated dimensions of the new bridge are approximately 45 ft. long x 50 ft. - 8 in. and the design will provide allowances for future widening to accommodate 4 lanes. Permitting and right-of-way costs will be included as part of the project costs.

Rationale

Although the Kay Rd over Cypress Strand is a relatively new bridge, due to the rapid growth in the area, the bridge has become significantly substandard and functionally obsolete. Traffic has increased by about 5000% since about 2006 since Port Harbour pkwy was opened. The bridge has high traffic and pedestrian volume. The bridge was once a dead end location but now has through traffic and is forecast to become a collector route. Designing and replacing this structure allows all design and engineering cost savings to be applied while still realizing the cost savings from reduced maintenance with a significant improvement of safety during the early part of anticipated 75 year life of the new structure. The bridge was constructed in 1985, has a fair sufficiency rating of 77.3 (out of 100) but is classified as functionally obsolete. In addition, the bridge is currently classified as a scour critical bridge from the recent unknown foundation scour program.

Status: Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: -
Project Need: Deficiency

Project Location

District 1 Bobby Jones Ct over The Fairways Pond, Palmetto

Description and Scope

The scope includes the permitting, project management, and rehabilitation of the existing structure on Bobby Jones Ct over The Fairways Ponds. The anticipated rehabilitation will consist of slip lining the existing structure with HDPE. The roadway geometry and overall structure footprint with remain unchanged. No road closure is anticipated but sidewalk closure may be necessary. Temporary access for staging and material storage is anticipated at the southeast corner of the structure which involves temporary impacts to the golf course property.

Rationale

The Bobby Jones Ct Structure (Bridge NB3046) over The Fairways Ponds consists of three 8' diameter corrugated metal pipes with each being approximately 101' long with custom decorative concrete headwalls. An initial inspection was completed in February 2023 and found severe corrosion with areas of 100% section loss throughout all three barrels. An underwater inspection was completed in November 2023 that confirmed these deficiencies. Preliminary hydraulics indicated that only 1 of the 3 barrels were required for capacity. However, the preliminary cost analysis indicated that rehabbing all three barrels is still the most cost effective option. Based on the current structure conditions, the structure is expected to require rehabilitation within the next year. The goal of the project is to extend the service life of the structure through rehabilitation and improve public safety.

Status: Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes
Project Need: Growth

Project Location

District 1 Erie Rd - 69th St E to Martha Road, Parrish

Description and Scope

Perform a Preliminary Engineering Design to begin land acquisition of Erie Road from 69th St E to Martha Road including a full survey of the corridor, to include the extension of Harrison Ranch Blvd to the north and the Sawgrass Rd connection tie in, to accommodate for future needs of development connections. Project will require right-of-way acquisition and possible eminent domain, therefore, deliverables to include preparation material for legal documentation for eminent domain are to be provided. The Design is to be based on guidance provided in the Florida Department of Transportation (FDOT), as applicable for a non-State roadway. Also, design and construction of roadway improvements from 69th St E to Martha Road based on the preliminary design from the adopted alignment. The project will include widening from two lanes to four lanes, with median, curb and gutter, bike lanes, street lighting and sidewalk along south side of the project.

Rationale

Manatee County intends to widen this section of Erie Road to support anticipated increase in traffic demand, to facilitate traffic operation, vehicular turning movements at Parrish Community High School, to encourage non-motorized mobility options, and help maintain the county's adopted levels of service. This project is part of the county's Comprehensive Plan Future Traffic Circulation Map. The project will include widening from two lanes to four lanes, with median, curb and gutter, bike lanes, street lighting, and sidewalk along the south side of the project corridor limits.

Category: Transportation **Subcategory:** Road Improvements
Project Title: Summerwoods Roadway Participation Agreement
Department: Public Works
Project Mgr: Brent Stufflebeam
Infra. Sales Tax: -
Project #: PJ6114860 **Status:** Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes Project Need: Growth

Project Location

District 1 Moccasin Wallow Road at Sawgrass Road, Parrish

Description and Scope

Design, permit, and construct roadway improvements, with associated stormwater retention, and wetland mitigation that results from the construction of the roadway improvements. Also, design and permit the Army Corps of Engineers permits for the mitigation required for off-site wetland impacts related to Sawgrass Road extending north from Erie Road to the South boundary of the Project. All as described in the agreement.

Rationale

A Local Development Agreement (LDA) with the VK Summerwoods LLC ("Developer") requires certain improvements to be made to address concurrency related to the Summerwoods residential development project ("Project"). The improvements create additional capacity above what is required by the Project and therefore the Developer is eligible for impact fee credits. However, due to the current market conditions, the Developer is unable to utilize all the credits contemplated in the LDA. The LDA requires that the if any impact fee credits are not awarded to the Developer, then the County shall reimburse the cash equivalent not credited for improvements. A roadway participation and reimbursement agreement ("Agreement") is to be used to address the remaining amount of impact fee credits and reimbursement to be provided to the Developer. This Agreement requires the creation of a fully funded capital improvement project to serve as the reimbursement account for the improvements.

Project Title: Saltmeadows - Sand Marsh Ave - Thoroughfare Improvement
Department: Public Works
Project Mgr: Derek O'Sullivan
Infra. Sales Tax: -
Project #: PJ6114960 **Status:** Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes Project Need: Growth

Project Location

District 1 Sand Marsh Ave, Parrish

Description and Scope

Design, permit, install, and construct a two-lane boulevard thoroughfare roadway as part of the Saltmeadows development in accordance with the approved construction plans for development. Review, approve, and process the final pay application for completed work and reimburse the developer based on terms of the agreement.

Rationale

A preliminary site plan (PSP) for the Saltmeadows (fka Dakin Property/Crosswind Creek) was approved depicting a local two-lane road bisecting the development property. At the time of construction plan review, staff was in the process of revising the Future Traffic Circulation Maps (Map 5 Series) to include a parallel thoroughfare (NN Road) facility to the east of Spencer Parrish Road from Golf Course Road to State Road 62. The new thoroughfare section requires additional construction costs not attributable or required by the development project. This project is to fund the developer's agreement for the reimbursement of additional construction costs incurred by the developer for the construction of a thoroughfare roadway section instead of a local road.

Status: Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: Yes
Project Need: Growth

Project Location

District 1 Moccasin Wallow Road - I-75 - W of Sawgrass Rd to Buffalo Rd

Description and Scope

Reconstruct and widen Moccasin Wallow Road to a four-lane divided roadway within a six-lane road right-of-way from Sawgrass Road to Buffalo Road. The improvements will include four travel lanes, bike lanes, sidewalks, and street lighting, as well as a new signalized intersection at Carter Road. Including additional pedestrian, lighting, and signalization improvements between 49th Avenue E and Buffalo Road. Also, this project is identified as a concurrency-related improvement, either to mitigate background traffic or project-related traffic impacts, for several developments in the Moccasin Wallow corridor.

Rationale

This project supports the long-range need for a six-lane Moccasin Wallow Road connection between I-75 and US 301 per the County's adopted Traffic Circulation Plan. Capacity is expected to be exceeded due to existing and approved development, and the rural-to-suburban transition creates a need for a multimodal facility. The project also improves pedestrian connectivity and enhances vehicle operations at the I-75 ramps, as FDOT's ultimate interchange work is beyond its current 5-year program.

Project Title: Fort Hamer Road - Moccasin Wallow Road to Fort Hamer Bridge - 4 Lane
Department: Public Works
Project Mgr: Tony Russo
Infra. Sales Tax: -
Project #: PJ6118060 **Status:** Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes Project Need: Growth

Project Location

District 1 Fort Hamer Road - Moccasin Wallow Road to Fort Hamer Bridge

Description and Scope

Design and construct the widening of Fort Hamer Road from Moccasin Wallow Road to the Fort Hamer Bridge to create a divided four-lane thoroughfare (approximately 5.2 miles). The typical section will include a grass median, turn lanes (as needed), pedestrian & bicycle facilities, and lighting. Modification of four signalized intersections will be required to accommodate the roadway widening. Project will require right-of-way acquisition.

Rationale

Manatee County intends to widen Fort Hamer Road from two-lanes to four-lanes to support current traffic levels as well as an anticipated increase in traffic demand. The widening limits will be from Moccasin Wallow Road southward to the existing Fort Hamer Bridge, that is planned to be expanded to a four-lane bridge concurrently with this project. The road between Moccasin Wallow Road and 301 was built and designed to accommodate this planned expansion to 4-lanes. This roadway segment is part of the County's Comprehensive Plan Future Traffic Circulation Map. The State has approved 2.5 million dollars in design grant funding to support this project.

Project #: PJ6118061
Status: Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes
Project Need: Growth

Project Location

District 1 Fort Hamer Bridge, Parrish

Description and Scope

Design and construct a two-lane bridge facility parallel to the existing Fort Hamer Bridge. Design to include pedestrian & bicycle facilities and lighting. It is anticipated that a Project Development & Corridor Study will be completed prior to starting the design.

Rationale

Manatee County intends to construct a two-lane bridge parallel to the existing Fort Hamer Bridge to serve as the southbound lanes for the 4 lanes build out. The existing two-lane bridge currently operates below the County's adopted level of service. The bridge expansion will alleviate existing deficiency as well as provide sufficient capacity to accommodate anticipated traffic growth. The bridge expansion, together with planned and underway roadway widening projects north and south of the existing bridge, will ensure a continuous four lane road from University Parkway to US 301, creating a parallel reliever facility to I-75 and add capacity to a crucial bridge over Manatee River. The State has approved 3 million dollars in design grant funding to support this project.

Category: Transportation
Subcategory: Road Improvements
Project Title: North Rye Road 4-Lane Widening
Department: Public Works
Project Mgr: Jeff Streitmatter
Infra. Sales Tax: Yes
Project #: PJ6118362
Status: Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: No
Project Need: Growth

Project Location

District 1 Rye Road south of Rosedown Glen, Parrish

Description and Scope

Evaluate, design, permit, and construct: (i) four-lane widening of North Rye Road from south of Rosedown Glen to County Road 675, (ii) required stormwater, pedestrian, and roadway lighting improvements, (iii) evaluate intersection control at Golf Course Road, Mulholland Road, and Rivers Reach Boulevard/Legacy Preserve Drive intersections and if appropriate design, permit, and construct two-lane roundabout(s) or traffic signal(s). Land acquisition is anticipated.

Rationale

Rye Road is a future arterial thoroughfare per the County's 2045 Future Traffic Circulation Plan (Map 5 Series) from State Road 64 to State Road 62. Due to current and future growth in the surrounding area, there is a need to widen North Rye Road to four lanes from south of Rosedown Glen to County Road 675 to improve safety and traffic circulation. The limits of this project are covered by a Local Development Agreement (LOA) with Rye Ranch for the design, permit, and construction of a two-lane divided roadway that will be partially funded by $5 million in impact fee credits. It is anticipated that the agreement will be amended for the four-lane widening.

Project #: PJTP25031 **Status:** Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: - Project Need: Deficiency

Project Location

Multi-district 9th St W over Cedar Hammock Canal, Bradenton

Description and Scope

Design, permit, and rehabilitate the existing bridge on 9th St W over Cedar Hammock Canal, Bridge #134076, using spin-cast rehabilitation method.

Rationale

The 9th St W Bridge (#134076) over Cedar Hammock Canal, constructed in 1960, connects SR 684 (Cortez Rd W) to 301 Blvd W and is critical for commercial and residential traffic. The structure was deemed structurally deficient in 2020 and has a current sufficiency rating of 54.1. Based on the current bridge conditions, the bridge is expected to require rehabilitation within the next five years. The goal of the project is to restore the structural integrity of the structure and improve public safety. Rehabilitation methods such as full structural replacement, slip lining, and spin-casting were evaluated with spin-casting being selected due to lower costs and impacts to the roadway. It is expected traffic will remain open during construction. There are no anticipated impacts to adjacent properties.

Project Title: 49th Ave E - Mendoza Rd to 69th St E Ext Project Development & Corridor Study
Department: Public Works
Project Mgr: Jeff Streitmatter
Infra. Sales Tax: -
Project #: PJTP25034 **Status:** Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: - Project Need: -

Project Location

District 1 Mendoza Rd at 49th Ave E, Palmetto

Description and Scope

Complete a Project Development & Corridor Study to extend 49th Ave E as a two-lane divided throughfare from Mendoza Road to 69th St E. The study is to include, at minimum, (1) evaluating existing conditions to determine the preferred alignment, (2) evaluating impacts to adjacent properties, (3) determining if the County's standard typical section or a modified typical section should be used taking into account multi-modal options, stormwater, lighting, and utility needs for the corridor, (4) a construction control line survey/right-of-way map, and (5) a preliminary cost estimate for the roadway extension for design, land, and construction.

Rationale

The 51st Ave E/49th Ave E roadway corridor is planned as a future two-lane divided collector thoroughfare from US 301 to 69th St E per the adopted County Future Traffic Circulation Map. The future roadway will support the anticipated increase in traffic demand and improve traffic circulation. The remaining segment will connect the corridor from Mendoza Rd to 69th St E, approximately 2.0 miles. The first step of this project is to complete a Project Development & Corridor Study to determine, among other things, the preferred roadway alignment and typical section, right-of-way impacts, and preliminary costs for the project.

Department: Public Works
Project Mgr: Phil Catalano
Infra. Sales Tax: Yes
Project #: PJTP25038 **Status:** Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: - Project Need: Deficiency

Project Location

District 5 Port Harbour Pkwy at Kay Rd, Bradenton

Description and Scope

Design, permit, and construct full base reconstruction and resurfacing of Port Harbour Pkwy from Kay Rd to Golden Harbour Trl. Including material testing, sidewalk repairs at various locations along the roadway, and pedestrian striping enhancements.

Rationale

Port Harbour Pkwy connects Kay Rd to Upper Manatee River Rd and provides access to several residential neighborhoods in the area. The condition of the road from Kay to Golden Harbour Trl has deteriorated to an extent that milling & resurfacing the road is not adequate for rehabilitation. Staff recommends full reconstruction of the pavement (base and asphalt). Additionally, repairs to damaged sidewalks at various locations long the roadway and pedestrian striping enhancements are recommended.

Project Title: State Road 64 PD&E Study - Lorraine Road to Verna Bethany Road
Department: Public Works
Project Mgr: Jeff Streitmatter
Infra. Sales Tax: -
Project #: PJTP25043 **Status:** Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes Project Need: Growth

Project Location

Multi-district SR 64 (Lorraine Road to Verna Bethany Road)

Description and Scope

Complete a Project Development & Environmental Study to expand SR 64 from two-lanes to four-lanes between Lorraine Road and Verna Bethany Road (approximately 7.75 miles). As this is a state road the PD&E study must follow FDOT guidelines and requirements. The study should also evaluate intersections along the corridor including planned roundabouts by FDOT, widening the bridge crossing over the Manatee River at Lake Manatee, and future water and sewer utility extensions or upsizing needs along this corridor.

Rationale

Due to existing and anticipated traffic growth in this area of Manatee County, there is a need to increase capacity on SR 64 by widening it from two lanes to four lanes from the existing four-lane section near the Lorraine Road intersection eastward to Verna Bethany Road. The first step of this project is to complete a Project Development & Environmental (PD&E) study to determine, among other things, the preferred roadway alignment and typical section.

Project Title: Palma Sola Blvd - Bridge 134015 Replacement
Department: Public Works
Project Mgr: Gil Bullock
Infra. Sales Tax: Yes
Project #: PJTP26030 **Status:** Requested

Comprehensive Plan Information

CIE Project: No
LOS/Concurrency: No Project Need: Deficiency

Project Location

District 3 Palma Sola Blvd over Palma Sola Bay, Bradenton

Description and Scope

The scope includes the design, permitting, land acquisition, project management, and construction of a new bridge on Palma Sola Blvd over Palma Sola Bay. The anticipated bridge will be 65 ft. long x 43 ft. wide. It is anticipated that the new bridge will be built with a full road closure. The potential for sidewalks for the new bridge will be evaluated during design. The project involves minimal roadway geometry improvement to tie the new bridge into the existing roadway. The project will meet current County Standards while minimizing the project length and impacts to adjacent properties.

Rationale

The Palma Sola Blvd Bridge (No. 134015) over Palma Sola Bay, constructed in 1962, connects SR 684 (Cortez Rd W) to SR 64 (Manatee Ave W) and is critical for residential traffic. In recent years, significant rehabilitation such as pile jackets and fiber wrapping were completed to extend the service life of the bridge. The bridge is posted for weight restriction, scour critical and a sufficiency rating of 61.5. The bridge is expected to require replacement within the next five years. The goal of the project is to replace the deteriorated bridge with a bridge that meets current standards and improves public safety.

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: - Project Need: Deficiency

Project Location

District 4 26th St W over Cedar Hammock Canal, Bradenton

Description and Scope

The scope includes the design, permitting, land acquisition, project management, and construction of a new bridge on 26th St W over Cedar Hammock Canal. The new bridge will be approximately 28 ft. long x 67 ft. wide. It is anticipated that the new bridge will be built in phases in order to maintain traffic during construction. The project involves minimal roadway geometry improvement to the tie the new bridge into the existing roadway. The project will meet current County Standards while minimizing the project length and impacts to adjacent properties. Minimal land acquisition is anticipated.

Rationale

The 26th St W Bridge (#134033) over Cedar Hammock Canal, constructed in 1963, connects Cortez Rd W to 53rd Ave W and is critical for commercial and residential traffic. In past years, several repairs have been completed to the existing beams and substructure to extend the service life of the bridge. The bridge is posted for weight restriction, functionally obsolete and has a sufficiency rating of 19.7. The bridge is expected to require replacement within the next five years. The goal of the project is to replace the deteriorated bridge with a bridge that meets current standards and improves public safety.

Project Title: Singletary Rd over Branch of Myakka River - Bridge 134055 Replacement
Department: Public Works
Project Mgr: Gil Bullock
Infra. Sales Tax: Yes
Project #: PJTP26032 **Status:** Requested

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: - Project Need: Deficiency

Project Location

District 1 Singletary Rd over Branch of Myakka River, Myakka City

Description and Scope

The scope includes the design, permitting, land acquisition, project management, and construction of a new bridge on Singletary Rd over Branch of Myakka River. The new bridge will be approximately 60 ft. long x 43 ft. wide. It is anticipated that the new bridge will be built with a full road closure. Due to flood history, it is anticipated that the new bridge and approaches will need to be raised to provide adequate freeboard and roadway serviceability. The project will meet current County Standards while minimizing the project length and impacts to adjacent properties. Land acquisition is anticipated.

Rationale

The Singletary Rd Bridge (#134055) over Branch of Myakka River, constructed around 1970, connects Betts Rd to SR 70 and is critical for agricultural, residential and future development traffic. Routine maintenance and minor bridge repairs has been completed to extend the service life of the bridge. The bridge is in fair condition, posted for weight restriction and has a sufficiency rating of 60.8. The bridge is expected to require replacement within the next five to ten years. The goal of the project is to replace the deteriorated bridge with a bridge that meets current standards and improves public safety.

Project Location

District 2 26th Ave E over Sugarhouse Creek, Bradenton

Description and Scope

The scope includes the design, permitting, land acquisition, project management, and construction of a new bridge on 26th Ave E over Sugarhouse Creek. The new bridge will be approximately 20 ft. long x 49 ft. wide to accommodate sidewalks. It is anticipated that the new bridge will be built with a full road closure. Due to flood history, it is anticipated that the new bridge and approaches will be raised to provide adequate freeboard and roadway serviceability. The project will meet current County Standards while minimizing the project length and impacts to adjacent properties. No anticipated land acquisition.

Rationale

The 26th Ave E structure (#NB1006) over Sugarhouse Creek, constructed around 1955, connects 27th St E to 39th St E and is critical for residential and future development traffic. Routine maintenance and minor bridge repairs has been completed to extend the service life of the bridge. The bridge is functionally obsolete, posted for weight restriction and has a sufficiency rating of 48.0. The bridge is expected to require replacement within the next five to ten years. The goal of the project is to replace the deteriorated bridge with a bridge that meets current standards and improves public safety.

Project Location

Countywide Countywide

Description and Scope

Perform PD&E, design, permitting, land acquisition, and construction of segments of the East-West Gateway Greenway Trail from SR 789/Gulf Drive to Parrish. The project will include trail construction, stormwater management, signing and marking, road crossing infrastructure, and trail amenities as appropriate. This will be a phased project, with available funding strategically allocated across the various segments and phases.

Rationale

This project is part of the long-planned multi-use recreational trail system, designed to enhance multi-modal connectivity, promote sustainable transportation, and provide recreational opportunities throughout the County. It aligns with the Florida Department of Transportation's SUN Trail Network, which aims to establish a seamless, non-motorized corridor connecting Sarasota County to Hillsborough County.

Design, permit, and construct a 15-foot multiuse trail, where possible within existing right-of-way, along the east side of Bourneside Boulevard from SR 70 to SR 64.

Rationale

The Gateway Greenway Trail (Greenway Trails) is a planned multi-purpose recreational trail system to extend from Hillsborough/Manatee County line south Sarasota County connecting parks, preserves, and other planned trails systems in the state. This project includes the Bourneside Boulevard North section of the Greenway Trail from State Road 70 to State Road 64. This project is being implemented via a developer's agreement with the Lakewood Ranch Stewardship District.

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: No Project Need: Growth

Project Location

Countywide Countywide

Description and Scope

Perform PD&E, design, permitting, land acquisition, and construction of segments of the North-South Gateway Greenway Trail from University Blvd to the Hillsborough County line. The project will include trail construction, stormwater management, signing and marking, road crossing infrastructure, and trail amenities as appropriate. This will be a phased project, with available funding strategically allocated across the various segments and phases.

Rationale

This is part of the long planned multi-use recreational trail system that will enhance multi-modal connectivity, promote sustainable transportation, and provide recreational opportunities across the County. This aligns with the Florida Department of Transportation's SUN Trail Network.

Project Title: 127th St W Over Palma Sola Bay Bridge (#134115) Replacement
Department: Public Works
Project Mgr: Gil Bullock
Infra. Sales Tax: Yes
Project #: PJTP26068 **Status:** Requested

Comprehensive Plan Information

CIE Project: No
LOS/Concurrency: No Project Need: Maintenance

Project Location

District 3 127th St W over Palma Sola Bay West

Description and Scope

Includes project management, design, permitting, and replacement of Bridge 134115 on 127th St W over Palma Sola Bay West. Work will involve demolishing the existing structure, constructing a new bridge within the same footprint, and maintaining the current roadway geometry. A full road closure will be required during construction, with traffic detoured, due to limited staging areas and site constraints.

Rationale

Bridge 134115, built in 2009 along 127th St W over Palma Sola Bay West, is vital for residential and marine access. An April 2023 inspection found severe corrosion of tiebacks and hardware, compromising the stability of the steel sheet piling. Because these elements are critical to structural integrity, replacement is required to ensure long-term safety, reliability, and continued access for the community.

Capital Improvement Plan
FY2026 - FY2030

Category: Transportation
Subcategory: Road Improvements
Project Title: Countywide Bridge Rehabilitation
Department: Public Works
Project Mgr: Gil Bullock
Infra. Sales Tax: Yes
Project #: PJTP26071
Status: Requested

Comprehensive Plan Information

CIE Project: No
LOS/Concurrency: No
Project Need: Maintenance

Project Location

Multi-district Countywide

Description and Scope

The Countywide Bridge Rehabilitation will allow for scheduled routine maintenance and minor rehabilitation projects. Routine maintenance include guardrail repair, clearing debris and vegetation and concrete patching. Minor rehabilitation projects includes scour countermeasures, slip lining, paint steel beams and major concrete repairs. When possible, the County bridge crew will perform the work. These activities will maintain and prolong the life of County structures while improving public safety. The cost of major rehabilitation or replacement can be postponed with proper maintenance and repairs.				

Rationale

For FY2010-25, the Countywide Bridge Rehabilitation Fund (Account Number: 0019903) has been $500,000 annually. The original funding assumed an inventory of approximately 80 bridges, 130 non-qualifying bridges and 20 pedestrian bridges. The current structure inventory consists of 138 bridges, 183 non-qualifying bridges and 48 pedestrian bridges. A Countywide Bridge Rehabilitation Fund of $1.5 million annually is needed for proper routine maintenance and perform minor rehabilitation projects, accordingly this is a request for the Countywide Bridge Rehabilitation Fund be $1.5 million annually beginning in FY 2026.

Project #: PJTR02069
Status: Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: Yes
Project Need: Maintenance, Deficiency

Project Location

Multi-district County-wide

Description and Scope

This project encompasses paving 53 miles of existing routinely maintained County shell roads with 2" structural asphalt over a 4-year period beginning in FY22. These projects have been identified and will be allocated into individual roadway projects annually as programmed.

Rationale

It was requested of Public Works staff to bring back a rural road paving schedule. During discussions, it was determined that public works would prepare a report related to our shell roads maintenance program and the conversion of some, or all, of the existing shell roads to paved roads.

Category: Transportation **Subcategory:** Road Improvements
Project Title: Wauchula Road - Maple Creek Bridge Replacement
Department: Public Works
Project Mgr: Gil Bullock
Infra. Sales Tax: -
Project #: PJTR02238 **Status:** Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: Yes Project Need: Deficiency

Project Location

District 1 Wauchula Road at Ballard Road, Myakka

Description and Scope

The scope includes the design, permitting, land acquisition, project management, and construction of a new bridge on Wauchula Rd over Maple Creek. The new bridge will be approximately 80 ft. long x 43 ft. wide. It is anticipated that the bridge will be built in phases to maintain traffic during construction. Due to flood history, it is anticipated that the new bridge and approaches will need to be raised to provide adequate freeboard and roadway serviceability. The project will meet current County Standards while minimizing the project length and impacts to adjacent properties. No anticipated land acquisition.

Rationale

The Wauchula Rd Bridge (#134054) over Maple Creek, constructed around 1955, connects SR 64 to SR 70 and is critical for residential, commercial and agricultural traffic. Detour route is approximately 25 miles. Routine maintenance and minor bridge repairs has been completed to extend the service life of the bridge. The bridge is in fair condition and has a sufficiency rating of 59.1. The bridge is expected to require replacement within the next five to ten years. The goal of the project is to replace the deteriorated bridge with a bridge that meets current standards and improves public safety.

FY2026 - FY2030

Category: Transportation **Subcategory:** Road Improvements
Project Title: Lorraine Rd Phase 1 - from S of SR 70 to Hidden River Trail
Department: Public Works
Project Mgr: Phil Catalano
Infra. Sales Tax: Yes
Project #: PJTR02243 **Status:** Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: - Project Need: Deficiency

Project Location

District 5 Lorraine Road, Bradenton

Description and Scope

Mill & resurface from SR 70 to Hidden River Trail. This is Phase 1 of 2 phases. Phase 2 would be requested in a subsequent year. (1.2 centerline miles).

Rationale

Lorraine Rd is a major N/S connector for Manatee County and extends south of the county line into Sarasota County. This section connects the commercial centers of Lakewood Ranch with multiple neighborhoods and major E/W connectors such as SR 70 and University Parkway. Resurfacing would act as a preventative maintenance treatment in preserving the existing base. Prior maintenance projects have resurfaced the road from University Parkway to a point approximately one mile north, and this project would finish the resurfacing effort up to SR 70. The project encompasses milling and resurfacing with 2" structural asphalt and 1" of friction course asphalt. As this road has a sidewalk, the project would make repairs in various locations to cracked and/or shatter slabs. Pedestrian striping enhancements would also be made. This estimate includes design, preconstruction services, materials testing, and construction utilizing CMAR.

Category: Transportation **Subcategory:** Sidewalks
Project Title: Morgan Johnson Road -13th Ave East - Amberly Drive
Department: Public Works
Project Mgr: Eric Shroyer
Infra. Sales Tax: Yes
Project #: PJ6049762 **Status:** Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: No Project Need: Deficiency

Project Location

District 5 Morgan Johnson Road at 13th Ave E, Bradenton

Description and Scope

Design, permit, and construct approximately 1,200 LF of 5' sidewalk and related drainage improvements along the east side of Morgan Johnson Road from 13th Ave E to Amberly Drive and in front of the commercial property north of Amberly Drive ((PID: 1121710109). Design to include closed drainage and will required land/easement acquisition from the commercial property.

Rationale

Morgan Johnson Road (57th St E) is a federal aid eligible thoroughfare from 44th Ave E to State Road 64 E. There are two gaps in sidewalk along the east side of the roadway between 13th Ave E and Amberly Drive and fronting a commercial property. The Florida Department of Transportation (FDOT) has programmed $71,100 in design funding in their FY26-30 Work Program (FPN: 453422-1). This Local Agency Program (LAP) project will infill the missing sidewalk and improve pedestrian safety and connectivity along the corridor.

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: - Project Need: -

Project Location

District 1 Mocassin Wallow Rd at Gillet Dr., Palmetto 34221

Description and Scope

Design, permit, install, and construct a shared use path along the north side of Moccasin Wallow Rd. from Gillet Dr. to connect to the existing sidewalk along Buffalo Rd. including pedestrian signals and striping improvements.

Rationale

The Moccasin Wallow Road corridor is rapidly growing and to plan for future demand staff desire to construct a shared use path from Buffalo Rd to Gillet Dr. to improve pedestrian safety and multimodal connectivity in the area. It is staff's intention to construct this improvement with a proposed seperate project for a reclaim water main extension from Gillet Dr. to Buffalo Rd.

Project Title: 19th St E - 2nd Ave E -US41
Department: Public Works
Project Mgr: Andres Hidalgo
Infra. Sales Tax: Yes
Project #: PJ6107262
Status: Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: -
Project Need: Deficiency

Project Location

District 2 19th St E - 2nd Ave E -US41, Palmetto

Description and Scope

Construct five foot sidewalk along with drainage improvement to accommodate sidewalk installation.

Rationale

This sidewalk has been requested by the School Board to create a safe route to school(s) and to support the needs identified by the general public.

Project Title: Buffalo Road Sidewalk - Imperial Cir to Bobby Jones Ct
Department: Public Works
Project Mgr: Dafne Seeland
Infra. Sales Tax: Yes
Project #: PJ6115760 **Status:** Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes Project Need: Growth

Project Location

District 1 Buffalo Road at Bobby Jones Ct, Palmetto

Description and Scope

Design, permit, and construct approximately 4,000 LF of 5' sidewalk along the east side of Buffalo Road from Imperial Cir to Bobby Jones Ct.

Rationale

There is a gap in the sidewalk along the east side of Buffalo Road between Imperial Cir and Bobby Jones Ct. This project will infill the missing sidewalk to improve pedestrian safety and connectivity along the road corridor.

Department: Public Works
Project Mgr: Jeff Streitmatter
Infra. Sales Tax: Yes
Project #: PJTP26070
Status: Requested

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: No
Project Need: Growth, Deficiency

Project Location

Countywide Countywide

Description and Scope

Identify, evaluate, design, permit, and construct sidewalk segments to close gaps in the existing network.

Rationale

Many areas of Manatee County lack continuous sidewalks, creating unsafe conditions and limiting access to schools, parks, transit, and community destinations. This project funds construction of sidewalk segments to close gaps, improving pedestrian safety, ADA accessibility, and network connectivity. Completing these missing links supports the County's mobility goals, encourages walking, and enhances quality of life for all residents.

Project Title: Advanced Traffic Management System (ATMS) Lorraine Road G2W84
Department: Public Works
Project Mgr: Zachary Tarifa
Infra. Sales Tax: -
Project #: PJ6086366 **Status:** Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes Project Need: Growth

Project Location

District 5 Lorraine Rd at University Pkwy, Lakewood Ranch

Description and Scope

Install and construct Advanced Traffic Management System (ATMS) improvements along Lorraine Rd from University Pkwy to 59th Ave E. Improvements at various locations include fiber optic cables, close circuit television cameras, microwave vehicle detection system sensors, Bluetooth travel time measuring devices, and advanced vehicle detection and tie into the existing County ATMS fiber infrastructure.

Rationale

This project will construct Advanced Traffic Management System (ATMS) improvements along Lorraine Road from University Parkway to 59th Avenue East under a construction LAP agreement (FPN: 440324-1-58-01). The design was completed under an FDOT Local Agency Program (LAP) agreement. ATMS upgrades will enhance signal coordination, reduce congestion, and improve safety through real-time monitoring and adaptive control, while supporting growth and regional mobility.

Project #: PJ6112303
Status: Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes
Project Need: Growth

Project Location

District 1 SW Quadrant of Premier Complex, Lakewood Ranch

Description and Scope

Premier fuel site project will construct a fuel site that will support Premier Generator, MCSO Substation and other amenities at Premier Campus. This project is for fuel tanks with the capacity of at least 10,000 gallons.

Rationale

Premier Sports Campus, located in Lakewood Ranch area, is a 140 acres of pristine fields used for hosting everything from tournaments, practices, outdoor festivals, movie nights and much more. With the growth in the area, the need arose for the Premier Campus Racquet and Aquatics Complex, Premier Library, MCSO Substation and other amenities. In order to make this a functional facility, the need arose for a Premier Generator project which was approved and is being designed. During design and planning, the need arose for a Fuel Site at Premier to support the generator in order to make Premier a functional facility during hurricanes or other natural disasters.

Department: Public Works
Project Mgr: -
Infra. Sales Tax: -
Project #: PJTP26028 **Status:** Requested

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: - Project Need: Growth

Project Location

District 5 44th Ave E & Uihlein Rd, Bradenton

Description and Scope

Evaluate, design, permit and construct ITS infrastructure on 44th Ave E from Lakewood Ranch Blvd to Uihlein Rd and on Uihlein Rd from 44th Ave E to Lakewood National Parkway. The ITS infrastructure consists of fiber optic-based interconnect communication system, communication hub(s) and MVDS devices. Existing traffic signals and proposed ITS devices will be connected to the fiber optic network.

Rationale

The County's traffic management center (TMC) relies on intelligent transportation system (ITS) infrastructure to adequately monitor, implement changes to traffic signals and devices. With the steady increase of traffic, it becomes paramount to implement real time changes in response to congestion or incidents. This expansion of ITS infrastructure will connect new traffic signals and other ITS devices in the eastern part of the County to the TMC, while providing communication redundancy and strengthening overall network resiliency, ultimately improving traffic system operations.

***These figures reflect FY26-30 and future, budget is not included in these calculations.**

In the FY26 Enterprise Capital Improvement Plan (CIP), projects amount to $317,410,653. Funding for FY26-30 Enterprise projects totals $2,016,562,161, comprising 68.67% of the total CIP.

Noteworthy highlights in the enterprise section of the CIP consist of the following:

Potable Water receives $105,710,100 in FY26, with the remaining $976,615,893 is allocated for projects throughout the plan. It constitutes 36.86% of total projects in the FY26-30 CIP.

Featured Potable Water Projects:

- **44th Ave E to 38th Ave E & 24th St E 36" PCCP Replacement:**
  - FY26-30 Planned Funding: $41,932,230
- **Buffalo Creek Reverse Osmosis Water Treatment Plant:**
  - Current Funding: $7,550,000
  - FY26-30 Planned Funding: $181,298,860
- **Lake Manatee Dam Spillway Replacement Project:**
  - FY26-30 Planned Funding: $136,106,000
- **Lake Manatee WTP D Basin Addition:**
  - FY26-30 Planned Funding: $198,061,000
- **Morgan Johnson Rd to 40th Ave E 36" PCCP Replacement:**
  - FY26-30 Planned Funding: $39,322,500
- **Water Treatment Plant Generators and Switchgear Upgrade:**
  - FY26-30 Planned Funding: $40,214,000
- **Water Treatment Plant to SR64 36" PCCP Replacement:**
  - FY26-30 Planned Funding: $52,601,000

Solid Waste receives $4,476,000 in FY26, with the remaining $15,181,000 is allocated for projects throughout the plan. It constitutes 0.67% of total FY26-30 CIP projects.

Featured Solid Waste Projects:

- **Landfill Roadway Improvements:**
  - Current Funding: $204,000
  - FY26-30 Planned Funding: $1,355,000
- **Lena Road Stage II Gas Expansion Phase IV:**
  - FY26-30 Planned Funding: $2,689,000
- **New Landfill Site Purchase:**
  - Future Planned Funding: $12,305,000
- **Solid Waste Administration Building Enhancement:**
  - FY26-30 Planned Funding: $3,308,000

Stormwater receives $12,401,553 in FY26 with $31,762,061 is allocated for projects throughout the plan. It constitutes 1.50% of the total projects in the FY26-30 CIP.

Featured Stormwater Projects:

- **Bowlees Creek Flood Mitigation (SaraBay/Shadbrook area):**
  - Current Funding: $4,550,933
- **Design and Construction of Stormwater Operations Facility:**
  - Current Funding: $216,000
  - FY26-30 Planned Funding: $1,620,000
- **Golf Course Road Land Acquisition:**
  - Current Funding: $9,600,000
- **Palm Aire Stormwater Pipe Replacement and Rehabilitation**:
  - FY26-30 Planned Funding: $8,605,701

- **Rattlesnake Sough Channel Improvements**:
  - FY26-30 Planned Funding: $5,015,076
- **Sylvan Oaks Stormwater Improvement**:
  - FY26-30 Planned Funding: $7,793,604
- **Wade Canal Channel Improvements:**
  - FY26-30 Planned Funding: $7,209,454

Wastewater receives $194,823,000 in FY26, with the remaining funding of $675,592,554 programmed in the Plan. It constitutes 29.64% of total projects in the FY26-30 CIP.

Featured Wastewater Projects:

- **North Regional Water Reclamation Facility Expansion 12.5 MGD:**
  - FY26-30 Planned Funding: $255,003,000
- **Southeast Regional Water Reclamation Facility Capacity Improvements Phases A & B:**
  - Current Funding: $66,789,209
  - FY26-30 Planned Funding: $56,401,000
- **Southeast Regional Water Reclamation Facility Capacity Improvements Phase C:**
  - FY26-30 Planned Funding: $111,485,000
- **Southwest Water Reclamation Facility Expansion to 18 MGD**:
  - Current Funding: $28,072,000
  - FY26-30 Planned Funding: $165,128,000
- **Trailer Estates Restore & Rehabilitation**:
  - Current Funding: $9,859,514
  - FY26-30 Planned Funding: $31,478,000

MANATEE COUNTY GOVERNMENT
Capital Improvement Plan
FY2026 - FY2030

Category: Potable Water
Subcategory: Potable Water Distribution
Project Title: Crosley Estate Water Main Relocation
Department: Public Works
Project Mgr: Albert Rosenstein
Infra. Sales Tax: No
Project #: PJ6006370
Status: Existing

Comprehensive Plan Information

CIE Project: No
LOS/Concurrency: No
Project Need: Other

Project Location

District 4 8374 North Tamiami Trail, Sarasota, FL

Description and Scope

Design, permit, and construct approximately 1,500 linear feet of 6-inch potable water main within the acquired public utility easement along the perimeter of the transferred parcel. The project will include the removal or abandonment of the existing water main and may also include the replacement of existing fire hydrants and potable water service meter(s) with backflow preventers. All hydrants, valves, and services shall be designed and constructed in accordance with Ten State Standards.

Rationale

On February 13, 2024, the Board approved the execution of a County deed transferring nine acres from the Powel Crosley Estate property—including a 20-foot public utility easement along its perimeter—to the New College of Florida Board of Trustees. The transfer is intended to promote community interest and welfare and to serve the best interests of Manatee County residents. A six-inch water main currently runs through the property and will need to be rerouted to accommodate future development of the parcel.

Category: Potable Water **Subcategory:** Potable Water Distribution
Project Title: Artisan Lakes Pkwy - Potable Water Oversizing
Department: Utilities
Project Mgr: Brent Stufflebeam
Infra. Sales Tax: -
Project #: PJ6028171 **Status:** Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: - Project Need: Growth

Project Location

District 1 Artisan Lakes Pkwy at Buckeye Road, Palmetto

Description and Scope

Design, permit, install, and construct approximately 5,000 linear feet of 16" potable water main along Artisan Lakes Pkwy from 200 ft south of Fieldmoor Ct to Buckeye Road. Review, approve, and process the final pay application for the completed work and reimburse the developer based on the terms of the agreement.

Rationale

The purpose of this project is to efficiently expand the County's potable water distribution system for future development in this area. The County's 2035 Potable Water System Master Plan identifies a 16-inch water main along Artisan Lakes Pkwy from Moccasin Wallow Rd to Buckeye Rd. Staff have requested the developer to oversize the potable water main extension from 8-inches to 16-inches from just south of Fieldmoor Ct to Buckeye Rd. This project is to fund the developer's agreement for the potable water main oversizing, from south of Fieldmoor Ct to Portico Ln, and extending the water main from Portico Ln to Buckeye Rd with the improvements being constructed as part of the Artisan Lakes Eaves Bend and Edgestone North subdivisions.

Category: Potable Water **Subcategory:** Potable Water Distribution
Project Title: Marisol Potable Water Oversizing and Extension
Department: Public Works
Project Mgr: Brent Stufflebeam
Infra. Sales Tax: No
Project #: PJ6028172 **Status:** Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: No Project Need: Growth

Project Location

District 5 SR 64 E at Uihlein Rd

Description and Scope

Design, permit, install, and construct 12-inch potable water main extension approximately 2,250 linear feet, from the existing 8-inch water main along SR 64, to the 12-inch water main at Uihlein Road.

Rationale

The County's Potable Water Master Plan identifies the need for the extension of a 12-inch potable water main, along SR 64 from Uihlein Road approximately 2,250-feet. To ensure efficient expansion of the potable water system for future development, County requested that the Developer of the Marisol development (Project) to oversize the potable water main along SR 64 by installing a 12-inch water main, rater than an 8-inch required by the Project, from the existing 8-inch to the existing 12-inch on Uihlein Road. Policy 9.6.2.3 of the Comprehensive Plan authorizes the County to pay for the cost of additional materials necessary for oversizing any component of the County's potable water distribution system where a developer is required to increase system capacity greater than that required by a proposed development. This project is to fund the potable water component of the developer agreement.

Project Title: Erie Road Major Water Main
Department: Public Works Projects
Project Mgr: Craig Hughes
Infra. Sales Tax: -
Project #: PJ6028271
Status: Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: No
Project Need: Growth

Project Location

District 1 Erie Rd-Harrison Ranch Blvd-St. Mary's Mission, Parrish

Description and Scope

This project needs approximately 12,000 feet of 24 inch ductile iron pipe water main. Fire hydrants will be installed every 800 feet and in-line valves every 1,600 feet. Hydrants, services and valves will be installed to County and Ten State Standards.

Rationale

Complete a major looped system for Erie Road and Copperstone Phase One.

Subcategory: Potable Water Distribution
Project Title: Blake Hospital Permanent Potable Water Line
Department: Public Works
Project Mgr: Eddy Zappacosta
Infra. Sales Tax: -
Project #: PJ6042771
Status: Existing

Comprehensive Plan Information

CIE Project: No
LOS/Concurrency: No
Project Need: Other

Project Location

District 3
51st Street West at 21st Avenue West

Description and Scope

Design, permit, install, and construct approximately 3,650 linear fee of 8-inch water main with restraints along 21st Ave W, from the existing 20-inch water main at 51st St W intersection to Blake Hospital's water supply line, including the removal or abandonment of existing asbestos cement pipe and appurtenances.

Rationale

Potable water quality was impacted from storm surge of recent hurricanes to the City of Bradenton's drinking water reservoir thus affecting the water provided to Blake Hospital. A temporary water line was installed, above ground, as an alternative water supply from the County's potable water distribution system. Failure to have an alternative potable water supply could impacts the hospital's ability to treat certain patients and be supplied with sub-standard water quality. This project will relocate the temporary water line under ground and provide a permanent connection of an alternative water supply to Blake Hospital during emergencies. In addition, the project will remove or abandon existing asbestos cement pipe along 21st Ave W between 59th St W and 51st St W.

Project #: PJ6114970
Status: Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes
Project Need: Growth

Project Location

District 1 SR 62 at Sand Marsh Ave, Parrish

Description and Scope

Design, permit, install, and construct approximately 1,900 LF of 12" and 300 LF of 16" potable main along SR 62 from Pioneer Dr to Sand Marsh Ave. Review, approve, and process the final pay application for completed work and reimburse the developer based on terms of the agreement.

Rationale

The purpose of this project is to efficiently expand the County's potable water distribution system for future development in this area. Staff has requested the developer to oversize the potable water main extension from 10-inches to 12-inches. This project is to fund the developer's agreement for the potable main oversizing with the improvements being constructed as part of the Saltmeadows development project.

Project Title:	Dam Road 36 inch Water Main Oversizing		
Department:	Public Works		
Project Mgr:	Jeff Streitmatter		
Infra. Sales Tax:	-		
Project #:	PJ6116471	**Status:**	Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: No Project Need: Growth

Project Location

District 1 Dam Road at SR 64 E, Bradenton

Description and Scope

Design, permit, and construct a 36-inch potable water main along Dam Road from the County's Water Treatment Plant to State Road 64 E.

Rationale

The County's Build Out Water System Master Plan identifies a future need of a 36-inch water main from the County's Water Treatment Plant (Plant) to 44th Ave E. The
Lakewood Ranch Stewardship District (District) is constructing a 16-inch potable watermain along Dam Road from the Plant to State Road 64. To plan for the County's future potable water availability needs, the County requested the watermain to be oversizing to 36-inches. Policy 9.6.2.3, of the County's Comprehensive Plan and Section 2-31-5 of the Code of Ordinances authorizes the County to pay for the cost of additional materials necessary for oversizing any component of the County's potable water distribution system. This project is to fund the associated developer's reimbursement agreement with the District for the additional costs related to the
oversizing.

Department: Utilities
Project Mgr: Paul Haas
Infra. Sales Tax: -
Project #: PJ6120070
Status: Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: -
Project Need: Maintenance, Deficiency

Project Location

Countywide 3647 Cortez Road West, Bradenton, FL 34210

Description and Scope

Manatee County will enter into an agreement with the selected contractor to remove and install new water meters throughout the County over a 30-month period. Contractor shall supervise and direct the Work and shall be responsible for construction means, methods, techniques, sequences, and procedures and for coordinating all portions of the Work under this Agreement. Contractor shall be responsible to pay for labor, materials, equipment, tools, construction equipment and machinery, transportation, and other facilities and services necessary for the execution and completion of the Work. Neptune® T-10, TruFlo, Protectus, and HP water meters with Cellular)R900i integrated register and endpoint will have the appropriate FirstNet or Verizon SIM card for the location. Neptune® R900 Cellular Pit and R900 Cellular Wall endpoints for use with Neptune MACH 10 water meters will have the appropriate FirstNet or Verizon SIM card for the location. All water meters, endpoints, and other materials removed from service will be disposed of properly in a manner to be agreed upon between contractor and the County during the installation. Contractor has first right of refusal for all water meters and measuring chamber assemblies removed from service.

Rationale

The Advanced Metering Infrastructure (AMI) program will enhance the net revenues of the Utility System through more accurate meter readings and billings and a reduction of operating expenses. Selected Contractor will provide documentation of the projected and actual savings realized as part of their contract with the County. The meters will be purchased by the County from a meter supplier. The cost for the AMI program is estimated to be approximately $82 million, divided roughly equally between labor and equipment, over a 30-month construction period. The AMI program is estimated to have a 20 year useful life. Project Benefits Summary. Subject to the terms and conditions of the Agreement, the Contractor and the County agree that the County will be deemed to achieve a total of $114,347,209 in Non-Measured Project Benefits and the Contractor guarantees that the County will achieve a total of $93,796,345 in Measured Project Benefits during the term of this Agreement, for Total Project Benefits of $208,143,554.

Project #: PJPW01220 **Status:** Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: - Project Need: Growth

Project Location

Countywide Countywide

Description and Scope

Participate in development of the potable water transmission system infrastructure by oversizing any component to the system to increase capacity above required for a particular development or project when such increase in size supports the Utilities Master Plan for system capacity.

Rationale

It is more effective to increase the size of potable water infrastructure as it is being developed, rather than replacing it with a larger capacity system. The systems will be sized to serve the planned customer population.

Project Location

District 3
21st St W & 13th Ave Dr W, Bradenton

Description and Scope

This project is to upgrade aging water mains and add fire protection. This project needs +/- 1400 ft of 4"" and +/- 3700 ft of 6"" water mains, six (6) fire hydrant assemblies, fourteen (14) gate valves, and 120 water services. This project is to replace the water mains and services.
Hydrants, services, and valves should be installed according to County and Ten State Standards.

Rationale

Pine Heights Ct was installed in 1966. We are seeing a rapid number of line breaks and leaks in the area due to soft and brittle mains.

Project Location

District 1
17915 Waterline Road, Bradenton

Description and Scope

This project is to design and construct approximately 20,000 square foot (sqft) Concrete Masonry Unit (CMU) block structure to serve as a satellite distribution facility including offices for the distribution staff and breakroom space. Build an adjacent approximately 20,000 square foot (sqft), high-ceilinged pre-engineered, metal warehouse building with a covered, drive-through unloading bay, rollup doors, and heavy duty material storage racks.

Rationale

The distribution group has grown in number with several new staff being added to support the system. The current space is no longer sufficient to meets the needs of the distribution group. The new facility will be sized to accommodate the needs of the growing staff.

Project Mgr: Jeff Streitmatter
Infra. Sales Tax: -
Project #: PJTP26010
Status: Requested

Comprehensive Plan Information

CIE Project: No
LOS/Concurrency: No
Project Need: Maintenance

Project Location

District 3

Description and Scope

This project is to improve the water system. This project needs +/- 6,602 3770 ft of 6" water main, +/- 221 4640 ft of 4" water main, 383 ft of 2" water main, nine fire hydrant assemblies, 22 40 gate valves, three blow-off assemblies, and 130 services. Hydrants, services, and valves should be installed to County and Ten State Standards.

Rationale

Replace water main installed in 1966 that has reached the end of its service life,. This project will help maintain water quality and improve fire flow.

Project #: PJ6019210
Status: Existing

Comprehensive Plan Information

CIE Project: No
LOS/Concurrency: No
Project Need: Other

Project Location

District 4 3647 Cortez Road West, Bradenton

Description and Scope

Miscellaneous renovation to individual offices and a full renovation of a small area of the building for fitness area, showers, restroom, and lockers; also, modular wall renovation of a call center. Typical renovation of wear and tear items including flooring, ceiling, paint, tile, and walls. Small, required maintenance and repair or replacement of HVAC, lighting, plumbing and electrical including low voltage security, roof repair or replacement, and other appurtenances required for a functional facility.

Rationale

Following the acquisition of the new building, it is imperative that we undertake renovations to ensure the facility complies with the essential standards. This is essential to enable Utilities to relocate and serve our citizens with the same level of efficiency they provided at their previous location.

Infra. Sales Tax: -
Project #: PJ6050771
Status: Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes
Project Need: Maintenance, Growth

Project Location

District 3 11860 Cortez Rd. W, Bradenton

Description and Scope

Replacement of one existing pump with two pumps (one duty and one standby)sized as inline boosters, including minor piping changes and construction of a dedicated fill line to the ground storage tank (GST).

Rationale

Analysis of updated water model and pump data showed that operating existing pumps as inline boosters causes excess wear and tear due to operating out of their suggested operating ranges. Replacing one of the pumps with one duty and one standby pump, both sized as inline booster pumps, will optimize pump efficiency and operations in order to meet 2025 water demands. Installing a dedicated fill line would allow the tanks to simultaneously fill and be pumped from, making system operations less complex.

Project Title: Replacement of Banner Customer Information & Billing System
Department: Utilities
Project Mgr: Tina Neri
Infra. Sales Tax: -
Project #: PJ6077501
Status: Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: -
Project Need: Maintenance

Project Location

Countywide Utilities Administration Building; 4410 66th St W, Bradenton

Description and Scope

Replace current customer information system with a more robust system that meets current needs for the Utilities Department.

Rationale

The current Banner Customer Information and Billing System was deployed by Manatee County Utilities in 1999 and went live in the year 2000. This software was upgraded to version 4.2.1 in July 2011, and to version 4.4 in June 2017. There are many more robust Customer Information System (CIS) systems on the market that include features such as mobile applications, comprehensive business intelligence, GIS interfaces, bar-coded payment stubs, intuitive customer portals, and many more. Additionally, some of the new CIS systems provide cloud-based platforms which can provide potential cost savings on hardware and upgrade costs. With the vast availability of technology, it seems prudent at this time to initiate a search for a more flexible and responsive system - one that is more "user friendly" and easier for the Call Center Reps to navigate, ultimately providing better customer service to County residents as well as potential cost savings over existing options.

Status: Existing

Comprehensive Plan Information

CIE Project: No
LOS/Concurrency: No
Project Need: Maintenance

Project Location

Multi-district 5th St-63rd Ave W-US 41-69th Ave, Bradenton

Description and Scope

Replacement of aged (1965) failing pipe with approximately 6,600 feet of 12 inch water main, fire hydrants, six inch gates valves, and 12 x 6 tee services interconnecting between 63rd Avenue East to US 41. Hydrants, services and valves will be installed to County and Ten State Standards.

Rationale

The existing lines have aged and are in poor condition. Access and fire protection are limited and water quality suffers.

Project Title: Elwood I Booster Pump Station, Pump 1,6,7 Replacement
Department: Public Works Projects
Project Mgr: Dafne Barbosa
Infra. Sales Tax: -
Project #: PJ6097370
Status: Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes
Project Need: Maintenance, Growth

Project Location

District 2 4825 44th Ave E, Bradenton

Description and Scope

Replacement of pumps 1, 6, and 7 with three 3,900 gallons per minute (gpm) @ 145 feet pumps, including yard piping changes, pressure sustaining valve, and electrical instrumentation and controls upgrades. Also, construction of a 36 inch dedicated fill line to the ground storage tank, (GST).

Rationale

Analysis of the updated water model showed that replacement of the existing pipe configuration could be reduced to simplify the inflow and discharge of the GSTs. This simplification of the site will also reduce the long term need for replacement parts and field work. The pumps to be replaced were installed in 1966 and are past their 50 year predicted service life. These will be upgraded to achieve additional pumping indicated by the model as necessary to meet max day demands in 2025.

Status: Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: -
Project Need: Maintenance

Project Location

District 3 52nd St-52nd Ct W-23rd Ave-24th Ave Dr W, Bradenton

Description and Scope

Replace approximately 2,000 linear feet of two inch and four inch water mains mostly on easements with poor access and limited fire protection with six inch water mains and 42 new services installed from main to meter. Meters will be relocated to front right-of-way with six valves, three fire hydrants, and eliminate mains on easements. All items will be installed to County and Ten State Standards.

Rationale

To provide fire protection and increase water quality to Grove Haven Subdivision.

Project #: PJ6104170
Status: Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: Yes
Project Need: Maintenance

Project Location

Multi-district
45th St E, Bradenton

Description and Scope

Install approximately 2,400 linear feet of eight inch High Density Polyethylene (HDPE) water main and 300 linear feet of 6 inch water main, three fire hydrants, six - 6 inch gate valves, nine services, and one blowoff. Services and valves will be installed to County and Ten State Standards.

Rationale

Install water main line to proper depth to meet Utilities Standards and for protection and fire flow. Existing water main has a shallow depth and is 50 years old. There is an increased threat of breakage and there is less resistance to external and internal forces due to pipe material being brittle. Pressure surges from nearby Elwood I Booster Pump Station and water hammer are making issues worse.

Project Location

District 3 Hill Crest Drive-Harbor Rd-Park Dr-Fontana Lane, Bradenton

Description and Scope

Replace approximately 7,000 linear feet of 4 inch water main from easement to the right-of-way, including upsizing existing pipe for water quality and to add fire protection. Water main/pipes will be replaced with 6 inch, and include seven fire hydrants, three gate valves, and over 85 services. Services and valves to be installed to County and Ten State Standards.

Rationale

Provide adequate water quality and add fire protection for safety.

CIE Project: -
LOS/Concurrency: -
Project Need: Maintenance

Project Location

District 2 Between 13th St E and 14th St E from 54th Ave E to 54th Ave Dr E , Bradenton

Description and Scope

This Project has thin wall white PVC with glued fittings and some of the lines that are in the ground are not on our Geographic Information System (GIS) or the as built. Installation of 2,281 feet 6" main / 198 feet 4" main / one (1) blowoff, one (1) Relocated Fire Hydrant, nine (9) 6" Gate valves, (39)services plus (19 undeveloped services), one (1) 4" gate valve, one (1) 6" MJ tee.

Hydrant's, Services and Valves should be installed to County and Ten State Standards.

Rationale

Eliminate PVC with glued fittings and install main out of Road where ever possible and a new easement will to be obtained if main is relocated (may have to install with Ducktile Iron (DI) and copper services) Tie in connections at 13th and15th street are 6" main.

Infra. Sales Tax: -
Project #: PJ6110970
Status: Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes
Project Need: Maintenance, Growth

Project Location

District 3 1525 99th St NW, Bradenton

Description and Scope

Replacement of one existing pump with two 2,600 gallons per minute (gpm) @ 30 feet, 30 horsepower pumps, including electrical instrumentation & controls, pressure sustaining valves and yard piping. The County is looking at multiple options to elevate the chemical skids and electrical systems above the flood plain better protect vital county infrastructure.

Rationale

Analysis of updated water model and pump data showed that when existing pumps are used as inline boosters, they are not operating within their suggested operating ranges causing excess wear and tear on the pumps. Replacing one of the pumps with one duty and one standby pump both sized as inline booster pumps will optimize pump efficiency and operations in order to meet 2025 water demands. After Hurricane Helene the NWBPS had significant flooding as such the county is investigating solutions to avoid future damage.

LOS/Concurrency: -
Project Need: Deficiency

Project Location

District 2 811 23rd Ave E, Bradenton

Description and Scope

This project intends to replace mains due to numerous breaks (see map attached for location of proposed work). This project would replace approximately +/- 1,938 LF of 6" DIP, (15) 6" gate valves, (4) 4" gate valves, (2) new fire hydrant assemblies. It would also include grouting of abandoned water lines, (32) reestablish water service connections, and restoration to include asphalt, sidewalk, etc. All items would be installed to County and Ten State Standards.

Rationale

The watermain in the area of 23rd Ave E from 5th St E to 9th St E has become problematic due to age of pipe and numerous main breaks.

Status: Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: -
Project Need: Maintenance

Project Location

District 2 37th Ave E & 10th St Ct E, Bradenton

Description and Scope

Install approximately 1,900 feet of 2 inch and 6 inch water mains, two (2) fire hydrant assemblies, nine (9) gate valves, thirty-four (34) potential water services and grouting of lines in easements.

Hydrants, services and valves to be installed to County and Ten State Standards.

Rationale

This project will improve fire flow, maintain water quality and eliminate rear easements.

Project Title: End of Service Life Distribution Line Replacement
Department: Public Works Projects
Project Mgr: Dafne Barbosa
Infra. Sales Tax: -
Project #: PJPW01110
Status: Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: -
Project Need: Maintenance

Project Location

Countywide Countywide

Description and Scope

Replace older, failing or targeted distribution system lines based on age and predicted service life to be determined by the 2012 Distribution System Master Plan, subsequent KANEW (database software) model runs and field investigations.

Rationale

Utilities will use the model results from the KANEW analysis that Utility Engineering performed in conjunction with the Distribution Master Plan. The KANEW analysis predicts when pipe elements will reach the end of their service lives based on life-expectancy parameters, and identifies those lines that should be replaced, before they fail.

Project Location

District 2 57th Ave W & 63rd Ave W, Bradenton

Description and Scope

This project to remove or grout old 8 inch asbestos cement line on ditch bank, loop dead ends on 60th Avenue West at 1st Street East and US41 for fire flow. This Project needs +/- 3,800 Feet of 8 inch water main removed or grouted, +/- 700 feet of water main looped with 8 inch crossing, two (2) fire hydrants, eleven (11) gate valves, and fourteen (14) potential water services. Hydrants, services and valves to be installed to County and Ten State Standards.

Rationale

This project will remove the aging asbestos cement (AC) water main on the ditch bank and loop a new line to maintain water quality and improve fire flow.

Subcategory: Potable Water Renewal/Replacement
Project Title: Thunder Bay Water Main Replacement
Department: Public Works Projects
Project Mgr: Jeff Streitmatter
Infra. Sales Tax: -
Project #: PJPW02014
Status: Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: -
Project Need: Maintenance

Project Location

Multi-district 62nd Ave Dr E from 12th St E to cul-de-sac, Bradenton

Description and Scope

This project needs +/- 85 feet of six (6) inch water main, +/- 355 feet of four (4) inch water main and +/- 85 feet of two (2) inch water main, two (2) fire hydrant assemblies, one (1) gate valve, one (1) blow off assembly and (21) services.

Rationale

This project is to improve fire flow and maintain water quality. Relocate water main and services to right of way. The new waterline down the cul-de-sac will improve fire flow in the area. It would also move the water main and services into the right of way (instead of through backyards). This is for better access and ability to service the line.

Subcategory: Potable Water Renewal/Replacement
Project Title: Elwood Booster Pump Station Upgrades Phase 2
Department: Public Works Projects
Project Mgr: Jeff Streitmatter
Infra. Sales Tax: -
Project #: PJPW02131
Status: Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes
Project Need: Growth, Other

Project Location

District 2 4825 44th Ave E., Bradenton

Description and Scope

Upgrades to the booster pump station to consist of: voltage conversion of station from 2400V (non-typical) to 480V, new pumps with Variable Frequency Drives (VFDs) to replace inline booster pumps (#2, 3, 4, and 5) sized to meet current and future demands, new building with pump room, electrical room, and office space, instrumentation and control (I&C) and electrical, and associated yard piping. Project will also require a new building.

Rationale

Replacement of the inline booster pumps is recommended to improve water quality, simplify station operations, and meet current and future demands. Conversion from non-typical voltage to standard 480V will improve availability of maintenance parts and skilled technicians, as well as improve safety of employees required to perform maintenance. New building will replace current facility which will be over 60 years old, will allow for continued operation of station during construction, and will be designed to for easier access for maintenance and inspections

Project Location

District 3 Cortez Rd to 46th Ave W between 87th St Ct W to 86th St W, Bradenton

Description and Scope

This Project is to improve water system (see map attached for location of proposed main). This Project needs +/- 2,505' of 6" water main, +/- 110' of 4" water main and 160' of 2" water main. (5) fire hydrant assemblies, (6) gate valves, (2) Blow off assemblies and 51 services.

Hydrants, services and valves should be installed to County and Ten State Standards.

Rationale

This project will replace 2" water main (of unknown material) built in 1974 in order to ensure replacement prior to end of useful life. Upsizing to 4" and 6" will help maintain water quality and improve fire flow.

Description and Scope

This Project is to eliminate existing 2' and 4" mains and install accordingly to the water model. (see map attached for location of proposed main) This Project needs +/- 2461 Ft of 6" water main, 100 Ft 2" water main, (4) fire hydrant assemblies, (9) gate valves, (1) reducer, (14) same side services, (12) road crossing services and (1) blow off assembly.

Hydrants, services and valves should be installed to County and Ten State Standards.

Rationale

This system was installed around 1977 and is approaching end of service life. There are currently no fire hydrants. This project will upsize the lines and create a looped system. This will improve fire flow and water quality.

Project Need: Maintenance

Project Location

District 2 26th Ave. E. and 18th St. E., Bradenton

Description and Scope

This project is improving the Oakwood Subdivision area (see map attached for location of proposed main). This project needs +/- 4,232 feet of 6" water main, (6) fire hydrant assemblies, (7) gate valves and (59) services. This will help maintain water quality and improve fire flow. Hydrants, services and valves should be installed to County and Ten State Standards.

Rationale

There has been constant repairs to existing 4" water main at this location indicating that the pipe has deteriorated to the point of needing replacement. Upsizing to 6" will improve water quality and fire flow.

Project #: PJPW02155
Status: Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: -
Project Need: Maintenance

Project Location

District 3 2nd Ave NW and 43rd St W, Bradenton

Description and Scope

This project is to upgrade old 4" AC water main and add fire protection (see map attached for location of proposed main). This project needs +/- 7,428 ft of 6" water main, 825' of 8" water main, 7 fire hydrant assemblies, 27 gate valves, 97 services & 3 blowoff assemblies. Hydrants, services and valves should be installed to County and Ten State Standards.

Rationale

Current water mains are thin wall 4" asbestos cement (AC) that were installed in 1966 and have reached the end of their useful life. Upsizing the mains will improve water quality and fire flow in the area.

Category: Potable Water
Subcategory: Potable Water Renewal/Replacement
Project Title: WTP to SR64 - 36" PCCP Replacement
Department: Utilities
Project Mgr: Jim Renneberg
Infra. Sales Tax: -
Project #: PJPW02260
Status: Existing

Comprehensive Plan Information

CIE Project: No
LOS/Concurrency: No
Project Need: Maintenance

Project Location

District 1 Waterline Rd from WTP to Rye Rd, Rye Rd to SR 64

Description and Scope

Replace 3.1 miles (16,368 LF) of 36" PCCP with 36" Ductile Iron Pipe (DIP). Sections of the new pipe must be installed and put into service before the similar stretch of old pipe can be removed from service. Old pipe is to be removed from the Right-of-Way (ROW) and not abandoned in place. Includes new services, hydrants, and valves as needed. The first phase of this project will include surveying and evaluation of potential land acquisition requirements.

Rationale

This project is one of several to replace aging large diameter Pre-Stressed Cylinder Concrete Pipe (PCCP) in the Manatee County distribution system. PCCP pipe failures require specialized repairs, which are costly and time consuming and cannot be handled by in house forces. In addition, many of the larger, critical transmission mains in the system are PCCP. Due to the consequence of failure of this type of pipe, PCCP will be phased out in Manatee County. This segment was constructed in 1966, is one of the oldest pipes in the system and is a direct transmission main from the Water Treatment Plant (WTP).

Capital Improvement Plan
FY2026 - FY2030

Category: Potable Water
Subcategory: Potable Water Renewal/Replacement
Project Title: Morgan Johnson Rd to 40th Ave E - 36" PCCP Replacement
Department: Utilities
Project Mgr: Jeff Streitmatter
Infra. Sales Tax: -
Project #: PJPW02262
Status: Existing

Comprehensive Plan Information

CIE Project: No
LOS/Concurrency: No
Project Need: Maintenance

Project Location

Multi-district
Morgan Johnson Rd from south of 64 to 40th Ave E

Description and Scope

Replace 1.7 miles (8,976 LF) of 36" PCCP with 36" DIP. Sections of the new pipe must be installed and put into service before the similar stretch of old pipe can be removed from service. Old pipe is to be removed from the Right-of-Way (ROW) and not abandoned in place. Install 0.7 miles (3,696 LF) of smaller diameter waterline on 40th Avenue East from Morgan Johnson Road to Braden River, along 51st Street East from 44th Avenue East to 39th Avenue East, and on 39th Avenue East to Braden River. Includes new services, hydrants, and valves as needed. The first phase of this project will include surveying and evaluation of potential land acquisition requirements.

Rationale

This project is one of several to replace aging large diameter Prestressed Concrete Cylinder Pipe (PCCP) in the Manatee County distribution system. PCCP pipe failures require specialized repairs, which are costly and time consuming and cannot be handled by in house forces. Due to the consequence of failure of this type of pipe, PCCP will be phased out in Manatee County. This project will replace the 36" PCCP along Morgan Johnson Rd south from SR64 to the new 36" Ductile Iron Pipe (DIP) just south of 40th Avenue East installed with the 44th Avenue East project. Since that project includes a new 36" river crossing and tie-in to the Elwood booster pump station, the old river crossing can be abandoned. New, small diameter, waterline will be installed along 40th Avenue East, 39th Avenue East, and 51st East to 44th Avenue East sized for appropriate water quality and fire flow.

Comprehensive Plan Information

CIE Project: No
LOS/Concurrency: No Project Need: Maintenance

Project Location

District 2 East of 4119 44th Ave E to 38th Ave E to 24th St E

Description and Scope

Replace approximately 2.0 miles (10,560 LF) of 36" PCCP with 36" DIP from just east of 4119 44th Avenue East north to 38th Avenue East then west to 24th Street East. Sections of the new pipe must be installed and put into service before the similar stretch of old pipe can be removed from service. Includes new services, hydrants, and valves as needed. The first phase of this project will include surveying and evaluation of potential land acquisition requirements.

Rationale

This project is one of several to replace aging large diameter Prestressed Concrete Cylinder Pipe (PCCP) in the Manatee County distribution system. PCCP pipe failures require specialized repairs, which are costly and time consuming and cannot be handled by in house forces. In addition, many of the larger, critical transmission mains in the system are PCCP. Due to the consequence of failure of this type of pipe, PCCP will be phased out in Manatee County. This segment was constructed in 1966 and is one of the oldest pipes in the system. A portion of the PCCP pipe, from the start of this project east to the Elwood 1 booster pump station, was replaced with Ductile Iron Pipe (DIP) as part the 44th Avenue East project. This will replace the remainder of that segment of 1966 installed 36" PCCP pipe.

Project Location

District 2 15th St E, Between 44th Ave E and 49th Ave E, Bradenton

Description and Scope

This project is to relocate a 24" water main outside of the Florida Department of Transportation (FDOT) ditch. This project needs +/- 2,600 LF 24" Ductile Iron Pipe (DIP), 145 LF 8" DIP, 75 LF 4" DIP, three (3) fire hydrant assemblies, two (2) 24" gate valves, (2) 8" gate valves, one (1) 4" tap valve, (1) 2" FIP gate valve, (1) 24"x8" cross, (1) 8" plug, (1) 24"x4" tap sleeve, (1) 24"x2" tap sleeve, (1) 24"x8" tee, (1) 8"x6" reducer, (1) 2" long service, (1) 2" short service, (3) 1" long service, (1) 1" short service. Hydrants, services, and valves should be installed to County and Ten State Standards.

Rationale

This project will replace old 24" Water Main that was installed in 1967 and has reached end of service life. This project will also add fire protection to the area.

39th St E and 44th Ave E, Bradenton

Description and Scope

This project is to reroute new 36" water main and eliminate easement. This project needs +/- 2,811 ft of 36" water main, five (5) fire hydrant assemblies, eight (8) gate valves, one (1) reducer and 18 services. Hydrants, services and valves should be installed to County and Ten State Standards.

Rationale

This project will replace 36" Pre-Stressed Cylinder Concrete Pipe (PCCP) water main installed 1966. Some portion of the water main is in easement area which shall be eliminated and the new water main will be to cul-de-sac standard. Additionally, more fire hydrants shall be installed to improve fire protection.

Project #: PJTP25005
Status: Existing

Comprehensive Plan Information

CIE Project: No
LOS/Concurrency: No
Project Need: Maintenance

Project Location

District 3 From Cortez Rd to 26th Ave W Between 26th St W to 32nd St W

Description and Scope

This project is to replace aging water mains. This project includes +/- 1,900 LF 8" DIP, +/- 3,210 LF 6" DIP, gate valves, 15 fire hydrant assemblies, and 31 services.

Hydrants, services and valves should be installed to County and Ten State Standards.

Rationale

This project will replace end-of-life water mains that were installed in 1965, 1966, 1968, 1978, and 1980. Portions of this project are some of the oldest pipes in Manatee County. The area has become increasingly problematic with leaks and breaks. This project will also improve fire protection with the addition of fire hydrants and 6" DIP needed to meet current requirements

CIE Project: -
LOS/Concurrency: No
Project Need: Maintenance

Project Location

District 1 104th Ave E and 25th St E, Bradenton

Description and Scope

This project is to upgrade an aging 4" water main and add fire protection. This project needs +/- 2,920 ft of 6" water main, two (2) fire hydrant assemblies, five (5) gate valves, one (1) blow-off assembly and six (6) services. Hydrants, services and valves should be installed to County and Ten State Standards.

Rationale

This project will replace a 4" water main that was installed in 1977 and has reached end of service life as well as add fire protection to the area.

Project Location

District 4 Oak Terrace Subdivision, Bradenton

Description and Scope

This project is to replace aging water mains. This project needs +/- 4,870 ft of 6" water main, two (2) fire hydrant assemblies, five (5) gate valves, and 104 services. This project also includes abandoning of existing 6" water main. Hydrants, services and valves should be installed to County and Ten State Standards.

Rationale

This project will replace end-of-life service water mains that were installed in 1986. This area has experienced multiple breaks under the sidewalk. The leaks and repairs needed have resulted in property damage.

LOS/Concurrency: -
Project Need: Maintenance

Project Location

District 4 45th Ave Cir W & 14th St W, Bradenton

Description and Scope

This project is to replace an aging 3" water main and add fire protection. This project needs +/- 1,192 ft of 6" water main, two (2) fire hydrant assemblies, two (2) gate valves, and twelve (12) services. Hydrants, services and valves should be installed to County and Ten State Standards.

Rationale

This current 3" water main (thin wall PVC) was installed in 1967 and has reached end of life. This project will replace that line, add fire protection, and create a looped water system. This will improve fire protection and water quality.

Status: Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: -
Project Need: Maintenance

Project Location

District 1 Countywide

Description and Scope

Purchase land subject to recurring flooding within the Manatee River Floodway.

Rationale

To relieve residents who live in the downstream area of recurring flooding conditions by purchasing properties and facilitating relocation.

Project Title: Lake Manatee Dam Repairs - Phase 2
Department: Public Works Projects
Project Mgr: Albert Rosenstein
Infra. Sales Tax: -
Project #: PJ6108870
Status: Existing

Comprehensive Plan Information

CIE Project: No
LOS/Concurrency: No
Project Need: Deficiency

Project Location

District 1 Dam Road, Bradenton

Description and Scope

This project will address any potential voids and provide geotechnical stabilization below dam features. This includes the upstream approach walls that extend out into the lake and on the downstream side, training walls, spillway and stilling basin. The approach walls provide strength to the dam, and this project will significantly bolster and reinforce the structure. The tainter gates that control the release of water are being rehabilitated with new controls, various mechanical components and monitoring element upgrades to also improve overall dam operations and safety. The dam will also be equipped with a new embankment stability monitoring system and address the long segments of the dam face that are affected by wave action. This is an operational, high hazard dam that remains in continuous service and includes a secondary spillway system north of the dam to route water downstream during high flows or operational maintenance activities that are being completed.

Rationale

The Lake Manatee Dam was built approx. 60 years ago and it had a clay core which extended down to just below sea level in some areas and was considered sufficient at the time. Current dam designs would include a deep seepage barrier to address seepage and the potential for subsequent void formation. Adding these features will improve the safety and potentially extend the life of the dam.

FY2026 - FY2030

Category: Potable Water
Subcategory: Potable Water Supply
Project Title: WTP Transmission Line Valves
Department: Utilities
Project Mgr: Paul Haas
Infra. Sales Tax: -
Project #: PJ6116470
Status: Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: -
Project Need: Maintenance

Project Location

District 1 17915 Waterline Rd, Bradenton, FL

Description and Scope

Install new valves to transmission lines leaving the Water Treatment Plant (WTP) to allow for proper isolation of lines. Current valves do not hold. Install two (2) 36" gate valves, one (1) 42" gate valve, and one (1) 54" gate valve. Include required sleeves, Mechanical Joint (MJ) kits, megalugs, and Ductile Iron (DI) pipe.

Rationale

There are several transmission mains leaving the WTP to serve the potable water distribution system. Many of these mains are older Pre-Stressed Cylinder Concrete Pipe (PCCP), difficult to repair. Current valves do not hold and do not allow for proper isolation of the area in the event of a leak or break on one of these mains. Installation of new valves will ensure isolation will be possible in the event of future breaks keeping water service to the County while repairs are performed.

Category: Potable Water **Subcategory:** Potable Water Supply
Project Title: Lake Manatee Dam Spillway Replacement Project
Department: Utilities
Project Mgr: Jeff Streitmatter
Infra. Sales Tax: -
Project #: PJPW02251 **Status:** Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: - Project Need: Deficiency

Project Location

District 1 17915 Waterline Road, Bradenton, FL 34212

Description and Scope

This project is the replacement of the current primary and auxiliary dam spillways with structures, designed applying current dam design geotechnical engineering approaches and technology. The new spillway will be located north of the current primary spillway and will release water to the river channel much as it does now. The design will be an approximately 300-foot wide, passive labyrinth style overflow weir with sections of controllable Obermyer gates and/or sluice gates for dynamic release. The current primary and auxiliary spillways will be abandoned, sealed and raised as needed. This project comprises predesign, design, permitting and construction efforts.

Rationale

The existing spillway for the dam does not reflect current geotechnical/structural design standards and approaches for high hazard dams. The existing dam also has remnants of a failed upstream cofferdam and a heaved approach slab that adds significant risk to doing any refurbishment work in those areas. The County has attempted to bid upstream construction repair work without success because of the risk associated with the current design and past, failed repair attempts. With the importance of public safety, water supply, risk, and cost of repair, it's prudent to replace the current spillway using modern standards and approaches.

Category: Potable Water
Subcategory: Potable Water Supply
Project Title: Lake Manatee WTP D Basin Addition
Department: Utilities
Project Mgr: Jeff Streitmatter
Infra. Sales Tax: -
Project #: PJPW02282
Status: Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes
Project Need: Growth, Deficiency

Project Location

District 1 17915 Waterline Road, Bradenton, FL 34212

Description and Scope

This project involves the addition of a new water treatment basin, including all required appurtenances, materials, and equipment (referred to as Basin D). This will also include needed transfer pump capabilities to the Ground Storage Tanks. The existing Basin(s) will be modified to allow for the treatment of additional groundwater through piping upgrades. Exact capacity needs to be determined during the design phase, but anticipated to be in the 30-60MGD range. The project includes engineering, design, and construction of the new facilities. Additionally, the high service pump station at the Water Treatment Plant (WTP) will be expanded, including the installation of two (2) new 8,500 GPM (12.3 MGD) vertical turbine pumps with variable frequency drives (VFDs). This expansion will also incorporate all necessary electrical system components and SCADA integration.

Rationale

The current WTP Ground Storage High Service Pump Station is equipped with three (3) vertical turbine pumps, each with a design capacity of 8,500 GPM at 231 feet of Total Dynamic Head (TDH). This configuration provides a firm capacity of 24.5 MGD (17,000 GPM). With all three pumps running, the station can pump up to 36.7 MGD (25,500 GPM). The station draws water from the two (2) 10.0 Million Gallon (MG) Ground Storage Tanks (totaling 20 MG) and was originally designed with the ability to expand to five (5) pumps. Due to increasing water demands, the addition of two (2) additional pumps is necessary. This will increase the capacity to 61.2 MGD (42,500 GPM) with all pumps in operation. The new pumps will be sized to match the existing ones and will include VFDs to provide operational flexibility. Currently, the WTP has two surface water treatment basins, Basin A and Basin B, with treatment capacities of 24 MGD and 30 MGD, respectively. Groundwater is treated in Basin C, which has a 30 MGD capacity and is divided into two trains. The current water demand has reached a point where the maximum daily demand during peak spring times exceeds the firm capacity of the sedimentation basins. Additionally, during the rest of the year, it can be challenging to meet daily demands if either of the larger basins is offline for maintenance. Given that long-term rehabilitation projects can take between 6 to 18 months, it is increasingly risky to take basins offline for repair and maintenance without potentially jeopardizing the water supply. Furthermore, under the Florida Administrative Code (F.A.C.) 62-555.348, additional treatment capacity must be planned when maximum daily demand exceeds 75% of the maximum treatment capacity. The addition of Basin D will provide the necessary firm capacity, addressing regulatory concerns and ensuring reliable service.

Category: Potable Water **Subcategory:** Potable Water Supply
Project Title: Potable Water Aquifer Storage & Recovery (ASR) Expansion
Department: Utilities
Project Mgr: Jeff Streitmatter
Infra. Sales Tax: -
Project #: PJPW02295 **Status:** Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: Yes Project Need: Growth, Deficiency

Project Location

District 1 17915 Waterline Road, Bradenton

Description and Scope

This project will expand the current potable water aquifer storage and recovery (ASR) system at the Lake Manatee Water Treatment Plant (WTP). The current ASR system has six (6) wells and a permitted capacity of 12 Million Gallons per Day (MGD) recharge and 11.44 MGD recovery. The wellfield stores water for use during emergencies such as hurricanes and extended droughts. The current ASR system can provide 10 MGD for 180 days. Excess surface water is treated during the rainy season and stored underground. This project will include six (6) new ASR Wells, Piping, Filters and additional Transfer Pumping Capacity.

(Note: a treatment basin is not included; one will be built under a different project and will be in place prior to the ASR expansion)

Rationale

The Manatee River is a seasonally abundant surface water supply. There are four months per year when excess surface water is discharged over the dam and that water is available to be harvested, filtered, and stored in potable water ASR wells so it can be harnessed during the dry season to meet demands. Lake Manatee has an operational volume of 5.9 billion gallons, or 130 days of supply at current demands. The existing ASR system has an operational volume of 1.8 billion gallons, which adds 40 days of supply for 170 days total. Doubling the ASR System will add another 40 days of system storage and is expected to increase the effective system yield by 3 - 4 MGD, which is needed for growth.

Project Location

District 4 Tallevast Road at Tuttle Ave, Sarasota

Description and Scope

Replace the existing 16" Ductile Iron (DI) Pipe for the watermain and reconfigure the watermain due to the mast arm traffic signal at the Tallevast Road and Tuttle Ave intersection. The current transportation CIP project has been designed and the necessity for moving the watermain was discovered during this design work.

Rationale

The project is to add north and south bound turn lanes. Due to this scope, the mast arm traffic signal had to be replaced, the existing drainage had to be replaced and the existing watermain was impacted by the drainage.

Project Location

District 1 Erie Rd - Martha Road to - US 301, Parrish

Description and Scope

The Erie Rd E/W Phase for roadway functional improvements is being changed to 2-lane to 4-lane widening from Martha Rd to US301. This project aligns to be the potable water relocations for the transportation project.

Rationale

The Erie Rd E/W Phase for roadway functional improvements is no longer being considered. Instead, the transportation project is changed to 2-lane to 4-lane widening from Martha Rd to US301. The original Erie Rd E/W Phase had associated projects for the utility relocations and this one is being changed to match the new transportation project.

Project Location

Multi-district Ellenton Gillette-US301-Moccasin Wallow, Palmetto

Description and Scope

Replace 2,450 linear feet of 12 inch PVC pipe with 12 inch ductile iron pipe. The project will replace existing water main located under existing pavement with new 12 inch PVC water main located outside of pavement along with hydrants and services.

Rationale

Widening of existing roadway to 24 feet.

Status: Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes
Project Need: Growth

Project Location

Multi-district 44th Ave-45th St-44th Ave Plz E, Bradenton

Description and Scope

Replacement and relocation of current 36 inch water main. The road is being widened from two lanes to four lanes divided with a new bridge over the Braden River. In addition to the utility relocations required due to the roadway expansion, the county has requested a new 36 inch water main to be installed crossing the Braden River.

Rationale

The current water main was installed in 1965, with the addition of 44th Avenue, this water main is necessary and will now cross the Braden River.

Project Title: US 41 Sidewalk, 69th Avenue West (Bay Drive) to Cortez Road - Potable Water Relocation
Department: Public Works Projects
Project Mgr: Eddy Zappacosta
Infra. Sales Tax: -
Project #: PJ6099270
Status: Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: -
Project Need: Other

Project Location

Multi-district 69th Ave W to Cortez Rd, Bradenton

Description and Scope

Protecting the existing AC 10-inch and 6-inch water mains on US 41 from new shallow foundation light pole installations. This including installing 12 LF of split casing around the existing AC watermain at the new light pole locations. This includes keeping an 18-inch clearance from the new spread footer foundation to the casing pipe. If 18-inch clearance is not met, a 20 LF section of AC watermain will be replaced with ductile iron and installed in 12LF of split casing under the spread footer foundation. Other miscellaneous water main relocations are also included to accommodate a culvert crossing and new signalizations at intersections.

Rationale

The Florida Department of Transportation (FDOT) is completing a sidewalk and lighting safety project in this corridor. The existing Asbestos Cement (AC) water main is old and brittle concrete that is prone to cracking when installing the new lighting spread footings and signalization improvements. The existing pipe will be designed and protected so the County can still maintain and protect their water infrastructure.

Status: Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: -
Project Need: Other

Project Location

District 4 US 41 from 53rd Ave W. to Cortez Rd, Bradenton

Description and Scope

Replace approximately 5400 LF of 10-inch AC water main with 10-inch Ductile Iron Pipe (DIP). This includes 200 LF of 20-inch water main replacement and 150 LF of 24-inch water main replacement with 3 watermains crossing US 41. Water main, water services, and valves to be installed to County and Ten State Standards.

Rationale

The Florida Department of Transportation (FDOT) is completing a sidewalk and lighting safety project in this corridor. The existing Asbestos Cement (AC) water main is old and brittle concrete that is prone to cracking when installing the new lighting spread footings and sidewalk. The new pipe will be replacing the old main and designed so the County can still maintain and protect their water infrastructure. It will increase fire protection and water quality.

Project #: PJ6099870
Status: Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: -
Project Need: Growth

Project Location

Countywide
Lockwood Ridge Rd, Bradenton

Description and Scope

Ductile Iron Pipe (DIP) and fittings post restraining (with split restraints) of existing 30 and 36 potable water transmission pipelines due to grade changes associated with the turn lanes resulting in reduced cover over the pipelines. Post-restraining of existing pipelines requires excavation of the existing pipeline joints to allow for the installation of mechanical joint restraints. Enough joints will need to be restrained to provide an overall retrained joint length of pipe to withstand internal pressure forces within the pipelines.

Rationale

Post restraining with split restraints required to protect road where less than 2ft of cover at the Lockwood Ridge Road @ Shopping Center Entrance Intersection (South of State Road 70 - Walmart & Publix). This project is in conjunction with the Transportation Intersection improvement adopted CIP (6099860).

LOS/Concurrency: No
Project Need: Other

Project Location

District 4 Honore Ave at Old Farm Rd, Bradenton

Description and Scope

Relocate 400 linear feet of potable water main around the proposed roundabout to minimize impacts and conflicts.

Rationale

The existing watermain's alignment traverses the proposed roundabout and center island. County policy desires utilities be routed around roundabout improvements to minimize pipe under pavement. The design also attempts to minimize conflicts with the typical roadway appurtenances such as roadway lighting. In addition, the proposed roundabout drainage system conflicts with the existing watermain that needed to be resolved.

Project Location

District 2 15th St E - 63rd Ave E to 60th Ave Dr E, Bradenton

Description and Scope

Relocate/replace water utilities for proposed Florida Department of Transportation (FDOT) road project along 15th Street East from 63rd Ave E to 60th Ave Dr E.

Rationale

Align water utilities with Florida Department of Transportation (FDOT) road and drainage design improvements.

Project Location

District 5 Upper Manatee River Rd N of SR 64 to Ft Hamer Bridge, Bradenton

Description and Scope

Design and construct intermediate sized water line conflict resolutions to accompany planned roadway construction. Design and construct approximately 12,000 LF 42" WM to replace existing aged and failing 42" reinforced concrete pipe.

Rationale

As part of the 4-lane roadway expansion, existing section of water lines must be adjusted and relocated to accommodate new storm water pipes. Within this corridor there is existing aged and failing 42" reinforced concrete water pipes that should be replaced prior to or during the construction of the new 4 lane roadway.

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: -
Project Need: Other

Project Location

District 2 Bus US 41 from 17th Street W to Bayshore Road, Palmetto

Description and Scope

Relocation and adjustment of potable water infrastructure to accommodate the Florida Department of Transportation's (FDOT) SR 45 (US Bus 41) from 17th Street to Bayshore Road resurfacing project.

Rationale

FDOT project 444440-1-52-01 involves widening a roadway shoulder, along with moving and regrading an existing drainage ditch. The proposed drainage ditch will reduce the cover over the existing water-main, which requires relocation to provide sufficient cover.

Project Location

District 1 SR 64 at Lorraine Road, Bradenton

Description and Scope

Utility coordination, relocation and/or adjustments of Manatee County utilities (Potable Water) in the project corridor along SR 64 at Lorraine Road.

Rationale

FDOT project 196022-6-52-01 has a roadway project at Lorraine Road and there are impacts to Manatee County's existing utilities. This CIP project is to coordinate with the FDOT project to determine any conflicts with existing utilities and relocate them during construction.

Project Title: Canoe Creek - Potable Water Oversizing & Extension-Agreement
Department: Public Works Projects
Project Mgr: Brent Stufflebeam
Infra. Sales Tax: -
Project #: PJ6113272
Status: Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes
Project Need: Growth

Project Location

District 1 Golf Course Road at Spencer Parrish Rd, Parrish

Description and Scope

Design, permit, install, and construct (i) a sixteen-inch (16¿) water main extension from Canoe Creek Avenue (127th Ave E) westward to Creekside Park Drive and (ii) install a twelve-inch (12¿) water main extension from Canoe Creek Avenue eastward to Twin Rivers Trail, totaling in approximately 9,600 linear feet. Review, approve, and process the final pay application for completed work and reimburse the developer based on terms of the agreement.

Rationale

The County's potable water master plan requires a 16" and 12" water main to be extended along Golf Course Road, Parrish. This project is to efficiently expand the County's drinking water system for future development in this area. Staff has requested the developer to oversize and extend potable water mains to meet the master plan sizes. Also, this project is to fund the developer's agreement for the water main oversizing with the improvements being constructed as part of the Canoe Creek development project.

Project Location

District 1 Moccasin Wallow Road - US 301 & 115th Ave East, Palmetto

Description and Scope

As part of the road widening project, the water main along with fire hydrants, valves, fittings, and services along the route will be relocated out of the proposed roadway into the right of way or upgrade to DIP. Construction consists of removal and installation of +/- 6,095 linear feet of 30-inch DIP, +/- 799 linear feet of 24-inch DIP, +/- 124 linear feet of 18-inch Steel Casing, +/- 114 linear feet of 24-inch Steel Casing, +/- 189 linear feet of 42-inch Steel Casing, +/- 40 linear feet of 24-inch PVC, +/- 183 linear feet of 12-inch PVC, and +/- 136 linear feet of 8-inch PVC.

Rationale

This project is Segment 1 of a 3 Segment plan, which will widen Moccasin Wallow Road from the east end of the I-75 off ramp area (approximately 75th Street E) east to US 301. The project will relocate water mains as a result of the Moccasin Wallow Road widening project (see transportation project #6071261).

Project Location

District 5 Lorraine Road

Description and Scope

Depending on the Florida Department of Transportation (FDOT) design for the road improvements along SR70 & Lorraine Road, the County will coordinate, design, permit and relocate Manatee County Potable Utilities that conflict with the FDOT project.

Rationale

Coordinate, design, permit and relocate Manatee County Potable Utilities that conflict with the FDOT road widening and Round-a-bout project at SR70 & Lorraine Road. A new watermain will be installed from Lorraine Road to Bourneside Blvd.

Project Need: Maintenance

Project Location

District 2 US41 Desoto Bridge crossing

Description and Scope

Work with FDOT to determine if existing watermain is in conflict with bridge replacement. Design, permit, and construct new 16" watermain as appropriate based on bridge replacement.

Rationale

The Florida Department of Transportation (FDOT) wants to replace the US-41 bridge that goes over the Manatee River. The new bridge might go over the existing watermain and interfere with the installation of bridge supports. The County and FDOT will work together to construct a new watermain as appropriate based on the new bridge.

Project Location

District 1 Upper Manatee River Rd - Gates Creek Bridge, Bradenton

Description and Scope

Relocate the existing water main due to reconstruction of the functionally obsolete existing bridge.

Rationale

The Gates Creek Bridge is structurally obsolete and needs to be replaced. In order to accommodate future widening of Upper Manatee Road, the new bridge will have the future 4-lane divided typical section. The existing 42 inch water main will require relocation.

Project Location

District 2 Memphis Neighborhood, Palmetto

Description and Scope

Adjusting the water laterals along 1st Ave east and 3rd Ave west in the Memphis Neighborhood to avoid conflict with the storm-water pipe that will accommodate the sidewalk installation. Adjusting a water main at 2nd aver W and 21st St W in the Memphis Neighborhood to avoid conflict with the storm-water pipe that will accommodate the sidewalk installation.

Rationale

Due to the age of the Memphis Neighborhood, the exact location of the existing utilities has been difficult to estimate and in turn many of the water laterals and water main locations have been determined on the field to be in conflict. To Accommodate the storm pipe for the sidewalk, the water laterals and water main need to be adjusted.

Category: Potable Water **Subcategory:** Potable Water Treatment
Project Title: WTP Powder Activated Carbon (PAC) Silo Replacement
Department: Utilities
Project Mgr: Paul Haas
Infra. Sales Tax: -
Project #: PJ6013461 **Status:** Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: - Project Need: Deficiency

Project Location

District 1 17915 Waterline Road, Bradenton

Description and Scope

Install new steel carbon silo with 10,000 ft of working capacity and dimensions of approximately 14ft ID and 85 ft tall. Includes electrical, electrical control, Supervisory Control and Data Acquisition (SCADA) communication, pumping equipment, piping, air compressor, tanks and all equipment required and related for successful operation. The new steel carbon silo will be installed on a new concrete pad at a different location than the older silo at the WTP. Demolish and dispose the older carbon silo and appurtenances once the new carbon silo is placed into operation.

Rationale

The silo holds Powder Activated Carbon (PAC) which is utilized to reduce color and odor from the surface water in the reservoir during extended dry periods that correspond with warmer weather or during other changing weather conditions. Without the PAC, the Water Treatment Plant (WTP) will not meet all drinking water regulations and will not meet the Florida Department of Environmental Protection (FDEP) silo inspection. Manatee County Structural Engineering inspected the older silo on 05/17/2023 and found the corrosion at the silo base was far beyond economical repair. Engineers also found the silo has reached the end of its life and that the silo is structurally unsafe.

Project Title: Water Treatment Plant Alum Sludge Dewatering System
Department: Public Works Projects
Project Mgr: Paul Haas
Infra. Sales Tax: -
Project #: PJ6033072 **Status:** Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes Project Need: Growth, Deficiency

Project Location

District 1 17915 Waterline Road, Bradenton

Description and Scope

Mechanical dewatering system for alum sludge at the Water Treatment Plant (WTP) to consist of two decanter centrifuges, two gravity sludge thickeners, three homogenization tanks, centrifuge building, pumping and associated equipment.

Rationale

The WTP currently uses sludge drying beds to receive and dry the alum sludge generated in the surface water treatment process. The current beds do not have enough capacity for the sludge generated at the plant and are a passive dewatering process that is highly dependent on weather conditions and labor intensive. Mechanical dewatering of the alum sludge will ensure the WTP can manage the amount of sludge produced now and into the future in a more efficient and consistent manner. Decant centrifuges were selected as the best technology to meet the needs of the WTP. The system is sized to meet production at the maximum permitted surface water withdrawal.

Infra. Sales Tax: -
Project #: PJ6108871 **Status:** Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: No Project Need: Maintenance, Growth

Project Location

District 1 Manatee County Water Treatment Plant

Description and Scope

Add additional piping components and valves to enable the blending of chemicals at sites other than the blend chamber. Make repairs and provide for improvement at Clearwell C.

Rationale

Project 6050470 Lake Manatee Ultra Filtration Membrane Process Upgrade needs to be split into two phases. There is contract work that needs to be removed from Phase I and constructed under a separate CIP. (54" piping and Clearwell C work) Creating a Phase II stops delay costs in the current project, provides the flexibility for the county to drive the date for the work and eliminates future delay cost to the county should the work need to be postponed under the new CIP.

Infra. Sales Tax: -
Project #: PJ6109670 **Status:** Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: - Project Need: Maintenance

Project Location

District 1 17915 Waterline Rd, Bradenton

Description and Scope

Replace the existing sludge collection systems (traveling bridges) in the treatment basin C with chain and flight. The existing sludge pumps are to be redesigned and replaced.

Rationale

One of the treatment basins at the Water Treatment Plant (WTP), C, is equipped with travelling bridges for sludge collection. These systems are labor intensive and have frequent outages due to operational and maintenance issues. In addition, the equipment is aging, and some components are no longer manufactured or readily available. Replacement of the bridges is recommended. A different technology, chain and flight, is the preferred choice due to its lower capital and operational costs and higher reliability.

Category: Potable Water **Subcategory:** Potable Water Treatment
Project Title: Buffalo Creek Reverse Osmosis Water Treatment Plant
Department: Public Works Projects
Project Mgr: Paul Haas
Infra. Sales Tax: -
Project #: PJ6114070 **Status:** Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes Project Need: Growth

Project Location

District 1 8450 69th St E., Palmetto

Description and Scope

This project is to design and construct a 5 million gallon per day (MGD) reverse osmosis water treatment plant (RO WTP) that will be expandable to 8 MGD. Also included are the associated wellfield, and concentrate disposal system at the Buffalo Creek site. The plant will treat brackish groundwater supplied by a combination of Upper Floridan and Intermediate aquifer wells. Concentrate disposal system to consist of concentrate pump station and piping to connect to Injection Well IW-2, which is located at the North Regional Water Reclamation Facility (NRWRF). Project includes preliminary design, test well drilling, pilot testing, final design, permitting, and construction. Final design activities will include the design for 5 MGD as well for the future expansion to 8 MGD.

Rationale

The Buffalo Creek RO WTP has long represented an important future water supply project for the County to meet growth needs. It was originally conceived nearly two decades ago and is included on the County's consolidated water use permit issued in 2012. Current demand projections indicate the need for this additional supply by 2030 with the plant built to 5 MGD. Early preliminary design phase will allow for submission to the Southwest Florida Water Management District (SWFWMD) for consideration for cooperative funding. Test well and pilot testing is necessary to confirm water quality conditions and inform final design.

Category: Potable Water
Subcategory: Potable Water Treatment
Project Title: WTP Generators and Switchgear Upgrade
Department: Public Works Projects
Project Mgr: Jeff Streitmatter
Infra. Sales Tax: -
Project #: PJPW02017
Status: Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: -
Project Need: Maintenance

Project Location

District 1 17915 Waterline Road, Bradenton

Description and Scope

Upgrades to the Water Treatment Plant (WTP) standby power system to consist of demolition of existing generators, paralleling switchgear, and heat exchangers and the installation of five (5) new engine generators, a new paralleling switchgear, and new fuel storage. The generators will be housed inside weatherproof / soundproof enclosures, while the paralleling switchgear will be housed inside a new prefabricated building.

Rationale

The Water Treatment Plant (WTP) standby power system provides power to operate the plant during a failure of the utility electrical source from Florida Power & Light (FPL). The existing standby generation system (engine-generators and paralleling switchgear) is ay or approaching the end of its useful life, and the WTP has experienced operational and maintenance challenges associated with the existing engine-generators. Due to reliability issues, the WTP requires upgrades to the existing engine-generators, paralleling gear, and associated appurtenances (e.g., cooling system, fuel storage). The new system is sized for the new loads associated with the UF retrofit project and spare for future loads. In the last twenty years, many projects have taken place at the Manatee WTP that impact the total electrical load of the facility.

Subcategory: Potable Water Treatment
Project Title: Water Treatment Plant Lab Expansion
Department: Public Works Projects
Project Mgr: Jeff Streitmatter
Infra. Sales Tax: -
Project #: PJPW02151
Status: Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: -
Project Need: Maintenance

Project Location

District 1 17915 Waterline Road, Bradenton

Description and Scope

This project is to design and construct a 2,000 square foot expansion to the current single story lab building to provide additional space for meetings/trainings, storage, and staff work stations. The northern wall will be extended 25 feet from the building's north entrance approximately 80 feet to the new northeast corner of the structure. There are no major underground utilities in this area. This is a single story addition to the part of the building which is also a single story. Floor, ceiling, and roof elevations will be mirrored. Construction of the annex shall be near completion before cutting in internal doorway access from the existing lab so as to cause the least disruption to lab operations and sensitive analytical instruments and equipment.

Rationale

The laboratory at the water treatment plant was constructed in 1999 and the building has significant useful life remaining. However, staffing and analytical needs have grown significantly since it was designed. Increasingly stringent water quality and laboratory certification regulations and a growing distribution system have increased the sampling load and quality assurance program. Accordingly, the lab has increased the number staff as well as expanded its scope of accreditation. The current space is no longer sufficient to meet the needs of the lab. There is inadequate space for storage of reagents and supplies. The sample receiving area is too small and there is no meeting room or dedicated space for staff work stations in the current floorplan. This project will address these deficiencies

Project #: PJPW02259
Status: Existing

Comprehensive Plan Information

CIE Project: No
LOS/Concurrency: No
Project Need: Deficiency

Project Location

District 1 17915 Waterline Road, Bradenton

Description and Scope

Design and construct approximately 10,000 square foot (sqft), high-ceilinged pre-engineered, metal warehouse building with a covered, drive-through unloading bay, rollup doors, and heavy duty material storage racks. Build an adjacent Concrete Masonry Unit (CMU) block structure with a 4,000 sqft footprint to include a training room, office and breakroom space, and workstations for technicians to repair and rebuild instruments, radios, and other components.

Rationale

The Water Treatment Plant (WTP) operates and maintains the plant, the dam, and remote facilities (wellfield, storage tanks and towers) with all the associated pumps, basins, generators, electrical components, computers, Supervisory Control And Data Acquisition (SCADA), instrumentation, analyzers, and equipment which require around the clock operation, scheduled preventive maintenance and necessary emergency repairs. The maintenance needs have grown due to aging of the facility and new processes coming online. In addition, this group has grown in number with several new staff being added to support the facility. The current space is no longer sufficient to meets the needs of the maintenance group. The new facility will be sized to accommodate the needs of the growing staff with additional warehouse space to allow for stocking of parts for increased redundancy. The warehouse should include climate controlled space for storage and inventory control of instruments, sensors, radio telemetry, and other sophisticated electrical components to be securely maintained.

Project Title: WTP Ground Storage High Service Pump Station Expansion
Department: Utilities
Project Mgr: Jeff Streitmatter
Infra. Sales Tax: -
Project #: PJPW02294 **Status:** Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: Yes Project Need: Growth

Project Location

District 1 17915 Waterline Road, Bradenton

Description and Scope

Expansion/build out of the high service pump station at the ground storage tanks at the Water Treatment Plant (WTP). Project to include installation of two (2) - 8,500 Gallons Per Minute (GPM), (12.3 MGD-Million Gallons per Day) vertical turbine pumps with variable frequency drives (VFDs) as well as all electrical system components and Supervisory Control And Data Acquisition (SCADA) integration.

Rationale

The WTP Ground Storage High Service Pump Station consists of three (3) vertical turbine pumps with a design capacity of 8,500 GPM each at 231 feet Total Dynamic Head (TDH). This provides a firm station capacity of 24.5 Million Gallons per Day (MGD) (17,000 gpm). The station capacity with all three (3) pumps running is 36.7 MGD (25,500 gpm). This station pumps water from the two (2) WTP 10.0 Million Gallons (MG) Ground Storage Tanks (total 20 MG) and was designed to be eventually expanded to include five (5) pumps. Due to increased water demands and to maintain redundancy in the high service pumping system, the need exists to add the final two (2) pumps. This will provide a firm capacity of 49.0 MGD (34,000 gpm) or 61.2 MGD (42,500 gpm) with all pumps in service. Pumps will be sized to match existing and will include variable frequency drives (VFD) for operational flexibility.

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: Yes Project Need: Growth, Deficiency

Project Location

District 1 17915 Waterline Road, Bradenton

Description and Scope

Install approximately 6,200 linear feet of new 10-inch sanitary sewer force main and a new sanitary sewer pump station. Includes excavation, pipe material, installation, maintenance of traffic, testing, placing into operation and restoration. The new force main will run from the water treatment plant to State Road (SR) 64.

Rationale

The existing sanitary sewer force main includes 8-inch PVC and 10-inch High-Density Polyethylene (HDPE) pipe. A centrifuge is planned to be constructed at the water treatment plant and this new process will result in additional (500 gallon per minute) of sanitary sewer flows. The existing force main is undersized to handle these additional flows and a new larger force main will be required. Based on engineering calculations, the new force main will need to be 10-inch diameter to transfer the new sanitary sewer flows from the Water Treatment Plant to the tie-in location at SR64.

Project #: PJ6008208 **Status:** Existing

Comprehensive Plan Information

CIE Project: No
LOS/Concurrency: No Project Need: Maintenance

Project Location

District 5 3333 Lena Rd, Bradenton

Description and Scope

Stage II Phase III Installation of new and enhanced landfill gas collection in Stage II including additional horizontal and vertical collection. Extension of primary header to the North in Stage II. Required system maintenance including replacement extraction wells and condensate management systems on existing gas collection system in Stages I and III. Replacement of existing blower flare station including new controls, blowers and flare stack.

Rationale

As buried refuse deteriorates, the gas collection system collects and controls the emission of methane in to the piping system, which reroutes the gas to be used as energy. This eliminates odor and keeps the landfill in compliance with Title V air permit requirements.

Description and Scope

This project aims to enhance the traffic flow in and around the landfill entrance, scale house, and Hazardous Household Waste (HHW) buildings, while also addressing the much needed repairs of the existing roadways throughout the entire site.

Rationale

This comprehensive effort seeks to streamline access to the landfill facilities and ensure the safe and efficient movement of vehicles within the area, ultimately contributing to improved operational efficiency and convenience for all stakeholders involved.

Project Title: New Landfill Site Purchase
Department: Utilities
Project Mgr: Jeff Streitmatter
Infra. Sales Tax: -
Project #: PJSW02156
Status: Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes
Project Need: Deficiency

Project Location

Countywide To Be Determined (TBD)

Description and Scope

With site selection and BOCC approval, staff to negotiate and purchase new landfill site property location. Scope to include: Utilize property criteria evaluation report to select a site or sites to enter into negotiations for their purchase. This project will utilize the site assessment criteria evaluations, appraisals, survey and legal descriptions, legal assistance, property acquisition assistance, engineering due diligence for prospect properties as well as public relations efforts to select the top site for the future landfill site to be located. With BOCC approval, County shall enter into negotiations for purchase under the scope of this work. The end result will be the purchase of the future landfill location.

Rationale

Lena Road landfill began accepting Municipal solid waste in the early 1970's. In 1983, the 1,200 acre site was permitted as a Class 1 waste facility and began filling stage 1 of it's three permitted stages. As of April 2016, the last permitted stage available was opened for operations. This last stage is scheduled to be completely filled in 20 years, ending September 2039. In September of 2019, a plan was presented to the BOCC proposing to begin the process of searching for a new landfill site location ranging in size from approximately 1,000 to 3,000 acres. The estimated time to locate a site, purchase the property, design, permit, and construct the new facility is approximately 20 years. With BOCC approval, staff has evaluated potential sites under developed and established criteria, providing for 5 top locations in Manatee County. Once the top site is evaluated and vetted, staff will proceed with the property purchase.

Project Title: Lena Road Stage II Gas Expansion Phase IV
Department: Public Works Projects
Project Mgr: Mike Sturm
Infra. Sales Tax: -
Project #: PJSW02170 **Status:** Existing

Comprehensive Plan Information

CIE Project: No
LOS/Concurrency: No Project Need: Maintenance

Project Location

District 5 3333 Lena Rd, Bradenton

Description and Scope

Stage II Phase IV Installation of new and enhanced landfill gas collection in Stage II including additional horizontal and vertical collection as waste is filled vertically. Completion or perimeter header in Stage II. Required system maintenance including replacement extraction wells and condensate management systems on existing gas collection system in Stages I, II and III.

Rationale

As buried refuse deteriorates, the gas collection system collects and controls the emission of methane in to the piping system, which reroutes the gas to be used as energy. This eliminates odor and keeps the landfill in compliance with Title V air permit requirements.

Description and Scope

This project will focus on creating four new offices, addressing the growing needs of the organization. Additionally, there will be efforts to improve or potentially replace the current conference room, ensuring that it meets the functional and technological requirements for productive meetings and collaborations.

Rationale

This initiative aims to enhance the working environment, facilitate better communication among team members, and accommodate the evolving demands of the organization's operations.

Category: Stormwater **Subcategory:** -
Project Title: Atlas Organics - Automated Outfall Structures
Department: Public Works
Project Mgr: Kenneth Kohn
Infra. Sales Tax: Yes
Project #: PJ6024262 **Status:** Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes Project Need: Deficiency

Project Location

District 4 3207 71st Ave E, Sarasota

Description and Scope

Install two (2) Automated Outfall Structures (AOS) to create additional flood storage for this watershed. Provide a drainage easement(s) over the stormwater facilities for permitting, construction, inspection, and maintenance of the AOS, supporting communications, and water quality monitoring equipment, as required.

Rationale

Pearce Drain Watershed has a history of overtopping its banks and inundation of adjacent properties and roadway thoroughfares. A majority of the homes within Centre Lake Subdivision had flood claims due to the "No Name" flood event of August 2017. The Pearce Drain Watershed Management Plan (WMP) found a deficit in flood storage is causing the inundation of adjacent properties along Pearce Drain. The subsequent Pearce Drain Feasibility Study (Study) determined additional flood storage could be created by lowering the design normal water level of the existing stormwater facilities prior to a forecasted flood event utilizing Automated Outfall Structures (AOS). The Study found that 72 acre-feet of flood storage could be created, depending upon the drawdown timeframe, from installing AOS at this stormwater facility. The AOS may also be utilized to release treated runoff to optimize water quality treatment from these stormwater facilities and help meet national and state mandates to protect receiving waters in the Tampa Bay watershed.

Project #: PJ6028801
Status: Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: -
Project Need: Maintenance

Project Location

Multi-district Manatee Ave-US 41, Bradenton

Description and Scope

Dredge from the mouth of Wares Creek to 9th Avenue West, clear and snag debris from 9th Avenue West to 17th Avenue West, and excavate for widening the creek from 17th Avenue West to 21st Avenue West. Also, widen seawall from 1st Avenue West to 30th Avenue West, and widen with trapezoidal channel from 30th Avenue West to near Cortez Road.

Rationale

To accommodate expanded peak stream flow capacity, better accommodate heavy rainfall events and limit flood occurrences.

Project Title: Governor Ron DeSantis Park Flood Mitigation
Department: Public Works
Project Mgr: Tom Yarger
Infra. Sales Tax: -
Project #: PJ6042402 **Status:** Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes Project Need: Deficiency

Project Location

District 4 7510 Prospect Road, 34243

Description and Scope

This would consist of excavation of approximately 10,000 cubic yards (6.25 acre-feet) of material to create flood mitigation storage. This excavation could occur either in open space in the western portion of the park or the northern wetland (Wetland "A"). Excavation of Wetland "A" would improve the viability of this wetland by lowering grade to the determined seasonal high water table of the drainage ditch along the northern boundary of the park. This project will also enhance of both wetlands on the park property (Wetlands "A" and "B") by the removal of exotic and nuisance vegetation and planting of native vegetation. To improve regional water quality in the Pearce Drain/Gap Creek Watershed, a Nutrient Baffle Box would be installed in the drainage system downstream of the culvert crossing on Prospect Road.

Rationale

This project will further utilize the park property to provide regional flood storage and additional water quality treatment within Pearce Drain/Gap Creek Watershed. This watershed has historically experienced flood inundation to the roadway thoroughfare system, including Tallevast Road, Whitfield Avenue, Prospect Road, and 39th Street East, and residential and industrial properties. In addition to the flood and water quality improvements, this project with include enhancement of the existing wetlands located within the park property by the removal of exotic and nuisance vegetation and planting of native vegetation to improve the viability of these wetlands.

Category: Stormwater **Subcategory:** -
Project Title: Rio Mar at Sarasota Automated Outfall Structures
Department: Public Works
Project Mgr: Kenneth Kohn
Infra. Sales Tax: Yes
Project #: PJ6068362 **Status:** Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes Project Need: Deficiency

Project Location

District 4 6747 Prospect Road, Sarasota 34243 (Manatee County)

Description and Scope

Evaluate and install three (3) Automated Outfall Structures (AOS) to create additional flood storage for this watershed. Location of AOSs to based upon accessibility to public right-of-way. Provide a drainage easement(s) over the stormwater facilities for permitting, construction, inspection, and maintenance of the AOS, supporting communications, and water quality monitoring equipment, as required. Additionally, install an outfall pipe underneath Prospect Road to a lateral drainage ditch ultimately flowing into Pearce Drain.

Rationale

Pearce Drain Watershed has a history of overtopping its banks and inundation of adjacent properties and roadway thoroughfares. A majority of the homes within Centre Lake Subdivision had flood claims due to the "No Name" flood event of August 2017. The Pearce Drain Watershed Management Plan (WMP) found a deficit in flood storage is causing the inundation of adjacent properties along Pearce Drain. The subsequent Pearce Drain Feasibility Study (Study) determined additional flood storage could be created by lowering the design normal water level of the existing stormwater facilities prior to a forecasted flood event utilizing Automated Outfall Structures (AOS). The Study found that 38.72 to 48.56 acre-feet of additional flood storage could be created, depending upon the drawdown timeframe, from installing AOS at this stormwater facility. The AOS may also be utilized to release treated runoff to optimize water quality treatment from these stormwater facilities and help meet national and state mandates to protect receiving waters in the Tampa Bay watershed.

Project Title: Polynesian Village Discharge to Pittsburg Drain
Department: Public Works
Project Mgr: Wen DeSue
Infra. Sales Tax: -
Project #: PJ6096000 **Status:** Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: - Project Need: Deficiency

Project Location

District 4 Molokai Dr between 5th St W and the Pittsburg Canal, Bradenton

Description and Scope

This project will replace a highly deteriorated 66 inches metal pipe between 5th St W and the Pittsburgh drain between Molokai Dr and 65th Ave W.

Rationale

This project is for the replacement of a failing storm water pipe south of Molokai Dr. between 5th St W and the Pittsburg Canal. This 66 inch pipe is the outfall point for areas east of US 41/ 14th ST W , south of 63rd Ave W, and north of Bowlees Creek. This metal pipe is well past its typical 30 year lifespan, and holes are developing along the entire section of pipe that require annual repairs. If not replaced a full pipe collapse could occur and cause the potential for extensive flooding in the surrounding areas. Replacing with concrete storm drain will not only increase the systems useful life to approximately 50 years or more, the change from corrugated metal to smooth walled concrete makes the drainage system more efficient.

Project Title: Hawthorne Park Sediment Basin Installation
Department: Public Works
Project Mgr: Al Neumann
Infra. Sales Tax: -
Project #: PJ6096800 **Status:** Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: - Project Need: Deficiency

Project Location

District 3 Hawthorn Park, Bradenton

Description and Scope

The designed capture structure will make a location that captures the material before it gets to the open ditch and the cross pipe. While the structure will require frequent cleaning, the net annual amount of effort will still be less. The capture structure will be cleaned easily with existing equipment.

Rationale

The purpose of this project is to proactively capture sediment that continually comes through this open drainage system. Crews must annually clean the ditch and pipe crossing just down stream of this location because of the large rate of deposition. The designed capture structure will make a location that captures the material before it gets to the open ditch and the cross pipe. The capture structure will be cleaned easily with existing equipment.

Project Title: Mockingbird Hill/Samoset Canal Improvements at 27th St E/34th Ave. E
Department: Public Works
Project Mgr: Al Neumann
Infra. Sales Tax: -
Project #: PJ6101900 **Status:** Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: - Project Need: Deficiency

Project Location

District 2 27th St E at the Mockingbird Hill canal, Bradenton

Description and Scope

This project will design and construct a conveyance system to transport storm water under 27th ST E. This will replace an existing system that has been put together in pieces and parts over the last 40 years of development.

Rationale

Mockingbird Hill canal culvert crossing rehab. This is the location of the Mockingbird Hill canal where it must cross 27th ST E. The way it crosses is very in efficient because it is not a direct path for the water to flow. The canal is offset by over 200 feet from the west to east side of the road. During this distance the water must make two 90 degree turns and pass through several structures. The City of Bradenton watershed study showed the water to back up over two feet from east to west because of this situation. This project will design a more efficient conveyance process at this location.

Project #: PJ6106300 **Status:** Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: - Project Need: Deficiency

Project Location

District 4 Bowlees Creek, Bradenton

Description and Scope

Design and construction. Removal of two weirs. Addition of automated weirs in Bowlees Creek and extend reclaimed water to Sara Bay Golf Course. Addition of nutrient baffle box for water quality treatment. Dredging portions of Bowlees Creek.

Rationale

Bowlees Creek is a flood prone watershed. A Watershed Study and Flood Mitigation Alternatives Analysis is underway through the cooperative agreement with the SWFWMD. This study identified flood mitigation alternatives which included this project for flood reduction. This flood mitigation alternative was identified at the work session held October 31, 2019 to the BOCC.

Project Location

District 4 9th St E, Bradenton

Description and Scope

Design and construction. Construction of dual 48 inch pipes from the main storm sewer trunkline on Pennsylvania Avenue west 2660 feet to the Pittsburgh Drain.

Rationale

This project is to lower flood stages in Meadors Subdivision and Pennsylvania Avenue area. This project will lower the flood stages and remove 9 of 18 structures from the 100 year 24 hour floodplain. This will be accomplished with construction of dual 48 inch pipes from the main stormsewer trunkline on Pennsylvania Avenue west 2660 feet to the Pittsburgh Drain.

Bowlees Creek is a flood prone watershed. A Watershed Study and Flood Mitigation Alternatives Analysis is underway through the cooperative agreement with the SWFWMD. This study identified flood mitigation alternatives which included this project for flood reduction.

Project Title: Lakewood Ranch Park Drainage Improvements
Department: Sports and Leisure Services
Project Mgr: Tom Yarger
Infra. Sales Tax: -
Project #: PJ6108400 **Status:** Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: - Project Need: Maintenance

Project Location

District 5 5350 Lakewood Ranch Blvd, Bradenton

Description and Scope

Improve drainage of the soccer, football, softball, T-Ball, Little League fields and playground. Complete parking lots.

Rationale

The funding will complete the four-phased project to address the ongoing drainage issue effecting all youth play along the north side of Lakewood Ranch Park and provide adequate parking for all attendees. Over the past 15 years, Lakewood Ranch Park users have experienced multiple field closures due to rain, often causing fields to be closed for multiple days, even weeks. With East County seeing a substantial growth in families moving in, the ability to relocate leagues to "open" fields is no longer a option and the voices of frustration have begun to increase.

As a result, we are seeking the funds needed for public works to address the drainage issues, prevent water from sitting on the fields for extended periods of time and pave the projected parking lots (football, softball and playground).

Project #: PJ6113060 **Status:** Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: - Project Need: Maintenance

Project Location

District 4 Woods of Whitfield, Bradenton

Description and Scope

This project encompasses design, permitting, surveying and installation of cure in place lining rehabilitation and/ or full replacement of pipes of various sizes on multiple streets in the Woods of Whitfield community.

Rationale

This community has corrugated metal and pebble rock drainage pipe that has surpassed its lifespan and is starting to fail. When these pipe lines fail either by collapsing or rotting through, stormwater conveyance is compromised causing street and property flooding to occur.

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: - Project Need: Maintenance

Project Location

District 3 Cortez Village - Sunny Shores, Bradenton

Description and Scope

This project encompasses design, permitting, and installation of stormwater drainage infrastructure or rehabilitation of pipes of various sizes on ten streets in the Cortez Village community and eleven streets in the Sunny Shores Community.

Rationale

These two communities have drainage infrastructure that is extremely old and is plagued by chronic failures. There are numerous sections of small diameter clay and non reinforced drainage pipe that continuously collapse and causes street flooding. Both communities stormwater conveyance systems are easily overwhelmed and could benefit from redesign, pipe upsizing, and some pipe rehab. The pipe upsizing would need property acquisition and engineering involvement and is outside the scope of regular maintenance.

District 2 US-301 to 27th, Bradenton

Description and Scope

Design and construction. Construction of 5 acre-ft of flood mitigation pond and approximately 500 ft of additional conveyances (48 inch RCP) to increase conveyance capability of existing system in Sugarhouse Creek and lower flood stages up to the 100 year 24 hour storm event.

Rationale

This project is to lower flood stages in Sugarhouse Creek from US-301 to 27th for up to the 100 year 24 hour storm event (LaSalva Park Area). This will be accomplished with widening of existing conveyances on 27th and the existing conveyance west of 27th to U.S. 301. In addition, flood mitigation pond will be provided.

Project #: PJ6114400 **Status:** Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: - Project Need: Deficiency

Project Location

District 2 15th St to Sugar Creek, Bradenton

Description and Scope

Design and construction. Construction of a 20 ac-ft flood mitigation pond on east side of 15th, additional dual 100 L.F. of 48 inch RCP at 15th and additional equivalent 7 ft RCP (approx. 100 L.F. at 27th), and additional equivalent 7 ft RCP in Sugar Creek Resort.

Rationale

This project is to lower flood stages in Glenn Creek from the Tropicana Area on 15th to Sugar Creek Resort. This project will lower the flood stages in this system up to the 100 year 24 hour storm event. This will be accomplished with widening of existing conveyances on 15th, 27th, and within the Sugar Creek Resort area and will also include a flood mitigation pond.

Status: Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: -
Project Need: Deficiency

Project Location

District 4 5511 39th St E, Bradenton

Description and Scope

This project provides the funding and services need to purchase the additional land needed to construct a new administration building at the 5511 39th ST E facility. The land in question is the 3 acres directly to the north of the facility that is currently undeveloped. It will provide a proper location for the administration building in the long term and allow the construction to proceed while the crew still occupies the existing building.

Rationale

This small addition of land to the already established and accepted neighborhood yard is much more desirable and economical compared to searching for a new site to locate the entire operation. The surrounding neighborhoods were built with this facility in place and have accepted its operation as the norm for the area.

Project #: PJ6117401 **Status:** Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: - Project Need: Deficiency

Project Location

District 4 5511 39th St E, Bradenton

Description and Scope

This provides funding for design and construction of a new administration building at the 5511 39th ST E, Stormwater Operations facility. The current building does not provide enough space for the 50+ employees working from this location. It was originally intended for roughly 30 employees. The structure is also antiquated and not storm ready. This facility is one of the main dispatch points of our rapid response teams during weather emergencies. The teams cannot stay at this location due to the unsturdy nature of the facility and must stay at another location, then return to the yard for their equipment to respond following events.

Rationale

This project will provide a building sufficient for the Stormwater Operations crew for the next 20+ years. It will also add another County facility that can be occupied during weather events so crews are available the fastest response possible.

Department: Public Works
Project Mgr: Jeff Anthony
Infra. Sales Tax: -
Project #: PJ6117600 **Status:** Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: - Project Need: Maintenance

Project Location

District 4 Bayshore Gardens, Bradenton

Description and Scope

This project encompasses design, permitting, and installation of cure in place lining rehabilitation and/ or full replacement of pipes of various sizes on eleven streets in the Bayshore Gardens community and/or the select addition of inlets in problem areas.

Rationale

This community has corrugated metal drainage pipe that has surpassed its lifespan and is starting to fail. When these pipe lines fail either by collapsing or rotting through stormwater conveyance is compromised causing street and property flooding to occur.

Project #: PJ6117601
Status: Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: -
Project Need: Deficiency

Project Location

District 4 Florida Blvd, Bradenton

Description and Scope

Design and Construction. Stormwater improvements include installation of additional inlets to collect runoff and upsizing pipelines within streets and in the vicinity of the marina, Florida Boulevard, American Way, Canada Boulevard, Bay Drive, and Canal Way.

Rationale

This project is to improve local street flooding and flooding of the Trailer Estates area. County requires roadways to be designed to the 10 year 24 hour storm event. The existing drainage system does not meet County requirements for the 10 year storm resulting in high water (overtopping of crown of road) at various locations.

Project Title: Pearce Drain Innovative Water Quality Technology Testing
Department: Public Works
Project Mgr: Kenneth Kohn
Infra. Sales Tax: -
Project #: PJ6118600 **Status:** Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes Project Need: Deficiency

Project Location

District 4 8414 35th Lane East, Campus Cove, Alumni Trail, Sarasota

Description and Scope

This project will consist of the installation of a Nutrient Baffle Box and Automated Outfall Structures within University Village and/or Grady Point Subdivision for the purpose of sampling and testing the pollutant loading with existing stormwater facilities and subsequent removal efficiency of pollutants downstream in the receiving waterbody of Pearce Drain. The water quality sampling and testing will determine the effectiveness of pollutant removal of both systems, such as the removal of suspended solids including organic and inorganic debris, nutrients (nitrogen and phosphorous), and other pollutants such as oils and grease. The Automated Outfall Structure would be utilized to release treated runoff through the residence period within the stormwater facility and created additional water quality treatment volume before a successive rain event.

Rationale

Under the County NPDES MS4 permit, the County is required address nutrient impairment of its waterways and to take proactive measures to reduce pollutant loading. To address this regulatory requirement, this project will evaluate water quality treatment removal using innovative technologies including Automated Outfall Structures (AOS) and Nutrient Baffle Boxes (NBB) to determine their respective pollutant load reduction and cost effectiveness.

Project #: PJ6119600
Status: Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: No
Project Need: Growth, Deficiency

Project Location

District 1 Jim Davis at Golf Course Road, Parrish

Description and Scope

Acquire approximately 95 acres of land from owner of Parcel Identification Numbers: 495800005, 497900001,496600008, 496400003, 494920059 and 496200007 for future County improvements and use.

Rationale

There is approximately 95 acres of land north of Golf Course Road in the vicinity of Gamble Creek that is available for purchase. The purchase of this land would facilitate multiple
beneficial improvements and uses including Golf Course Road widening or reconstruction, the needed bridge replacement over Gamble Creek (~2.5 acres), wetland and flood plain mitigation (~10.5 acres), storm water ponds, additional flood plain storage for the basin (~38 acres), and public preserve use (~44 acres). Golf Course Road is a planned two-lane throughfare and the County is evaluating the need for four lanes in this area.

Project #: PJST01957 **Status:** Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: - Project Need: Deficiency

Project Location

District 4 Lockwood Ridge - Honore, Bradenton

Description and Scope

Design and construction. This project will lower the flood stages for communities along Rattlesnake Slough in the immediate area between Lockwood Ridge Road and the crossing at Honore Avenue. This will be accomplished with construction of a 50 ac-ft flood mitigation pond.

Rationale

This project is to lower flood stages in Rattlesnake Slough for up to the 100 year 24 hour storm event. This will be accomplished with construction of 50 ac-ft of pond storage (flood mitigation) located between Lockwood Ridge Road and the crossing at Honore Avenue.

Rattlesnake Slough is a flood prone watershed. A Watershed Study has been completed for this area and flood reduction can be realized with additional storage provided by this project.

Infra. Sales Tax: -
Project #: PJTP25018 **Status:** Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes Project Need: Deficiency

Project Location

District 1 Erie Road, Parrish

Description and Scope

This project will include survey and mapping, drainage easement dedications, and flowline improvements of Cedar Drain (approximately 2.70 miles) between the headwaters within Ancient Oaks Subdivision to the ultimate outfall of Buffalo Canal.

Rationale

A large section of this drainage system runs through private property with no defined access. Cedar Drain serves as the outfall conveyance system for the communities of Ancient Oaks, Thousand Oaks, Woodlawn Lakes, Oakleaf Hammock, Old Mill Preserve and Sheffield Glen. Given the history of flooding that occurs within Thousand Oaks and Woodlawn Lakes, staff recommends taking steps to fully maintain this system (including vegetation removal, establishment of access easements, flowline improvements such as widening/ sediment removal/channel straightening, and culvert upsizing) in an effort to improve overall drainage conveyance and lessen the impacts of future street and property flooding.

Project Title: Palm Aire Stormwater Pipe Replacement and Rehabilitation
Department: Public Works
Project Mgr: Jeff Streitmatter
Infra. Sales Tax: -
Project #: PJTP25019 **Status:** Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: - Project Need: Maintenance

Project Location

District 4 Whitfield Ave at University Pkwy, Sarasota

Description and Scope

Design, permit, construct/install stormwater drainage infrastructure or complete the rehabilitation of existing stormwater pipes (varies sizes) within the Palm Aire Community.

Rationale

There are numerous sections of corrugated metal pipe that continuously collapse and cause street flooding. The existing stormwater conveyance systems are easily overwhelmed and could benefit from redesign, pipe upsizing, and/or pipe rehabilitation. The pipe upsizing will require engineering design and property acquisition thus is outside the scope of regular maintenance.

Capital Improvement Plan
FY2026 - FY2030

Category: Stormwater
Subcategory: -
Project Title: Sylvan Oaks Stormwater Improvement
Department: Public Works
Project Mgr: Jeff Streitmatter
Infra. Sales Tax: -
Project #: PJTP25022
Status: Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes
Project Need: Deficiency

Project Location

District 2 604 6th ST E, Palmetto

Description and Scope

Design, permit, and construct raised internal streets to create additional freeboard above the apparent high-water stages with associated adjustments to existing stormwater structures (e.g., curb inlets and junction boxes) and utility infrastructure.

Rationale

The intent of the project is to elevate the local streets within Sylvan Oaks subdivision to lessen the impact of flood inundation within the community. This project should be considered conceptual until the North County Watershed Management Plan (WMP), which includes this general area, is scheduled to be completed December 31, 2024. The proposed budget includes consideration for both stormwater and utility infrastructure adjustments.

Category: Stormwater **Subcategory:** -
Project Title: Wade Canal Channel Improvements
Department: Public Works
Project Mgr: Jeff Streitmatter
Infra. Sales Tax: -
Project #: PJTP25023 **Status:** Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes Project Need: Deficiency

Project Location

District 1 Fort Hamer Road, Parrish

Description and Scope

This project will include survey and mapping, drainage easement dedications, and flowline improvements of Wade Canal (approximately 6.09 miles) between the headwaters east of Fort Hamer Road to the ultimate outfall of Buffalo Canal.

Rationale

A large section of this drainage system runs through private property with no defined access. Wade Canal serves as the outfall conveyance system for the communities of Harrison Ranch, Lexington, and Willow Bend. Given the history of flooding that occurs within this drainage system, staff recommends taking steps to fully maintain this system (including vegetation removal, establishment of access easements, flowline improvements such as widening/sediment removal/channel straightening, and culvert upsizing) in an effort to improve overall drainage conveyance and lessen the impacts of future street and property flooding.

MANATEE COUNTY GOVERNMENT
Capital Improvement Plan
FY2026 - FY2030

Category: Wastewater **Subcategory:** Wastewater Collections
Project Title: FM Pipe for Redirection of Flow from Colony Cove 6 LS (RTU 522)
Department: Utilities
Project Mgr: Albert Rosenstein
Infra. Sales Tax: -
Project #: PJ6005687 **Status:** Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: - Project Need: Growth, Deficiency

Project Location

District 1 162 Colony Drive North, Ellenton

Description and Scope

Installation of new 160 LF of 10-inch discharge pipe from Colony Cove 6 (CC6) (RTU 522), Lift Station (LS) to connect to the existing 10-inch pipe along Colony Drive N. (where flow will be reversed). This includes disconnection of CC6 from the force main along US301 (could maintain the pipeline with a closed valve in order to have backup redundancy). Install 1,620 LF of LS CC10 discharge force main along Desoto Drive from LS CC10 (RTU 526) to the manhole upstream of LS N1-C. New 12-inch pipe alignment. Install 2,033 LF of new 10-inch pipe through the development to route flows from Lift Stations CC6, CC8, and Tierra Siesta 1 to the new 12-inch discharge of LS CC10 (and ultimately discharge into LS N1-C). Abandonment of the existing 8-inch discharge of CC10 (which is too small to be reused in reverse flow direction).

Rationale

This project is recommended by the 2023 North Wastewater Collection System Master Plan (NC-201 & NC-202) which calls for the correction of these conditions prior to FY29. This project is designed to correct the wet weather high flow hydraulic overloading on the Tidevue force main by lowering the head pressure condition in the Tidevue force main. The "N1C Upgrade to a MLS & Reroute Tidevue FM Flows to N1C Gravity Main" project must run parallel to this project.

Project Location

District 4 Canada Blvd, Bradenton

Description and Scope

The installation of new gravity sewer mains, laterals, and reconnection to homes. All Design will be funded in FY25. The construction phasing will use a master design that is currently being developed at Project Management. From a master gravity sewer construction design awards will be broken into five (5) phases of construction. The first construction phase would start in FY25 and the last construction phase start in FY29. This will complete the total replacement of Trailer Estates.

Rationale

From the Trailer Estates Inflow and Infiltration (I&I) Final Report Summary, it was recommended to replace the aging sewer system from the rear easements to the front roadway. The current system is experiencing a high infiltration rate.

Project #: PJ6045381 **Status:** Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: - Project Need: Maintenance

Project Location

District 4 Southwest Service Area, Bradenton

Description and Scope

Replace approximately 765 linear feet (LF) of 4- and 6-inch force main from the flange inside the valve vault at Lift Station 15-A (RTU 402) with new 6-inch pipe and approximately 1,295 LF of 3-inch force main at Palm Aire 6 Lift Station (RTU 446) with new 4-inch pipe. Install a p-trap (dip in the Force Main) and connect to the existing manhole. Includes lining of receiving manhole and the first two downstream manholes for each force main. Grout, fill, and abandon in place the old force main.

Rationale

Replace due to age as recommended in Project Packages 6E and 7C in the Force Main and Valve Asset Management Plan (2014).

Project #: PJ6089784
Status: Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: -
Project Need: Maintenance

Project Location

Multi-district North Service Area, Bradenton

Description and Scope

Inspect and replace or rehabilitate as required +/- 15,257 LF gravity sewer main, 68 manholes, 123 sewer laterals. Project includes +/- 1,321 LF of 6" pipe, +/- 13,366 LF of 8" pipe, and +/- 570 LF of 10" pipe.

Rationale

Recommendation from Manatee County Gravity Collection System Desktop Evaluation, Repair and Rehabilitation (R&R) Prioritization, and Asset Management Plan" (2020), Section 7.2: Priority Group No. 2, Project Package 2-F (Appendix B). Many of these pipelines and infrastructure are past their useful life. Additionally, many of these pipelines are located adjacent to environmentally sensitive areas. Failure to this sewer system could impact the bay and the County could face fines from Florida Department Environmental Protection (FDEP). Also these proactive actions will reduce inflow & infiltration (I & I) into the system reducing the potential sewer spills. This could also potentially reduce the treatment cost at the North Regional Water Reclamation Facility (NRWRF).

Project Title: Lift Station 6A and 7A Force Main Replacements and Lift Station 6A Wetwell Expansion
Department: Public Works Projects
Project Mgr: Albert Rosenstein
Infra. Sales Tax: -
Project #: PJ6097881 **Status:** Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes Project Need: Growth, Deficiency

Project Location

District 4 7678 W Moreland Dr to 8448 Uplands Blvd, Bradenton

Description and Scope

Replace Lift Station 7A (RTU 137) force main (approximately 1,615 linear feet (LF) of 6-inch force main replaced with 8-inch) and Lift Station 6A (RTU 136) force main (approximately 1,900 LF of 8-inch pipe with 12-inch). Remove existing wetwell and install an upsized wetwell at Lift Station 6A, proper size to be determined by the EOR on this project based on storage capacity requirements. Includes lining of receiving manhole and the first two downstream manholes for each force main.

Rationale

The force main upsize at Lift Station 7A is to accommodate additional flows from the USF/Airport areas and prevent high velocities in the force main. The upsize at Lift Station 6A is to prevent high velocities in the force main and prevent surcharging in the upstream gravity system. Recommended Projects SW-5 and SW-6 from the Southwest Wastewater Collection System Master Plan Update (2016). The current Lift Station 6A does not meet the required wetwell capacity (approximately 4 times the pumping capacity).

Project Title: I-75 Parallel Force Main
Department: Public Works Projects
Project Mgr: Marcenel Joseph
Infra. Sales Tax: -
Project #: PJ6097980
Status: Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: -
Project Need: Deficiency

Project Location

District 5 7477 41 St Ave E to Under I-75, Bradenton

Description and Scope

Project includes installing approximately 670 linear feet of 20 inch diameter force main downstream of 428 Booster Station (RTU 666), under I-75, where a hydraulic bottleneck exists. Also, due to the size of the force main and extensive depth needing to drill under the interstate the design calls for a switch from the directional drill method to jack and bore method of installation of the force main.

Rationale

To correct existing capacity deficiency. Recommended Project SE-5 from the Southeast Wastewater Collection System Master Plan Update (2017) and to coordinate with Florida Department of Transportation (FDOT) project timing.

Project #: PJ6101080
Status: Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: -
Project Need: Maintenance

Project Location

District 3 8720 44th Ave W, Bradenton

Description and Scope

Evaluate the MLS-203 (1-M) collection system basin for infiltration and inflow. Design and construct a sequence of improvements to decrease infiltration and inflow occurring within this system. First phase should include a chloride monitoring study to narrow the areas to receive rehabilitation. Project should include cleaning and inspections of sewer system including laterals, mainlines, and manholes to provide cost estimates, recommendations for improvements, and scope required to complete the work.

Rationale

The 1-M mini-basin (the gravity area that flows directly to MLS 1-M) was one of the highest ranked priority areas for infiltration rehabilitation per the Engineer of Record's Inflow and Infiltration Study Report. Main line gravity pipes, manholes and laterals will be evaluated.

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: - Project Need: Maintenance

Project Location

Multi-district 2301 Ave C to 2819 Ave C, Bradenton Beach and Manatee Woods, Bradenton

Description and Scope

Evaluate the following collection system basins for infiltration and inflow: Manatee Woods Lift Station (RTU 319), Lift Station 3-C (RTU 058), and Lift Station 2-C (RTU 057). Design and construct a sequence of improvements to decrease infiltration and inflow occurring within these collection system basins. First phase should include a chloride monitoring study for Lift Station 2-C and inspections including smoke testing for Manatee Woods and Lift Station 3-C to narrow the areas to receive rehabilitation. Project includes cleaning and inspections of sewer system including laterals, mainlines, and manholes to provide cost estimates, recommendations for improvements, and scope required to complete the work. Project also includes design of improvements, preparation of bid documents, and services during construction.

Rationale

The Manatee Woods lift station, Lift Station 2-C, and Lift Station 3-C were identified as high priority areas for rehabilitation in the County's Inflow and Infiltration Study. Improvements will decrease inflow and infiltration to the collection system and treatment plant.

Project #: PJ6104271
Status: Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: -
Project Need: Maintenance

Project Location

District 3 Harbor Road and 6th Ave NW, Bradenton

Description and Scope

Replace Approximately 2,302 Linear Feet (LF) of existing 4" force main pumping from Lift Station #232, running along Harbor Road and 6th Ave NW, and connecting to an 8" force main along 59th street NW.

Rationale

Replacement due to age (installed in approximately 1976) as recommended in Project Packages 3A through 3E in the 'Force Main and Valve Asset Management Plan (2014)'. This portion of 2,302 linear feet (LF) was originally planned as part of the CIP Project #6089781-Southwest Area D Force main Replacement. The location of this project is also adjacent to the Harbor Hills Waterline Replacement Project # 6104270 which includes water main replacement along Harbor Road as well. For planning and construction purposes it is practical to run the water main replacement project and this portion of force main replacement project concurrently.

Category: Wastewater **Subcategory:** Wastewater Collections
Project Title: South Bradenton Beach Gravity System Relocation
Department: Utilities
Project Mgr: Albert Rosenstein
Infra. Sales Tax: -
Project #: PJ6105280 **Status:** Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: - Project Need: Deficiency

Project Location

District 3 6th St S to just south of 13th St S, Bradenton Beach

Description and Scope

Relocate a portion of the gravity collection system in South Bradenton Beach to new locations located within public right-of-way. Install approximately 2,400 linear feet of 10-inch and 2,628 linear feet of 8-inch gravity main and approximately 21 manholes. Install approximately 100 new 6-inch lateral with connections. Remove existing gravity pipelines. Provide paving repair and road restoration.

Rationale

The current County-owned gravity collection system is on private property including portions through homeowner yards. Project will relocate areas of this neighborhood gravity collection system to be within the street right-of-way.

Category: Wastewater
Subcategory: Wastewater Collections
Project Title: Tidevue Inflow and Infiltration Improvements
Department: Public Works Projects
Project Mgr: Zachary Tarifa
Infra. Sales Tax: -
Project #: PJ6110281
Status: Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: -
Project Need: Maintenance

Project Location

Multi-district 1355 41st Ave E, Ellenton

Description and Scope

Evaluate the Tidevue Estates portion of the Tidevue Master Lift Station collection system basin for infiltration and inflow (I&I), including an I&I study with potential flow monitoring, smoke testing, and closed-circuit television (CCTV). This includes the gravity collection system within Tidevue Estates upstream of lift station RTU 503. Design and construct a sequence of improvements to decrease infiltration and inflow occurring within these collection system basins. Project to include cleaning and inspections of sewer system including laterals, mainlines, and manholes, recommendations for improvements, and scope of the recommended improvements. Project also includes design of improvements, preparation of bid documents, and services during construction.

Rationale

The Tidevue Master Lift Station service area has been identified by County staff to have high inflow and/or infiltration. This project will include an I&I study evaluation to determine the locations of high I&I and subsequent improvements in the most problematic areas identified in the study.

Project Title: Nancy Gamble Lane Force Main Extension
Department: Utilities
Project Mgr: Eddy Zappacosta
Infra. Sales Tax: -
Project #: PJ6112880
Status: Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: -
Project Need: Deficiency

Project Location

District 3 1112 Nancy Gamble Lane

Description and Scope

Install approximately 950' of 4'' force main pipe from existing discharge manhole GIS#18377 to existing manhole GIS#3748. . Right now the existing force main discharges into manhole #18377. This project will divert discharge into manhole # 3748.

Rationale

The County has identified this area as having high infiltration and inflow (I&I) during wet weather events. This new force main will redirect the point of discharge to prevent future overflowing of Lift Station #538 during high wet weather events causing Sanitary Sewer Overflow (SSO's). Smoke testing identified defects in a privately owned sewer system that contributes to inflow of the County sewer system. This project will eliminate the already full capacity of the small sewer system and divert the flow into a larger capacity system down stream.

Project Title: Lift Station 706 Force Main Reroute
Department: Public Works
Project Mgr: Jeff Streitmatter
Infra. Sales Tax: -
Project #: PJ6119580
Status: Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: -
Project Need: Deficiency

Project Location

District 1 635 172nd Ct E, Bradenton 34212

Description and Scope

Design, permit, construct, and project management the installation of a 4-inch force main and a 8-inch gravity sewer with at least one manhole, approximately 1,110 feet along 7th Ave E, from Lift Station No. 706 to the existing gravity sewer network locating in the Rye Wilderness Estate subdivision.

Rationale

Lift Station No. 706, located in the Hillwood subdivision off of Waterline Rd, is experiencing issues due to the current configuration of flows in the wastewater collection system which is causing maintenance issues. Staff recommends rerouting flows from Lift Station No. 706 via a force main to the nearby gravity sewer network to more efficiently operate the County's wastewater system.

Category: Wastewater
Subcategory: Wastewater Collections
Project Title: Lift Station 9-A Force Main Extension
Department: Utilities
Project Mgr: Jeff Streitmatter
Infra. Sales Tax: -
Project #: PJTP26014
Status: Requested

Comprehensive Plan Information

CIE Project: No
LOS/Concurrency: No
Project Need: Growth

Project Location

District 4
902 Whitfield Ave. Bradenton

Description and Scope

Extend the 12-inch Lift Station 9-A force main from manhole (#14825) located at the intersection of Whitfield Avenue and Persimmon Place to the king manhole wet well of LS 14-A (RTU #434), approximately 1,250 feet. Install a p-trap (dip in the Force Main) and connect to the existing manhole. Line the inside of the king manhole (#12208). Upgrade the existing approximately 20 Linear Feet of gravity main from king manhole to the wet well from 18-inch to 20-inch.

Rationale

The 9-A Force Main Extension will reroute increasing flows coming from the south along 15th Street E. away from the gravity infrastructure upstream of Lift Station 14-A and equalize the peak flows, thus allowing the pumps to operate within capacity. This project is necessitated by anticipated growth at the Airport Industrial Park (RTU #469), Airport Commercial Park (RTU #491), and Centre Park (RTU #298) Lift Stations. This project is recommended in the 2023 South West Wastewater Collection System Master Plan.

Project Title: 69th Street Parallel Force Main Extension to NRWRF Headworks
Department: Utilities
Project Mgr: Jeff Streitmatter
Infra. Sales Tax: -
Project #: PJTP26016 **Status:** Requested

Comprehensive Plan Information

CIE Project: No
LOS/Concurrency: No Project Need: Growth

Project Location

District 1 8100 69th Street East, Palmetto

Description and Scope

Disconnect the existing 12-inch force main alignment that was constructed along 69th Street. Extend the 12-inch FM alignment to the North Regional Water Reclamation Facility (NRWRF) headworks using 6,450 feet of 16-inch diameter pipe to hydraulically disconnect the new alignment from the original 16-inch pipe on 69th Street and the 20-inch pipe from Lift Station N1-C from the south. Add two additional valves for existing 16 inch pipe to isolate in both directions.

Rationale

This project will allow separation of lift stations that need to discharge higher range/peak flows (at higher heads, using their VFDs) from the smaller lift stations that can pump to standard heads only. Recommended in the 2023 North Wastewater Master Plan.

FY2026 - FY2030

Category: Wastewater **Subcategory:** Wastewater Collections
Project Title: Redirect Heron Creek Lift Station (RTU 862) Flows
Department: Utilities
Project Mgr: Jeff Streitmatter
Infra. Sales Tax: -
Project #: PJTP26017 **Status:** Requested

Comprehensive Plan Information

CIE Project: No
LOS/Concurrency: No Project Need: Maintenance

Project Location

District 1 7511 36th Ave. East, Palmetto

Description and Scope

Disconnect the 10-inch Heron Creek force main on 36th Avenue East (Ellenton Gillette Road) from the 16-inch N1B force main on 69th Street East and redirect to the 10-inch gravity sewer stub-out at the northwest corner of 69th & 36th. The gravity stub will be connected to a new polymer manhole and the next two downstream manholes will be lined. Upgrade the Heron Creek Lift Station (RTU #862) discharging piping, existing 4-inch force main to 6-inch force main, and/or pumps for Heron Creek as necessary to accommodate the new head conditions experienced by the station.

Rationale

The Heron Creek Lift Station (RTU #862) experiences operational difficulties due to high force main pressures caused by the N1B Master Lift Station. This project will disconnect the Heron Creek Lift Station from the N1B force main and then connect to the gravity sewer system that flows to N1B. The new lower head conditions will allow for optimal operation of the Heron Creek Lift Station.

Project #: PJTP26018 **Status:** Requested

Comprehensive Plan Information

CIE Project: No
LOS/Concurrency: No Project Need: Deficiency

Project Location

District 1 7200 69th Street East , Palmetto

Description and Scope

Disconnect discharge 4-inch force main of Mills Elementary School Lift Station (RTU #801) and Buffalo Creek Lift Station (RTU 559) from the 16-inch force main and connect instead to the existing 12-inch force main. This is approximately 80 feet of 4-inch pipe. Grout, fill, and abandon in place the old force main.

Rationale

By Plan Development Build Out (PDBO), this alleviates the overflows at these stations as well as at Fairway Imperial Lift Station (RTU #583) and Imperial Lakes Lift Station (RTU #510). Recommended in the 2023 North Wastewater Collections System Master Plan.

Project Location

District 2 2889 16th Ave., Palmetto

Description and Scope

Upsizing of the existing 6-inch force main on 16th Avenue to 10-inch by replacing 2,870 feet of existing 6-inch force main with a new 10-inch force main (consistent with the new design flow for LS N7-A RTU #554) will be necessary by the time that the pumps at LS N7-A are upgraded. Replace from the first flange inside the valve vault at lift station and install a p-trap (dip in the Force Main) and connect to the existing manhole. Includes lining of receiving manhole and the first two downstream manholes for each force main. Grout fill and abandon in place the old force main.

Rationale

Upgrade in force main pipe size is needed due to growth, recommended in the 2023 North Wastewater Collections System Master Plan.

Project #: PJTP26020
Status: Requested

Comprehensive Plan Information

CIE Project: No
LOS/Concurrency: No
Project Need: Deficiency

Project Location

District 4
102 Molokai Drive, Bradenton

Description and Scope

Replace the 3-inch force main of Hawaiian Village lift station (RTU #403) with 8-inch-diameter pipe, approximately 200 feet. Install a p-trap (dip in the Force Main) and connect to the existing manhole. Line the inside of the manhole and the next two manholes downstream. Grout, fill, and abandon in place the old force main. Acquisition of easement for the force main is required.

Rationale

Upstream gravity surcharge shall be alleviated by replacing the 3-inch force main with 8-inch-diameter pipe. The 3-inch force main is currently creating a bottle neck. Recommended in the 2023 South West Wastewater Collection System Master Plan.

Multi-district North Service Area

Description and Scope

Conduct smoke testing within the Parrish, N1B, and Artisan Lake Master Lift Station (MLS) basins, including all upstream lift station basins. Based on reports from the smoke testing contractor, develop a bid package of necessary repairs for the identified defects and have them fixed.

Rationale

The County has identified the North Service Area has having high infiltration and inflow. Smoke testing identifies defects that contribute to inflow including broken clean-out caps, connections to storm drains, and manholes in need of an inflow dish to prevent stormwater from entering the sanitary sewer. This project will identify and remedy these defects within these master lift station basins, including all upstream lift station basins.

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: -
Project Need: Maintenance

Project Location

District 4 (Bayshore Gardens) Southwest Service Area, Bradenton

Description and Scope

Inspect and replace or rehabilitate as required +/- 60,691 linear feet (LF) gravity sewer main, 311 manholes, 690 sewer laterals. Project includes +/- 10 LF of 4" pipe, +/- 38 LF of 6" pipe, +/- 43,418 LF of 8" pipe, +/- 633 LF of 10" pipe, +/- 783 LF of 12" pipe, +/-11,706 LF of 16" pipe, and +/- 4,104 LF of 24" pipe.

Rationale

Recommendation from Manatee County Gravity Collection System Desktop Evaluation, Repair and Rehabilitate (R&R) Prioritization, and Asset Management Plan" (2020), Section 7.2: Priority Group No. 2, Project Package 2-B (Appendix B). Many of these pipelines and infrastructure are past their useful life. They are located adjacent to Sarasota Bay an environmentally sensitive area. Failure to this sewer system could impact the bay and the County could face fines from Florida Department of Environmental Protection (FDEP). Also these proactive actions will reduce inflow and infiltration (I & I) into the system reducing the potential sewer spills. This also will reduce the treatment cost at the Southwest Water Reclamation Facility (SWWRF).

Project Location

Multi-district Southeast and Southwest Service Areas, Bradenton

Description and Scope

Inspect and replace or rehabilitate as required +/- 15,337 LF gravity sewer main, 103 manholes and 139 laterals. Project includes +/- 40 LF of 6" pipe, +/- 1,375 LF of 8" pipe, +/- 92 LF of 10" pipe, +/- 11 LF of 12" pipe, +/- 8 LF of 16" pipe, and +/- 7 LF of 18" pipe.

Rationale

Recommendation from Manatee County Gravity Collection System Desktop Evaluation, Repair and Rehabilitation (R&R) Prioritization, and Asset Management Plan" (2020), Section 7.2: Priority Group Number 2, Project Packages 2-C and 2-E (Appendix B). Many of these pipelines and infrastructure are past their useful life. They are located on Anna Maria Island and in the Southeast (SE) Service Area. Failure to this sewer system could impact the bay and the County could face fines from the Florida Department Environmental Protection (FDEP). Also these proactive actions will reduce inflow and infiltration (I & I) into the system, reducing possible sewer spills and potentially reducing treatment costs at the Southwest and Southeast Regional Water Reclamation Facilities (SWWRF & SERWRF).

Project Title: 20A Force Main Replacement (RTU 433)
Department: Public Works Projects
Project Mgr: Jeff Streitmatter
Infra. Sales Tax: -
Project #: PJWW02144
Status: Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: -
Project Need: Maintenance

Project Location

District 2 5932 12th Street East, Bradenton

Description and Scope

Replace approximately 1,420 linear feet of 8-inch diameter pipe from the flange inside the valve vault at lift station RTU # 433 20A to the termination point at the existing manhole # 12614. Install a p-trap (dip in the Force Main) and connect to the existing manhole. Line the inside of the manhole and the next two manholes downstream. Grout, fill, and abandon in place the old force main.

Rationale

Recommendation in Package 8 from the Wastewater Force Main & Valve Asset Management program updated in 2020. The force main is at the end of its service life and is in need of replacement. The force main line replacement is necessary to maintain an operable utility system. If not replaced, the line is at risk of failing and causing a sanitary sewer overflow. Failure to this sewer system could impact the bay and the County could face fines from the Florida Department of Environmental Protection (FDEP).

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: -
Project Need: Maintenance

Project Location

District 2 5503 12th Street East, Bradenton

Description and Scope

Replace approximately 1,265 linear feet of 8-inch diameter pipe from the flange inside the valve vault at lift station RTU # 432 21A to the intersection of 57th Avenue East and 12th Street East. Reconnect to the existing PVC pipe at the intersection. Grout, fill, and abandon in place the old force main. Line the inside of the manhole and the next two manholes downstream.

Rationale

Recommendation from Package 7 of the Wastewater Force Main and Valve Asset Management program updated in 2020. The force main is at the end of its service life and is in need of replacement. The force main line replacement is necessary to maintain an operable utility system. If not replaced, the line is at risk of failing and causing a sanitary sewer overflow. Failure to this sewer system could impact the bay and the County could face fines from the Florida Department of Environmental Protection (FDEP).

District 3 1203 51st Ave Drive W., Bradenton

Description and Scope

Replace approximately 1,935 linear feet of 6-inch diameter pipe and approximately 500 linear feet of 8-inch diameter High-Density Polyethylene (HDPE) pipe subaqueous directional drill under Perico Bay (Total combined pipe replacement of approximately 2,435 linear feet) from the flange inside the valve vault at lift station RTU # 207 and manifolding into the termination point at Lift station RTU # 208. Grout fill and abandon in place the old force main. Approximately 75 linear feet of the 6-inch diameter pipe shall be installed by jack and bore. Includes lining of receiving manhole and the first two downstream manholes for each force main.

Rationale

Recommended from the Wastewater Force main and Valve Asset Management program updated in 2020. The force main is at the end of its service life and is in need of replacement. The force main line replacement is necessary to maintain a operable utility system. If not replaced the line is at risk of failing and causing a sanitary sewer overflow Failure to this sewer system could impact the bay and the County could face fines from the Florida Department of Environmental Protection (FDEP).

Project #: PJWW02167
Status: Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: -
Project Need: Maintenance

Project Location

Multi-district 8519 Whitfield Industrial Park and 2821 62nd Ave, Bradenton

Description and Scope

Replace approximately 2,335 linear feet of 4-inch diameter pipe (combined) from the flange inside the valve vault. RTU # 457 1,085 linear feet & RTU # 430 1,250 linear feet of 4-inch diameter pipe. Each force main will require a jack & bore: RTU # 457 approximately 100 LF under the Seminole Gulf Railway and RTU # 430 approximately 75 LF under 63rd Avenue East. RTU # 430 new force main will be installed down the roadway right of way along 628th St E or 29th St E (to be determined by design engineer), abandoning the easement the current force main is on. RTU #457 terminates in manhole # 16450; Install a p-trap (dip in the Force Main) and connect to the existing manhole. Line the inside of the manhole and the next two downstream. Grout fill and abandon both the old force mains in place.

Rationale

Recommendation from Package 9 of the Wastewater Force Main and Valve Asset Management program updated in 2020. The force main is at the end of its service life and is in need of replacement. The force main line replacement is necessary to maintain a operable utility system. If not replaced the line is at risk of failing and causing a sanitary sewer overflow Failure to this sewer system could impact the bay and the County could face fines from the Florida Department of Environmental Protection (FDEP).

Status: Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes
Project Need: Growth

Project Location

District 1 Erie Road from Fort Hamer Road to 69th St E - Parrish

Description and Scope

Reimbursement for the design and permitting of approximately 15,000 LF of force main along Buffalo Canal from Ft. Hamer Road to the North County Wastewater Treatment Plant as described in the Stantec Professional Services Agreement with Neal Land & Neighborhoods, LLC.

Rationale

The current wastewater master plan shows three force mains (16", 20", and 24") along the Erie Road East-West corridor. In an effort to reduce the amount of utilities in this corridor and ease future maintenance the County Engineer proposed an alternative route along Buffalo Canal for the future 20" force main. The master plan will be updated to reflect this and the needed size will be re-evaluated (likely a 16" based on current projections).To expedite the design of the force main, an agreement between the County and the landowner (Haval Farms, LLC and North Manatee Investment, LLC) will be entered for the reimbursement of the design and permitting costs.

Project Title: Creekside Commons Sanitary Sewer Relocation
Department: Utilities
Project Mgr: Derek O'Sullivan
Infra. Sales Tax: -
Project #: PJ6112080 **Status:** Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: Yes Project Need: Growth

Project Location

Countywide Erie Road N/S and US 301, Parrish

Description and Scope

Reroute approximately 3012 feet of an exiting 24 inch sewer gravity main from its current location onto the Creekside Commons commercial property. This project is a result of a developer's agreement in which the County will reimburse the Developer their cost to reroute the sewer gravity main.

Rationale

Approximately 3012 feet of 24 inch sewer gravity main exists from the north side of US 301 to the east side of Erie Road near the US 301/Erie Road intersection (NE quadrant). Due to the location of the sewer main, it is difficult for County staff to access and maintain this portion of the sewer collection system. This project will reroute the sewer main onto a commercial development (Creekside Commons/Benderson) located to the east of Creekside Preserve to provide better access for County staff to maintain the County's sewer collection system.

Project Location

District 1 Moccasin Wallow Road - Summerwood to Buffalo Road, Palmetto

Description and Scope

As part of the road widening project, the force main along with valves, and fittings along the route will be relocated out of the proposed roadway into the right of way. Construction consists of removal and installation of approximately 4,000 of 20" force main, plus approximately 200 LF of 6" to 12" force main.

Rationale

This project is Segment 3 of a 3 Segment plan (Summerwood to Buffalo Road), which will widen Moccasin Wallow Road from the east end of the I-75 off ramp area (approximately 75th Street E) east to US 301. The project will relocate force mains as a result of the Moccasin Wallow Road widening project.

Project Location

District 1 Moccasin Wallow Road - US 301 & 115th Avenue East, Palmetto

Description and Scope

As part of the road widening project, the reclaim main along with fire hydrants, valves, fittings, and services along the route will be relocated out of the proposed roadway into the right of way or upgrade to DIP. Construction consists of removal and installation +/- 3,223 linear feet of 30-inch DIP, +/- 242 linear feet of 24-inch DIP, +/- 15 linear feet of 8-inch PVC, +/- 15 linear feet of 6-inch PVC, +/- 31 linear feet of 4-inch PVC, +/- 107 linear feet of 42-inch Steel Casing, +/- 107 linear feet of 30-inch Steel Casing, +/- 114 linear feet of 8-inch Casing.

Rationale

This project is Segment 1 of a 3 Segment plan, which will widen Moccasin Wallow Road from the east end of the I-75 off ramp area (approximately 75th Street E) east to US 301. The project will relocate reclaim mains as a result of the Moccasin Wallow Road widening project (see transportation project #6071261).

Infra. Sales Tax: -
Project #: PJ6114980 **Status:** Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes Project Need: Growth

Project Location

District 1 SR 62 at Sand Marsh Ave, Parrish

Description and Scope

Design, permit, install, and construct: (1) approximately 1,900 LF of 18" and 300 LF of 20" force main along SR 62 from Pioneer Dr to Sand Marsh Ave and (2) approximately 4,350 LF of 16" force main along Sand Marsh Ave from SR 62 to CR 675. Review, approve, and process the final pay application for completed work and reimburse the developer based on terms of the agreement.

Rationale

The County's wastewater master plan requires an extension of a 18" sewer force main along SR 62 from Pioneer Dr to Sand Marsh Ave and a 16" force main along Sand Marsh Ave from SR 62 to CR 675. The purpose of this project is to efficiently expand the County's sewer collection system for future development in this area. Staff have requested the developer to oversize the force main extensions to meet the master plan sizes. This project funds the developer's agreement for the force main oversizing with the improvements being constructed as part of the Saltmeadows development project.

Project Location

District 1 Parrish Village, Parrish

Description and Scope

Design and construct approximately 3,200 LF of 4-inch force main and approximately 250 feet of gravity sewer. The 4-inch force main runs will be installed in the ROW to allow for commercial properties to connect private lifts stations to the County's system. A railroad permit and easement for the force main or sanitary sewer may be needed.

Rationale

Installation of force mains and gravity sewer lines for the economic improvement and development for the potential commercial development area located within the Parrish Commercial Village Overlay.

Project #: PJ6115480
Status: Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes
Project Need: Growth

Project Location

District 1 North Rye Road at Golf Course Road, Parrish

Description and Scope

Engineer, design, survey, permit, construct, construction manage approximately 7,200 linear feet of 12" sanitary sewer force main from the southernmost connection point adjacent to the Rye Ranch development, north to the existing connection pointe at the intersection of Golf Course Road. Process payment requests in accordance with the LDA and developer's agreement.

Rationale

Rye Ranch, LLC (Rye Ranch) entered into a Local Development Agreement (LDA) with Manatee County on 10/26/2021. Section 7.(C) of the LDA, requires Rye Ranch to design, permit, and construct a 12-inch sanitary sewer force main within the Rye Road right-of-way from the southernmost connection point adjacent to the Rye Ranch development, north to the existing connection point at the intersection of Golf Course Road. Rye Ranch is to into an agreement for the reimbursement of construction costs for the force main extension (as defined) less the amount of facility investment fee credits granted pursuant to the LDA. This project is to fund the reimbursement portion of the associated developer's agreement.

Subcategory: Wastewater Lift Stations
Project Title: Colony Cove 6 Lift Station RTU 522
Department: Utilities
Project Mgr: Paul Haas
Infra. Sales Tax: -
Project #: PJ6005686
Status: Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: -
Project Need: Maintenance

Project Location

District 1 162 Colony Dr N, Ellenton

Description and Scope

Rehabilitating existing Colony Cove 6 Lift Station. Convert the existing station to a Master Lift Station (MLS), including: installation of three new pumps, new Variable Frequency Drive (VFD's). Building or enclosure for new electrical components, new flow meter, and replacement piping and valving associated with the wet well and valve assembly. Rehabilitation of wet well shall include: cleaning and inspecting the existing liner and making repairs as necessary. inspection of the drop pipe and support brackets and repair or replacement as necessary, inspection of floor and bench for signs of corrosion, and repairs to the concrete where needed. Install a stand-by auxiliary pump with diesel engine with sizing appropriate for the new VFD's. Existing generator shall be saved for relocation to a different station or trailer mounting, for backup.

Rationale

The existing station is beginning to fail internally due to age and corrosion. The station serves a large area and should be considered an MLS. It is considered a high-risk station due to the flow volume and location. The addition of the Variable Frequency Drives (VFD's) will require an electrical building or enclosure for protection from the elements. By adding the VFD's, there will be a savings in power consumption and reduced wear on the pumps. This station currently has an inoperable flow meter. Installation of a new flow meter will assist with more accurately tracking flows.

Project Title: MLS 39A Emergency Generator Replacement
Department: Public Works Projects
Project Mgr: Bill Gill
Infra. Sales Tax: -
Project #: PJ6017983 **Status:** Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: - Project Need: Maintenance

Project Location

District 4 5621 39th St E, Bradenton

Description and Scope

Remove existing emergency generator from inside the lift station building, install new, larger generator outside with sound attenuating enclosure, and replace the automatic transfer switch. Convert existing generator into a mobile backup generator by mounting it on a trailer.

Rationale

Current generator is reaching life expectancy, and replacement is needed to prevent downtime due to catastrophic failure. Portable emergency generators would not be able to power all three pumps in this lift station, which could cause a sanitary sewage overflow. The generator also needs to be moved outside to reduce excessive heat in the building where electronics and control equipment are located.

Project #: PJ6017984
Status: Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: -
Project Need: Maintenance

Project Location

District 4 5621 39th St E, Bradenton

Description and Scope

Replace existing motor control center (MCC) and service entrance breaker, remove transformer, distribution center, lighting panel, equipment room lighting, and the drywell lighting. Replace and upgrade all equipment as needed to bring the MCC and other electrical components up to current electrical standards. Improve electrical area to be an air conditioned space or construct a new electrical building or enclosure. Also, the new design and electrical system configuration will include arc flash electrical safety improvements for compliance with Occupational Safety and Health Administration (OSHA) and National Fire Protection Association (NFPA-70E).

Rationale

The motor control center (MCC) sections needs to be upgraded and brought up to proper National Electrical Code standard and upgraded to proper safety code. Many of the electrical components are obsolete and are no longer serviceable. There are several components that are no longer in use as other equipment has been upgraded during previous projects.

Department: Utilities
Project Mgr: Jim Renneberg
Infra. Sales Tax: -
Project #: PJ6017985 **Status:** Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: - Project Need: Deficiency

Project Location

District 5 11201 Coral Bean Dr, Bradenton

Description and Scope

Design and construct a stationary generator with a fuel cell at lift station RTU # 390 Summerfield Village. This will include concrete pad, an Auto Transfer Switch (ATS), and anything else needed to complete the turnkey.

Rationale

Installing a stationary generator will increase the resiliency of lift station operations. The generator will harden our operations in the ability to convey wastewater during emergency (storm) events.

Category: Wastewater
Subcategory: Wastewater Lift Stations
Project Title: Missionary Village Lift Station Rehabilitation
Department: Public Works Projects
Project Mgr: Steve Clark
Infra. Sales Tax: -
Project #: PJ6022386
Status: Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: -
Project Need: Deficiency

Project Location

District 5 SR64 and 117 St E, Bradenton

Description and Scope

Evaluate and upsize wet well and pumps at Missionary Village lift station (RTU 329) due to known capacity issues. Convert the station to a Master Lift Station (MLS) by installing three new pumps, Variable Frequency Drive (VFDs), a building or enclosure for electrical components, back-up power generator or auxiliary pump, flow meter, and new piping and valving associated with the wetwell and valve assembly. Convert the existing generator into a mobile backup generator by mounting it on a trailer. Wetwell sizing and configuration and pump sizing should be determined by project design engineer.

Rationale

Improvements are needed at this lift station to correct existing capacity deficiency. The station is undersized for current peak wet weather flows and needs additional capacity. This station serves a large area and can be considered a Master Lift Station (MLS) and should have permanent stand-by power. The addition of the Variable Frequency Drives (VFDs) will require an electrical building or enclosure for protection from the elements. By adding the VFDs, there will be a savings in power consumption and reduced wear on the pumps. This station currently has no flow meter. Installation of a flow meter will assist with more accurately tracking flows. Master Plan project Southeast-3.

Project Need: Maintenance

Project Location

District 1 1355 41st Ave E, Ellenton

Description and Scope

Upgrade existing service entrance breaker, remove transformer; distribution center, lighting panel, equipment room lighting, and remove the drywell lighting. Replace and upgrade all equipment as needed to bring electrical components up to current electrical standards. Improve the electrical area to be an air conditioned space, or construct a new electrical building or enclosure. Also, the new design and electrical system configuration will include arc flash electrical safety improvements for compliance with Occupational Safety and Health Administration (OSHA) and National Fire Protection and Association (NFPA-70E). Install new above-ground flow meter.

Rationale

The main breaker needs to be upgraded and brought up to proper National Electrical Code standard and upgraded to proper safety code. Many of the electrical components are obsolete and are no longer serviceable. There are several components that are no longer in use as other equipment has been upgraded during previous projects. Electrical gear needs to be enclosed in a climate-controlled space for long-term reliability. The project will include a feasibility study to determine the options and costs to improve the electrical area to be air conditioned or to construct a new electrical building or enclosure.

Category: Wastewater **Subcategory:** Wastewater Lift Stations
Project Title: MLS N1-B Pumps & Variable Frequency Dr Replacement & Wet Well Rehab
Department: Public Works Projects
Project Mgr: Wen DeSue
Infra. Sales Tax: -
Project #: PJ6022388 **Status:** Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: - Project Need: Maintenance

Project Location

District 1 2903 69th St E, Palmetto

Description and Scope

Remove and replace existing Flygt pumps and ABB Variable Frequency Drives (VFDs). Pump hydraulic conditions should be evaluated to account for projected flows from the Wastewater Collection System Master Plan and hydraulic model, including diversion of Lift Station N1-H flows away from MLS N1-B (flows diverted to Artisan Lakes MLS). Install new flow-through mag-meter in appropriate location. Clean and inspect existing wetwell liner and repair as needed. Clean, prepare, and make any needed repairs to concrete structure before application of new liner or repairs. Inspect discharge piping, guide rails, pipe bracing, base ells, influent force main brackets, and mounting plates for corrosion damage, and replace as necessary. Install new comminuter pump.

Rationale

Current pumps and VFDs are reaching their life span and are in need of replacement. Pumps are showing signs of wear and aging due to the corrosive atmosphere. In addition, the hydraulic conditions of the station will change resulting from diversion of Lift Station N1-H flows to a different MLS (flows at N1-B expected to decrease). Current flow meter has reached its life expectancy and is in need of replacement with high repair costs. Wetwell lining repairs or replacement is anticipated to be needed by this time.

Description and Scope

Rehabilitate and upsize Lift Station 9-A (RTU 436). Install a new lined wet well, install new pumps (approximately 40 horsepower), and electrical equipment associated with improvements; replace piping and valving associated with the wetwell and valve assembly; and install a new flow meter. Install new force main (approximately 6,060 feet) of 12-inch pipe. Evaluation of pump design point and wet well size should be evaluated by project design engineer. Cost estimate based on a 12-foot diameter wet well.

Rationale

Improvements are needed at this lift station to correct capacity deficiencies. Master Plan project # Southwest-2.

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: -
Project Need: Maintenance

Project Location

District 3 6504 5th Ave NW, Bradenton

Description and Scope

Rehabilitate existing Lift Station 9D. Convert the existing station to a Master Lift Station (MLS), including installation of three new pumps, new Variable Frequency Drive (VFDs), building or enclosure for new electrical components, new flow meter, and replacement piping and valving associated with the wetwell and valve assembly. Replace fence to enclose entire lift station property and components. Rehabilitation of a wetwell will include cleaning and inspecting the existing liner and make repairs as necessary, inspection of the drop pipe and support brackets and repair or replacement as necessary, inspection of floor and bench for signs of corrosion and repairs to the concrete where needed. Install a stand-by auxiliary pump with diesel engine, with sizing appropriate for the new VFDs. Existing generator shall be saved for relocation to a different station or trailer mounting for backup.

Rationale

The existing station is beginning to fail internally due to age and corrosion. This station serves a large area and should be considered a Master Lift Station (MLS). The addition of the (Variable Frequency Drives) VFDs will require an electrical building or enclosure for protection from the elements. By adding the VFDs, there will be a savings in power consumption and reduced wear on the pumps. This station currently has no flow meter. Installation of a flow meter will assist with more accurately tracking flows.

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: -
Project Need: Maintenance

Project Location

District 4 1801 55th Ave. W., Bradenton

Description and Scope

Construct new Lift Station (LS) 29A located 50 feet north of the existing LS. Furnish and install two new 10 hp submersible pumps, new 12 ft diameter, 20 ft deep lined wet well, new piping and valving associated with the wet well and valve assembly, new electrical instrumentation and control components including 80 kw emergency generator, and all piping and valving necessary to transfer service to the new LS. Remove existing LS and construct new manhole adjacent, first three upstream manholes will be polymer concrete. ARC flash study required since this is a new lift station. Need to purchase land for at least an 40' x 40' in size in Fiscal Year 2023.

Rationale

Relocating the lift station 50 feet north will improve access to the site and safety to the lift station. The current lift station is on the edge of the roadway. This creates a risk of being damaged by vehicular traffic. The current lift station was installed in 1976. By constructing a new lift station to the North. We can gain access, upgrading the station to newer technologies.

Description and Scope

Remove and replace existing pumps and variable frequency drives (VFDs). Project includes evaluation of hydraulic conditions and selection of appropriate pump design point. Capacity and performance of existing pumps should be evaluated with a pump test.

Rationale

Current equipment reaching end of predicted life span are in need of replacement. Pumps are showing signs of wear and aging due to the corrosive atmosphere.

Description and Scope

Replace existing motor control center and service entrance breaker, remove transformer, distribution center, lighting panel, equipment room lighting, and drywell lighting. Replace and upgrade all equipment as needed to bring the MCC and other electrical components to current electrical standards. Improve electrical area to air conditioned space, and configuration will include arc flash electrical safety improvements for Occupational Safety and Health Administration (OHSA) and National Fire Protection Association(NFPA-70E)compliance.

Rationale

The motor control center needs to be upgraded and brought to proper National Electrical Code standards and upgraded to proper safety codes. Many of the electrical components are obsolete and no longer serviceable.

Category: Wastewater **Subcategory:** Wastewater Lift Stations
Project Title: Bayshore Yacht Basin (RTU 101) Relocation and Force Main Replacement
Department: Public Works Projects
Project Mgr: Steve Clark
Infra. Sales Tax: -
Project #: PJ6097484 **Status:** Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: - Project Need: Deficiency

Project Location

District 4 6735 26th St W, Bradenton

Description and Scope

Construct new master lift station (MLS) for the Bayshore Yacht Basin located adjacent to the existing station. Convert the station to a MLS, comprised of three pumps, wetwell, VFDs, building or enclosure for electrical components, back-up power generator or auxiliary pump, flow meter, and all piping and valving necessary to transfer service to the new MLS. Demolish existing lift station. Replace existing force main with a new alignment from the new MLS to the tie-in with the MLS 12-A force main. Design engineer shall review historical flow data to appropriately size the pump station and forcemain. Recent collection system rehabilitation has decreased flows to this station, and this may warrant decreased sizing from what was estimated in the Master Plan.

Rationale

The existing station is located within a private gated area. Site location limits require it to remain within this area. The station is undersized for current peak wet weather flows and needs additional capacity. This station serves a large area and can be considered a MLS and should have permanent stand-by power. The force main is also undersized and needs to be upsized to increase transmission capacity. In conjunction with this project, the County should conduct gravity system inspection (CCTV, smoke testing, etc.) within the RTU 101 gravity system basin to determine priority areas for sewer rehabilitation. Master Plan project SW-1.

Infra. Sales Tax: -
Project #: PJ6097580 **Status:** Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: - Project Need: Maintenance

Project Location

District 5 11600 Clubhouse Dr, Bradenton

Description and Scope

Install new above ground flow through Magmeter. Remove and replace existing liner. Clean prep and make any needed repairs to concrete structure before application of new liner system. Install new in-line grinder system. Replace discharge piping, guide rails, pipe bracing, base ells, and/or mounting plates. Also replace the influent force main pipe restraints.

Rationale

Current strap-on flow meter is not functional. Due to the heavily corrosive atmosphere, the existing fiberglass liner is beginning to delaminate from the concrete structure allowing hydrogen sulfide to deteriorate the concrete behind it. Extensive damage to concrete can cause the structure to become unsafe. The base elbows are worn and need replaced to prevent leaks or blow by from developing and causing additional damage. The old pipe is C900 PVC and needs to be replaced with our current Utility Standard DR11 High Density polyethylene (HDPE). Pipe restraints are corroded and need to be replaced with 316SS restraint system.

LOS/Concurrency: - Project Need: Maintenance

Project Location

District 5 11600 Clubhouse Dr, Bradenton

Description and Scope

Replace existing motor control center (MCC) and service entrance breaker, remove transformer, distribution center, lighting panel, and equipment room lighting. Replace and upgrade all equipment as needed to bring electrical components up to current electrical standards. Replace generator, or install a stand-by auxiliary pump with diesel engine, with sizing appropriate for the recently replaced VFDs and new electrical improvements. Improve the electrical area to be an air conditioned space, or construct a new electrical building or enclosure. The new electrical system configuration will include arc flash electrical safety improvements for compliance with Occupational Safety and Health Administration (OSHA) and National Fire Protection Association (NFPA-70E).

Rationale

The MCC and main breaker need to be upgraded and brought up to proper National Electrical Code standard and upgraded to proper safety code. The generator needs to be replaced with a newer appropriately sized unit, or with an auxiliary pump with diesel engine that can provide reliable backup pumping during electrical outages. The project should include an evaluation of the feasibility, costs, advantages, and disadvantages of using an auxiliary pump versus a standby generator. Electrical gear needs to be enclosed in a climate-controlled space for long-term reliability. The project will include a feasibility study to determine the options and costs to improve the electrical area to be air conditioned or to construct a new electrical building or enclosure.

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: - Project Need: Deficiency

Project Location

District 3 Vicinity of 26th St W and 38th Ave W, Bradenton

Description and Scope

Furnish and install approximately 2,100 linear feet (LF) of new 21-inch and 24-inch influent gravity main into Lift Station 36A. Sizing to be confirmed by design engineer based on latest flow projections considering site redevelopment. Install new connections as needed. Replace Lift Station 36A in a new location with upsized and lined wetwell, new pumps, and all necessary electrical and instrumentation components per the County's standards. Apply wetwell liner and replace wetwell top slab at Lift Station 33A. Replace the Bayshore on the Lakes Lift Station in a new location including upsized and lined wetwell, new pumps, upsized 8-inch discharge piping, and all necessary electrical and instrumentation components per the County's standards. First three upstream manholes will be polymer concrete for 36A and Bayshore on the Lakes. Install the Data Flow Systen (DFS) bubbler level control systems at all three locations. Conduct ARC Flash study for all three lift stations.

Rationale

Improvements based on Project SW-7 from the Southwest Wastewater Collection Master Plan to address capacity issues at 36A and Bayshore on the Lakes and corrosion issues at Lift Station 33A.

Project #: PJ6101480
Status: Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: -
Project Need: Maintenance

Project Location

District 4 2007 Bay Dr, Bradenton

Description and Scope

Replace existing motor control center (MCC) and service entrance breaker, remove transformer, remove distribution center, remove lighting panel, remove the equipment room lighting, and remove the drywell lighting. Replace and upgrade all equipment as needed to bring the MCC and other electrical components up to current electrical standards. Improve electrical area to be an air conditioned space or install a new electrical building or enclosure. Also, the new design and electrical system configuration will include arc flash electrical safety improvements for compliance with Occupational Safety and Health Administration (OSHA) and National Fire Protection Association (NFPA-70E).

Rationale

The MCC needs to be upgraded and brought up to proper National Electrical Code standard and upgraded to proper safety code. Many of the electrical components are obsolete and are no longer serviceable. There are several components that are no longer in use as other equipment has been upgraded during previous projects.

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: -
Project Need: Maintenance

Project Location

District 4 112 63rd Ave E, Bradenton

Description and Scope

Upgrade existing service entrance breaker; remove transformer, distribution center, lighting panel, equipment room lighting, and the drywell lighting. Replace and upgrade all equipment as needed to bring electrical components up to current electrical standards. Improve the electrical area to be an air conditioned space, or construct a new electrical building or enclosure. Also, the new design and electrical system configuration will include arc flash electrical safety improvements for compliance with Occupational Safety and Health Administration (OSHA) and National Fire Protection Association (NFPA-70E).

Rationale

The main breaker needs to be upgraded and brought up to proper National Electrical Code standard and upgraded to proper safety code. Many of the electrical components are obsolete and are no longer serviceable. There are several components that are no longer in use as other equipment has been upgraded during previous projects. Electrical gear needs to be enclosed in a climate-controlled space for long-term reliability. The project will include a feasibility study to determine the options and costs to improve the electrical area to be air conditioned or to construct a new electrical building or enclosure.

Project #: PJ6101581
Status: Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: -
Project Need: Maintenance

Project Location

District 4 112 63rd Ave E, Bradenton

Description and Scope

Remove existing fiberglass liner, make repairs to concrete structure where applicable, apply new liner, repair or replace platform/grating/stairs/handrail where applicable, replace stop gate channels and inspect aluminum stop gates, install new LED lighting system, inspect Muffin Monster for wear and replace if needed.

Rationale

Due to the heavily corrosive atmosphere, the existing fiberglass liner is beginning to delaminate from the concrete structure allowing hydrogen sulfide to deteriorate the concrete behind it. Extensive damage to concrete can cause the structure to become unsafe. The stop gate channels are becoming inoperable and need to be replaced to allow for isolation of the flow channels. The lighting system is subpar and needs to be upgraded to make work within the confined space safer and easier.

Project #: PJ6101680 **Status:** Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: - Project Need: Maintenance

Project Location

District 4 2007 Bay Dr, Bradenton

Description and Scope

Remove and replace existing pumps and variable frequency drives (VFDs). Project includes evaluation of hydraulic conditions to correctly size new pumps. Bypass pumping will likely be necessary during construction.

Rationale

Current pumps and VFDs are reaching their life span and are in need of replacement. Pumps are showing signs of wear and aging due to the corrosive atmosphere.

Category: Wastewater **Subcategory:** Wastewater Lift Stations
Project Title: Artisan Lakes Master Lift Station Rehabilitation
Department: Public Works Projects
Project Mgr: Steve Clark
Infra. Sales Tax: -
Project #: PJ6110280 **Status:** Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: - Project Need: Maintenance

Project Location

District 1 9760 Gillette Rd, Palmetto

Description and Scope

Install new above ground flow through Magmeter. Clean and inspect existing wetwell fiberglass liner, repair as needed. Clean prep and make any needed repairs to concrete structure before application of liner repairs. Inspect discharge piping, guide rails, pipe bracing, base ells, influent force main brackets, and/or mounting plates for corrosion damage, remove and replace as necessary. Remove and replace submersible pumps. Evaluate and replace Heating Ventilation and Air Conditioning (HVAC) system for climate control inside the station. Install new crane assembly above wetwell to facilitate raising pumps.

Rationale

The flow meter at this station regularly requires maintenance and needs replaced. Due to the heavily corrosive atmosphere, the existing fiberglass liner should be inspected for delamination and leaks which would allow hydrogen sulfide to deteriorate the concrete behind it. Extensive damage to concrete can cause the structure to become unsafe. The hardware needs to be inspected for corrosion damage before catastrophic failure could occur. Pipe restraints are beginning to corrode and need to be replaced with 316SS restraint system. At the time of this project the pumps will have reached their useful life. Currently this master lift station (MLS) does not have a crane and it is difficult to remove pumps for inspection and service.

Project Mgr: Bill Gill
Infra. Sales Tax: -
Project #: PJ6110380 **Status:** Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: - Project Need: Maintenance

Project Location

District 5 12405 44th Ave E, Bradenton

Description and Scope

Install new above ground flow through Magmeter. Clean and inspect existing wetwell fiberglass liner, repair as needed. Clean prep and make any needed repairs to concrete structure before application of liner repairs. Inspect discharge piping, guide rails, pipe bracing, base ells, influent force main brackets, and/or mounting plates for corrosion damage, remove and replace as necessary. Remove and replace submersible pumps. Evaluate and replace HVAC system. Install new crane assembly above wetwell. Engineer should evaluate addition of 4500 single-family units from outside of current service area to this master lift station (MLS). Perform analysis to determine what improvements to MLS pumps, wetwell, etc. and forecmain are necessary for this additional service, including downstream.

Rationale

The flow meter at this station regularly requires maintenance and needs to be replaced. Due to the heavily corrosive atmosphere, the existing fiberglass liner should be inspected for delamination and leaks which would allow hydrogen sulfide to deteriorate the concrete behind it. Extensive damage to concrete can cause the structure to become unsafe. The hardware needs to be inspected for corrosion damage before catastrophic failure could occur. Pipe restraints are beginning to corrode and need to be replaced with 316SS restraint system. Currently this MLS does not have a crane. The area served by this MLS is experiencing new residential construction.

Category: Wastewater **Subcategory:** Wastewater Lift Stations
Project Title: N1C Upgrade to a MLS & Reroute Tidevue FM flows to N1C Gravity Main
Department: Utilities
Project Mgr: Zachary Tarifa
Infra. Sales Tax: -
Project #: PJ6111881 **Status:** Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: - Project Need: Growth, Deficiency

Project Location

District 1 3800 Erie Road, Palmetto

Description and Scope

To convert Lift Station (LS) N1C to a Master Lift Station (MLS), including furnishing and installation of a new wet well, four (4) 92-hp pumps with Variable Frequency Drives (VFDs), a new building for/with electrical upgrades, odor control, and slab, new piping, valving, and appurtenances, a 400kW generator, docking station and slab, site demolition/preparation/restoration, flow meter, vaults, crane, and force main and manhole improvements (First three (3) upstream manholes will be polymer concrete). Upgrade LS N1C discharge force main to 20 inches.

Rationale

This project is designed to correct the wet weather high flow hydraulic overloading on the Tidevue force main by lowering the head pressure condition in the Tidevue force main. The "FM Pipe for Redirection of Flow from Colony Cove 6 LS (RTU 522)" project must run parallel to this project.

Project Title: Upper Manatee River Rd RTU #330 Rehabilitation
Department: Utilities
Project Mgr: Paul Haas
Infra. Sales Tax: -
Project #: PJ6117680 **Status:** Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: - Project Need: Maintenance

Project Location

District 5 1010 Upper Manatee River Road, Bradenton, FL

Description and Scope

Remove existing electrical equipment and piping associated with the wet well. Remove riser pipes and bases from wet well. Remove and replace wet well lid and hatches. Remove underground valve vault. Remove existing liner and install new liner in wet well. Install new bases, riser pipes, and pipe supports. Install new valve assembly and flow meter above ground. Install new electrical service, transfer switch, and control panel. Existing generator is to be reused. Reroute conduits to new locations and install new conductors. Rework fencing and driveway to accommodate new design.

Rationale

This Lift Station is located on a main road that is scheduled for a road widening project. The equipment and structure at this location has reached its expected life span and is due for rehabilitation. Repairing this structure and replacing equipment will ensure proper and reliable operation. Creating a thoroughfare driveway at this site will allow staff to safely access the site and avoid additional traffic on this roadway.

Project Title: 13A Master Lift Station Upgrade
Department: Utilities
Project Mgr: Jim Renneberg
Infra. Sales Tax: -
Project #: PJTP25025
Status: Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: -
Project Need: Deficiency

Project Location

District 4 112 63rd Ave East, Bradenton

Description and Scope

Remove pumps, piping, and appurtenances from the drywell, remove the grinder system, lighting fixtures, and all fiberglass platform and railings from the wetwell and demo the above-ground level and the concrete dividing wall between the wetwell and drywell to create one open concrete pit. Utilize the open structure to construct a new concrete wetwell within that open cavity and backfill the remaining voids. Install discharge piping, guide rails, pipe bracing, base ells, and riser piping per our current Manatee County Detail converting this station to a submersible configuration. Install above-ground valve assembly with new flow through the Mag meter per County Detail, install a new gantry crane system over the wetwell, and install new security fencing around the new lift station site. Upgrade electrical, instrumentation, and control components as required. Repair/replace driveway as needed. Conduct Arc Flash study.

Rationale

The station does not meet the new standards for this type of structure. This project will bring the station up to the new standards. This Master Lift Station (MLS) upgrade project would be the final stage of bringing MLS 13A into the current design standards for our Master Lift Stations. In addition, by converting this station to a submersible application and eliminating the wetwell / drywell configuration, we will increase the safety of our operation by eliminating the requirement of routine entry into a permit-required confined space to do weekly checks.

Project #: PJTP25026 **Status:** Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: - Project Need: Deficiency

Project Location

District 4 3790 El Conquistador Pkwy, Bradenton

Description and Scope

Design and construct a stationary generator with at lift station RTU # 104 EL Conquistador 1. This will include a concrete pad, an Auto Transfer Switch (ATS), and anything else needed to complete the turnkey. EL Conquistador 1 RTU 104, 800 GPM. Elevate generator pad since it is close to a flood plain. May need to replace existing white PVCfwncw.

Rationale

Installing a stationary generator will increase the resiliency of lift station operations. The generator will harden our operations in the ability to convey wastewater during emergency (storm) events.

Description and Scope

Demo the existing structure and utilize the open structure to construct a new polymer concrete wetwell within that open cavity and backfill the remaining voids. The Engineer of Record (EOR) needs to determine the wetwell size. Redirect gravity flow to the newly constructed wetwell. First three (3) upstream manholes will be polymer concrete. Install discharge piping, guide rails, pipe bracing, base ells, and riser piping per our current Manatee County Detail converting this station to a submersible configuration. Install above-ground valve assembly with new flow through the Mag meter per County Detail, install a new gantry crane system over the wetwell, and install new security fencing around the new lift station site. Upgrade electrical, instrumentation, and control components as required. Repair/replace driveway as needed. Install restroom with associated lighting and water/sewer connections. Eyewash station and shower to be provided on the exterior of the restroom. Conduct Arc Flash study.

Rationale

This station was originally constructed in 1976 and the structure is nearing the end of its useful life.

Project Location

Multi-district Various MLS locations

Description and Scope

Install new crane assemblies above wetwells to facilitate raising pumps at Heritage Harbour (RTU 640), Lakewood Ranch (RTU 362), and Rye Road (RTU 892), Master Lift Stations.

Rationale

Master Lift Stations (MLS) located at: Heritage Harbour (RTU 640), Lakewood Ranch (RTU 362), Rye Road (RTU 892), do not have cranes and it is difficult to remove pumps for inspection and service.

Infra. Sales Tax: -
Project #: PJWW02027
Status: Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: -
Project Need: Deficiency

Project Location

District 3 1806 51st St W, Bradenton

Description and Scope

Remove pumps, piping, and appurtenances from the drywell, remove grinder system, lighting fixtures, and all fiberglass platform and railings from wetwell and demo the above ground level and the concrete dividing wall between wetwell and drywell to create one open concrete pit. Utilize the open structure to construct a new concrete wetwell (size to be setermined by design EOR) within that open cavity and backfill remaining voids. Redirect gravity flow to the newly constructed and lined wetwell. First three upstream manholes will be polymer concrete. Pumps in 1D MLS were installed around 2005 and are reaching the end of useful life very soon. Install new pumps, discharge piping, guide rails, pipe bracing, base ells per our current Manatee County Detail converting this station to a submersible configuration. Install above ground valve assembly with new flow through Magnetic flow meter per County Detail, install new gantry crane system over the wetwell, and install new security fencing around the new lift station site. Install Variable Frequency Drives (VFDs) and upgrade electrical, instrumentation, and control components as required and conduct Arc Flash study. Repair/replace driveway as needed. Install restroom with associated lighting and water/sewer connections. Eye wash station and shower to be provided on the exterior of the restroom.

Rationale

This project would be the final stage of bringing Master Lift Station (MLS) 1D into the current design standards for master lift stations. In addition, by converting this station to a submersible application and eliminating the wetwell/drywell configuration, this will increase the safety of the operation and eliminate routine entry into a permit required confined space to do weekly checks. Other improvements will be easier interchange of spare pumps, elimination of the grinder system, and the improved efficiency when cleaning the wetwell.

Description and Scope

Remove pumps, piping, and appurtenances from the drywell, remove grinder system, lighting fixtures, and all fiberglass platform and railings from wetwell and demo the above ground level and the concrete dividing wall between wetwell and drywell to create one open concrete pit. Utilize the open structure to construct a new concrete lined wetwell (size to be determined by design Enginer of Record (EOR)) within that open cavity and backfill remaining voids. Redirect gravity flow to the newly constructed and lined wetwell. First three upstream manholes will be polymer concrete. Install discharge piping, guide rails, pipe bracing, base ells and riser piping per our current Manatee County Detail converting this station to a submersible configuration. Install above ground valve assembly with new flow through Mag meter per County Detail, install new gantry crane system over the wetwell, and install new security fencing around the new lift station site. Upgrade electrical, instrumentation, and control components as required and conduct Arc Flash study. Repair/replace driveway as needed. Generator upgrade and associated improvements are included in a separate CIP and scheduled for FY 28. Install restroom with associated lighting and water/sewer connections. Eye wash station and shower to be provided on the exterior of the restroom.

Rationale

This station and structure is nearing the end of its useful life. A project to move the motor control center (MCC) out into its own climate-controlled building on an elevated platform is in process. Converting this station to a submersible application, will increase the safety of our operation by eliminating the requirement of routine entry into a permit required confined space. Other improvements will be easier interchange of spare pumps, elimination of the grinder system, and the improved efficiency when cleaning the wet well.

Project Title:	Master Lift Station #5 Generator Upgrade		
Department:	Utilities		
Project Mgr:	Jim Renneberg		
Infra. Sales Tax:	-		
Project #:	PJWW02248	**Status:**	Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: - Project Need: Deficiency

Project Location

District 3 4150 Gulf Drive, Holmes Beach

Description and Scope

Remove the existing generator, enclosure, and fuel tank. Supply new generator with enclosure and subbase fuel tank. Construct a new elevated concrete platform to 13.00 feet for the new generator with the subbase fuel tank. Reroute electrical and alarm signal conduits and conductors to a new platform. Relocate the generator docking station to a new elevated platform. Provide stairs to a new platform to access equipment.

Rationale

The existing generator and fuel tank is currently installed at ground level (roughly 6.00 feet above sea level), making this equipment vulnerable to flooding. Flooding could lead to equipment failure, fuel tank leaks, and/or a Sanitary Sewer Overflow (SSO) which would have a detrimental impact to the environment. This generator was installed in 2009 but is in poor condition caused by sewer gas and saltwater in the air and it is reaching the end of its usable life. By installing a new generator and fuel tank on an elevated platform, this will protect the equipment from flood waters during a storm or coastal flooding event.

Project #: PJWW02249
Status: Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: -
Project Need: Maintenance

Project Location

District 4 5621 39th Street East, Bradenton

Description and Scope

Remove pumps, piping, and appurtenances from the drywell, remove grinder system, lighting fixtures, and all fiberglass platform and railings from wetwell and demo the above-ground level and the concrete dividing wall between wetwell and drywell to create one open concrete pit. Utilize the open structure to construct a new concrete wetwell (to be determined ny Engineer of Record (EOR)) within that open cavity and backfill the remaining voids. Redirect gravity flow to the newly constructed and lined wetwell. First three upstream manholes will be polymer concrete. Install discharge piping, guide rails, pipe bracing, base ells and riser piping per our current Manatee County Detail converting this station to a submersible configuration. Install above-ground valve assembly with new flow through Mag meter per County Detail, install a new gantry crane system over the wetwell, install new security fencing around the new lift station site and conduct Arc Flash study.

Repair/replace driveway as needed. Install restroom with associated lighting and water/sewer connections. Eye wash station and shower to be provided on the exterior of the restroom.

Rationale

The Department has two projects; one, to move the motor control center (MCC) into its own climate-controlled building on an elevated platform, and two, to move the generator outside of the control room. This Master Lift Station upgrade project would bring MLS #39A to current design standards. Converting this station will increase safety by eliminating the requirement of weekly entry into a permit required confined space. Other improvements: interchange of spare pumps, elimination of the grinder system, and the improved efficiency when cleaning the wetwell.

Project Title: 11th Ave W and 75th St W Reclaimed Water Main Improvements
Department: Public Works Projects
Project Mgr: Justin Rourk
Infra. Sales Tax: -
Project #: PJ6002294
Status: Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: -
Project Need: Deficiency

Project Location

District 3 11th Ave W and 75th St W, Bradenton

Description and Scope

Upsize existing 10" reclaimed water main along 11th Ave W from 68th Street W to 75th St W continuing north along 75th St. W from 11th Ave to Manatee Avenue and then on the north side of Manatee Avenue for approximately 70 ft by removing the existing 10" and furnishing and installing a total of approximately 4,600 LF of new 12" reclaimed water main. There is an existing section of 12" under Manatee Ave that can remain.

Rationale

An increase in pipe size is necessary for the 10" reclaimed water mains along 11th Ave W from 68th Street West to 75th Street West and along 75th Street West from 11th Avenue West to Manatee Avenue to decrease velocities in excess of 6 feet per second (fps) and resulting high head loss within the existing pipelines. The high head loss is causing low pressures in the Palma Sola and Wisteria Park area that is served by the existing 10" and 12" mains along 75th St W and 11th Ave W. Increasing the diameter of these pipelines to 12" will decrease the velocity and head loss, resulting in increased pressure for customers.

Status: Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes
Project Need: Growth

Project Location

District 1 Golf Course Road (near Ft. Hamer Road), Parrish

Description and Scope

Design, permit, and construct a 24" reclaimed water main from the existing stub at 127th Ave E to the western boundary of the Windwater residential development. Reimburse developer based on monthly invoices submitted in accordance with the agreement with the developer. The design and construction of this improvement has been approved under the construction plans for the Windwater (fka Wildcat Preserve) development (PLN2109-0030, as revised).

Rationale

To further expand the County's reclaimed water system infrastructure to provide more availability to communities in accordance with the adopted reclaimed water master plan. This project has an associated developer's agreement with terms and conditions related to the funding of this project.

Project Location

District 1 Erie Rd - Martha Road to US 301, Parrish

Description and Scope

Install approximately 4,900 linear feet of 16" DIP reclaim water line from Martha Rd to US301.

Rationale

With the modification of the Erie Rd E/W transportation project, it was determined to separate this project into two portions. First being the 16" DIP reclaim water line from Martha Rd to US301 to align with the transportation project. The remaining segment from Martha Rd to Harrison Ranch Blvd will be become a Project of Record until funding is available.

Project #: PJ6090991
Status: Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes
Project Need: Growth

Project Location

District 1 Golf Course Rd at Ft Hamer Rd, Parrish

Description and Scope

Design, permit, install, manage and construct approximately 4,800 linear feet of 24" reclaimed water main from the existing 6" reclaimed water main located at 127 Avenue East eastward and connecting to the existing 30" reclaimed water main near Spencer Parrish Road. Review, approve, and process monthly pay application for completed work and reimburse the developer based on terms of the agreement.

Rationale

The County's reclaimed water master plan includes the extension of a 24" reclaimed water main from Buffalo Creek Canal south along Fort Hamer Road then east along Golf Course Road to an existing 30" reclaimed water main at Spencer Parrish Road. This project is to efficiently expand the County's reclaimed water system for future development in this area. Staff have requested the developer to install and extend a 24" reclaimed water main from 127th Avenue East to Spencer Parrish Road in accordance with the County's master plan. Also, this project is to fund the associated developer's agreement for the reclaimed main extension.

Project Location

District 4 Corner of 53rd Ave and 66th St W to El Conquistador Pkwy, Bradenton

Description and Scope

Installation of 3,000 LF of 16-inch reclaimed water distribution line from southwest corner of 53rd Avenue and 66th Street West south to El Conquistador Parkway.

Rationale

Replaces aging 14 inch pipeline serving IMG Academy and allows for the consolidation of master meters for this user from 3 to 1. Will also serve new customers once the Lake Flores Community is completed.

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: -
Project Need: Growth

Project Location

District 1 Erie Rd - 69th St E to Martha Road, Parrish

Description and Scope

Install reclaimed water line to complete a major looped system for Erie Road and Copperstone. This project was originally part of Project #6085590 but was separated due to the Martha to US301 transportation project. This will be for the remaining portion to complete the major looped system from Martha Rd to Harrison Ranch Blvd and will be constructed along with the related Erie Road E/W Roadway widening project from 69th St E to Martha Road.

Rationale

Construct reclaim water line from Martha Rd to Harrison Ranch Boulevard using approximately 9,350 liner feet of 16 inch ductile iron pipe. The project includes miscellaneous relocations/adjustment of existing reclaimed water infrastructure from 69th to Harrison Ranch Blvd as needed to accommodate proposed roadway improvements. Design and construction to run concurrent with the related roadway project from 69th St E to Martha Rd.

LOS/Concurrency: Yes
Project Need: Growth

Project Location

District 1 SR 62 at Sand Marsh Ave, Parrish

Description and Scope

Design, permit, install, and construct approximately 1,900 LF of 12" and 300 LF of 16" reclaimed main along SR 62 from Spencer Parrish Road to Sand Marsh Ave. Review, approve, and process the final pay application for completed work and reimburse the developer based on terms of the agreement.

Rationale

The purpose of this project is to efficiently expand the County's reclaimed water availability for future development in this area. Staff has requested the developer to oversize the reclaimed extension from an 8" to 12" along SR 62. This project is to fund the developer's agreement for the reclaimed main oversizing with the improvements being constructed as part of the Saltmeadows development project.

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: -
Project Need: Growth

Project Location

District 4 66th St W - SWRWFR to 53rd Ave W and E to 65th St W, Bradenton

Description and Scope

Install approximately 3,900 LF of new 24" reclaimed water main along 66th Street West from existing 42" reclaimed water main from Southwest Water Reclamation Facility (SWWRF) south to 53rd Avenue West and east to existing northern 24" reclaimed water main along 53rd Ave W at the intersection with 65th St West.

Rationale

The existing 24" reclaimed water main along 66th Ave from SWWRF will be limited in capacity and as a result will experience high velocities and head loss in the future based on the Reclaimed Water Master Plan model evaluations. The new parallel main from just outside of SWWRF will connect to the existing parallel main on 53rd Ave W and provide additional capacity for transferring reclaimed water to the Southeast Regional Water Reclamation Facility (SERWRF) and North Regional Water Reclamation Facility (NRWRF) service areas in the future while maintaining a minimum pressure of 40 pounds per second (psi) in the Manatee County Master Reuse System (MCMRS).

Infra. Sales Tax: -
Project #: PJWW02161
Status: Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: -
Project Need: Deficiency

Project Location

District 1 Harrison Ranch Blvd, Parrish

Description and Scope

Upsize the existing 10" and 8" segments of reclaimed water main along Harrison Ranch Blvd from the northwest corner of the intersection with 60th Ln East; southeast to the intersection with 55th Ln East; by removing approximately 2,600 LF of existing reclaimed water main and furnishing and installing approximately 2,600 LF of new 12" reclaimed water main.

Rationale

The Reclaimed Water Master Plan hydraulic model evaluations identified high velocities and head loss through the 10" and 8" segments which resulted in pressures below 40 pounds per square inch (psi) during the maximum day demand simulations. The upsized 12" pipe will reduce velocities and head loss while increasing downstream pressures above the recommended 40 psi minimum.

Project Location

District 1 Erie Rd - Martha Road to US 301, Parrish

Description and Scope

The Erie Rd E/W Phase for roadway functional improvements is being changed to 2-lane to 4-lane widening from Martha Rd to US301. This project aligns to be the wastewater lines relocations for the transportation project.

Rationale

The Erie Rd E/W Phase for roadway functional improvements is no longer being considered. Instead, the transportation project is now 2-lane to 4-lane widening from Martha Rd to US301. The original Erie Rd E/W Phase had associated projects for the utility relocations and this one is being changed to match the new transportation project.

Department: Public Works Projects
Project Mgr: Al Neumann
Infra. Sales Tax: -
Project #: PJ6086980
Status: Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes
Project Need: Growth

Project Location

Multi-district 44th Ave E - 45th St - 44th Ave Plz E, Bradenton

Description and Scope

Addition of 8 inch Ductile Iron Pipe (DIP) and PVC wastewater force main along 44th Avenue East from 45th Street East to Morgan Johnson Road with force main stubs for future connections at 45th Street East and 51st Street East. The dry force main will be placed on the deck of the proposed bridge over the Braden River. Caruso Road will be realigned to intersect with 44th Avenue East at the existing intersection with Morgan Johnson Road. At this location, the existing active force main on Morgan Johnson Road will be reconstructed to connect to a proposed force main that will connect to an existing active force main at the intersection of the existing Caruso Road. In addition, a new DIP force main stub will be constructed to the north under 44th Avenue East at 65th Street East, a new dry DIP force main will be constructed under Caruso Road adjacent to the existing force main from the Dude Ranch lift station, and gravity wastewater mains will be constructed to extend the existing active gravity system along the east side of Caruso Road.

Rationale

Project will extend wastewater service in the area.

Project Location

District 1 Moccasin Wallow Road-US 41- Gateway Blvd, Palmetto

Description and Scope

As part of the road widening project, the water main along with fire hydrants, valves, and services along the route will be relocated out of the proposed roadway into the right of way. Construction consists of removing +/- 1,572 LF of 4" and +/- 3,230LF of 6" and install +/- 2,740 LF of 10", +/- 75 LF of 16" and +/- 4,704 of 20" pipeline.

Rationale

Relocate reclaim main as a result of the Moccasin Wallow Road widening project (see transportation project #6092560 IST)

Project Title: Factory Shops Apartments - Gravity Sewer Reroute
Department: Public Works Projects
Project Mgr: Al Neumann
Infra. Sales Tax: -
Project #: PJ6116280
Status: Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: Yes
Project Need: Growth

Project Location

District 1 60th Avenue East at Factory Shops Blvd, Ellenton

Description and Scope

Design, engineer, permit, install, construct, and provide required utility easement for approximately 564 linear feet of 10-inch gravity sewer main from sewer manhole (SMH015848) northward, through the development's property, connecting to sewer infrastructure located on the Springs at Ellenton's property in accordance with the construction plans for the Factory Shops Apartments. Process payment requests in accordance with the developer's agreement.

Rationale

An existing gravity sewer main is located within the limits of a capital improvement project for the widening of 60th Ave East (#6083160) in Ellenton. The County has requested the developer of the Factory Shops Apartments project (PLN2208-0057) to reroute the existing gravity main through their development outside the limits of the capital project and upsize the main to accommodate existing flows in the area. This project has an associated developer's agreement with terms and conditions related to the funding of the improvements.

Project Title: SEWRF Belt Filter Press Rehab
Department: Public Works Projects
Project Mgr: Jim Renneberg
Infra. Sales Tax: -
Project #: PJ6013982
Status: Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: -
Project Need: Maintenance

Project Location

District 5 3331 Lena Rd, Bradenton

Description and Scope

Completely rehab belt press #2. Installation of additional belt press (#4). Addition of dry polymer mixing system and two new storage tanks. Relocation of booster pumps and water heater. Replacement of sludge feed piping. Modify and rehabilitate the existing sludge conveyor and truck load-out system. A sludge pumping system is preferred to replace augers.

Rationale

These original control panels were installed in 1989 and are deteriorating, become obsolete. The rehab of belt press #2, the addition of a belt press, and the addition of polymer mixing and storage systems are to address deficiencies and the ability to have redundancy in the system. The booster pumps and water heater relocation are to move them to a more protected environment.

Project Title: SWWRF Oil Storage Building
Department: Public Works Projects
Project Mgr: Jim Renneberg
Infra. Sales Tax: -
Project #: PJ6017184
Status: Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: -
Project Need: Other

Project Location

District 4 5101 65th St W, Bradenton

Description and Scope

Modify existing Co-generation building where generator is housed for use as a new oil and waste oil storage area. Construct a new 30 feet x 40 feet metal building on north side of Co-generation building. Demolish existing oil storage and equipment storage areas adjacent to existing maintenance facility. Construct an approximately 60 feet x 40 feet pole barn with concrete floor next to maintenance facility after existing oil storage area and equipment storage area are demolished. Installation of two electric roll up garage doors on South side of Maintenance Building, replacing the current tall hinged doors (similar to roll up doors on Southeast Maintenance Building).

Rationale

To protect equipment from the elements. Current oil storage area and disposal station has poor cover, poor containment, and poor drainage.

Project #: PJ6036085
Status: Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: -
Project Need: Maintenance

Project Location

District 4 5101 65th St W, Bradenton

Description and Scope

Re-establish plant yard and swales to historical grades or grade per new design to convey stormwater to existing or new stormwater features for treatment and/or conveyance off site. Rehabilitate stormwater piping, inlets and outlets. Re-establish stormwater pond volumes, litoral zones and banks to historical or new permit conditions. Eliminate ponding in roads, yard and parking lots. Inspect North Lake toe drain and recommend maintenance. The boundaries of the project are the area inside and adjacent to the SWWRF fence including the Wastewater Laboratory. All permitting and modifications to the SWPPP are to be included.

Rationale

Over years of SWWRF operation numerous projects, traffic and natural weathering have changed the stormwater system, making it not as functional as it could be. This project is needed to restore the system's functionality, especially for summer weather events.

Category: Wastewater **Subcategory:** Wastewater Treatment
Project Title: SERWRF Third Sludge Holding Tank & Gravity Belt Thickener
Department: Public Works Projects
Project Mgr: Jim Renneberg
Infra. Sales Tax: -
Project #: PJ6041982 **Status:** Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes Project Need: Growth, Deficiency

Project Location

District 5 3331 Lena Rd, Bradenton

Description and Scope

Construction of a third sludge holding tank with associated aeration, sludge transfer capability, polymer system and other appurtenances. The repair/replacement of two existing gravity belt thickeners (GBT) is also included. Piping and controls shall also be added, so more than one GBT can operate at a time. Includes demolition of existing mixing/aeration systems in the existing two sludge holding tanks, and removal and disposal of solids from existing tanks. Alternate mixing/aeration is to be considered for the three tanks. Supervisory Control And Data Acquisition (SCADA) programming shall also be included.

Rationale

The Southeast Regional Water Reclamation Facility (SERWRF) service area continues to grow requiring additional sludge processing capability. Additionally, another sludge tank and Gravity Belt Thickener would allow for greater operational flexibility that is needed for maintenance, supplying the Biosolids Dryer and possibly deferring capital expense (by allowing operation at lower sludge ages decreasing oxygen requirements in the aeration basins).

Project #: PJ6042371
Status: Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: -
Project Need: Deficiency

Project Location

Countywide CountyWide

Description and Scope

Development of a centralized Supervisory Control And Data Acquisition (SCADA) platform and SCADA related networking and security services. Project shall include design and construction of the core SCADA infrastructure to support central application management and access.

Rationale

Provide centralized Supervisory Control And Data Acquisition (SCADA) management of SCADA system applications to reduce application maintenance and increase security and standardization.

Category: Wastewater **Subcategory:** Wastewater Treatment
Project Title: SWWRF Equalization System Rehabilitation & Cover Addition
Department: Public Works Projects
Project Mgr: Anthony Benitez
Infra. Sales Tax: -
Project #: PJ6071781 **Status:** Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: - Project Need: Maintenance

Project Location

District 4 5101 65th St W, Bradenton

Description and Scope

The project will include rehabilitation of the existing EQ tank. The rehabilitation will consist of performing structural improvements and a new interior coating system, replacing the pump recirculation system, and installing a new floating cover. It is anticipated that the air compressors for the new recirculation system can be located within the existing DAF Blower Building. Modifications to DAF building to house the new air compressors. Replace the existing return pump station with a new station including a permanent hoist for removing pumps. Supervisory Controls and Data Acquisition (SCADA) programming should also be included.

Rationale

The Flow Equalization (FEQ) tank receives and stores raw influent during the day and returns it to the plant at night to equalize the incoming flow. The FEQ tank cover is near the end of its life span, and it has proven difficult to keep the top of the cover clear of vegetation; settling solids are also an issue. A mixing system is required to keep solids in suspension, making it easier to pump them back to the plant. The existing FEQ return pump station has been in constant use for over 25 years and needs numerous upgrades or replacements. Also, the wet well for the pump station was modified for prior construction causing one of the pumps to be blocked from retrieval or repair. Power should be supplied per the electrical master plan to facilitate installation reliability and minimize possible rework.

Project Title: SWWRF Chlorine Contact Chamber Rehab & DIW Booster Station
Department: Public Works Projects
Project Mgr: Anthony Benitez
Infra. Sales Tax: -
Project #: PJ6091780 **Status:** Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: - Project Need: Maintenance

Project Location

District 3 11900 Cortez Rd W, Bradenton

Description and Scope

Install booster station with redundant pumps to deliver maximum flow at maximum pressure as permitted. All appurtenances are to be included such as flow metering, pressure monitoring, Supervisory Control and Data Acquisition (SCADA) telemetry/control, and surge valve control. Baffles or piping shall be added to stop lake water from short circuiting to the well. Remove old, unused gates and replace Chlorine Contact Chamber influent and effluent gates. Eliminate bypass channel and install pump system to drain Chlorine Contact Chambers for cleaning and maintenance. Inspect structures and walkways and repair as required. Build new Motor Control Center and Chlorine Contact Chamber mixing blower building close to the CCC/wetwell and demolish old buildings.

Rationale

Reclaimed water disposal may be increased in the rainy season. Maintenance events such as well acidation may be minimized. With more reliable reclaimed water disposal, may be able to dispose of less reclaimed water as it will be less risky to maintain higher inventories. Energy savings may occur due to not maintaining the whole reclaimed water system to a high pressure water disposal.

Project Title: Southwest Water Reclamation Facility Electrical Distribution System Rehab/Enhancement
Department: Public Works Projects
Project Mgr: Jim Renneberg
Infra. Sales Tax: -
Project #: PJ6101780 **Status:** Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: - Project Need: Maintenance

Project Location

District 4 5101 65th St W, Bradenton

Description and Scope

Replace/upgrade electrical distribution components to include air conditioning for electrical rooms, remove substations 1, 2, 9 & 10 replace motor control centers E1 & E2, replace switchboards 11 & 12, and replace main 5 kV switch gear, wiring, breakers and controls.

Rationale

Much of the equipment at the Southwest Water Reclamation Facility (SWWRF) is more than 25 years old, some is obsolete, and most is nearing the end of it's useful life. Each of these factors make the whole system inefficient and unreliable, and this rehabilitation will increase the safety and productivity at the SWWRF.

Category: Wastewater **Subcategory:** Wastewater Treatment
Project Title: SERWRF Capacity Improvements - Phases A & B
Department: Utilities
Project Mgr: Jim Renneberg
Infra. Sales Tax: -
Project #: PJ6106080 **Status:** Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes Project Need: Growth

Project Location

District 5 3331 Lena Road, Bradenton

Description and Scope

Considerable study revealed a more optimal pathway for this project. The passage of time and inflationary cost pressures of the past few years significantly increased the estimated cost as well. The project has been designed and is approaching the Guaranteed Maximum Price (GMP) phase with the selected Contract Manager At Risk (CMAR). A GMP proposal has been solicited for the first phase which will include the Headworks/Flow Splitter, improved aerators and related improvements. Construction of Phase 2 will follow in several years and will include additional Biological treatment units and other related work.

Rationale

The Southeast Regional Water Reclamation Facility (SERWRF) serves one of the fastest growing portions of Manatee County - it receives wastewater from Lakewood Ranch and adjacent new developments eastward south of the Manatee River. The existing facility is permitted for 11 Million Gallons per Day (MGD) but only has biological nutrient removal capacity to handle about 8 MGD. Flows are currently about 8 MGD and rising. The facility was also constructed in the mid 1980's and several processes and systems require refurbishment. To manage cash flow needs but to still have improvements online in time, the work needed to refurbish and expand the capacity of this facility has been divided into two subsequent phases.

Subcategory: Wastewater Treatment
Project Title: SEWRF Slide & Sluice Gates Replacement
Department: Public Works Projects
Project Mgr: Jim Renneberg
Infra. Sales Tax: -
Project #: PJ6110180
Status: Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: -
Project Need: Maintenance

Project Location

District 5 3331 Lena Rd, Bradenton

Description and Scope

This project has been included in the SEWRF Capacity Improvements Phase A project. Work includes replace underground chlorine feed pipelines with new dual wall pipelines, including leak detection system. Construct a containment curb around the sodium hypochlorite storage area in the existing chemical building. There Is also some yard piping associated with the containment curb in the chemical feed building.

Rationale

These sluice gates and slide gates were installed in 1989 or before and have exceeded their life expectancy. They are difficult if not impossible to exercise without breaking. These gates are necessary to allow operations to direct the flow of water to the appropriate system for treatment and to allow maintenance to direct the flow away from an area where they would need to work. They are critical to the operation and require ongoing maintenance.

Project #: PJ6110182 **Status:** Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: - Project Need: Deficiency

Project Location

District 5 3331 Lena Road, Bradenton

Description and Scope

Replacement of 1989-90 original 480V Electrical Switchgear M1 and M2 with new Switchgear at the Southeast Regional Water Reclamation Facility (SERWRF). Incorporate the Feeder Breakers into the M3 and M4 Switchgear lineup that were installed in 2000. Incorporate the Occupational Safety and Health Administration (OSHA) Arc Flash safety requirements into design.

Rationale

The original electrical equipment installed in 1989-90 is at the end of its useful life and is due for replacement per the Electrical Master Plan. There have also been numerous issues surfacing with the power distribution at the Plant because of the Tie Breaker that is obsolete. Capital Improvement Projects are more difficult to perform due to their connection to this obsolete and unsafe equipment.

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: -
Project Need: Maintenance

Project Location

District 5 3331 Lena Rd, Bradenton

Description and Scope

Clarifiers 1 and 2: Re-grout clarifier floors. Replace rakes, sludge box and draft tubes with spiral rake systems. Additionally, replace weirs, stilling baffle, stilling well and skimmers. Install stamford baffles. Re-coat interior clarifier parts and structure. Paint exterior.

Rationale

Some of this equipment will be thirty plus years old. Replacing it will minimize unplanned failure necessitating unplanned spending and possible avoidance of Florida Department of Environmental Protection (FDEP) noncompliance. Stamford baffles will improve clarifier performance, which will improve filter/plant performance.

Category: Wastewater
Subcategory: Wastewater Treatment
Project Title: SWWRF Second Cloth Filter
Department: Public Works Projects
Project Mgr: Albert Rosenstein
Infra. Sales Tax: -
Project #: PJ6110780
Status: Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: Yes
Project Need: Growth, Deficiency

Project Location

District 4 5101 65th St W, Bradenton

Description and Scope

Convert one existing sand filter to a cloth filter. This will include demolition of the existing sand filter components, installation of the equipment needed for the new cloth filter, and any modifications in piping and channels to ensure proper distribution of water between filters and chlorine contact chambers. Supervisory Control and Data Acquisition (SCADA) modifications will be included. Provide canopy over Automatic Back Wash filters including hoists and trolleys for removal of filter equipment. The filters shall be able to be drained through connection to the plant drain.

Rationale

The County's engineer of record in the wastewater plant's master planning effort identified a deficit in the plant's effluent filtering capacity. Basically, with the existing cloth filter down there is not enough filter capacity to handle wet weather peaks, which is not compatible with Class 1 Reliability, which is a condition of our Florida Department of Environmental Protection (FDEP) operating permit. Replacing a sand filter with a cloth filter will increase filtering capacity, which will make the plant Class 1 Reliable, will minimize risk of contaminating the reclaimed water storage lakes, and will minimize risk of possible off specification effluent discharge. In addition, Filters #1 and #2 are not capable of being fully drained. This project is necessary for permitting the plant to 18 million gallons a day (mgd), annual average daily flow.

Category: Wastewater **Subcategory:** Wastewater Treatment
Project Title: Southwest Water Reclamation Facility Rehab Storage Pond Stations,Lake Filter Pump,Backwash Diversion
Department: Public Works Projects
Project Mgr: Jim Renneberg
Infra. Sales Tax: -
Project #: PJ6110781 **Status:** Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: - Project Need: Maintenance

Project Location

District 4 5101 65th St W, Bradenton

Description and Scope

Inspect the structures for Lake stations #1, #3 and the North Lake. Demo station #2 and grout fill piping as needed. Evaluate pump curves and sizes for the current use and demand of the lake return system, including individual station lake recirculations. Replace all electrical components, panels, and add variable frequency drives to the station pumps and pest deterrents to the electrical enclosures. Add magnetic flow meters and ensure good communication with the SCADA system. Modify existing piping to redirect lake filter backwash to the 54 inch line between the wetwell and Middle Lake. SCADA programming shall be included in the project.

Rationale

These stations were built around 2000 and the equipment is showing its age. In addition to the age the stations were engineered and built to be used in a different way with a different process. Re-evaluating its current use and demand may change how many stations we need and what they are designed to do. The lake filter effluent may be put directly in the 10 MG storage tanks, which may potentially simplify operation of the recharge well. Sending backwash back to the lake minimizes plant throughput.

Category: Wastewater **Subcategory:** Wastewater Treatment
Project Title: Southwest Water Reclamation Facility Expansion to 18 MGD
Department: Utilities
Project Mgr: Jim Renneberg
Infra. Sales Tax: -
Project #: PJ6110783 **Status:** Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes Project Need: Growth, Deficiency

Project Location

District 4 5101 65th Street West, Bradenton

Description and Scope

The SWWRF expansion will address several components of the treatment plant to provide enhanced biological treatment as well as increase hydraulic capacity of those processes. The improvements will include: flow splitter box improvements, rerouting internal recycle, equalization tank and pump station improvements, Modified Ludzack-Ettinger (MLE) process improvements including addition of a swing zone in the anoxic tanks, simultaneous nitrification – denitrification (SND) with ammonia based aeration control (ABAC), Return Activated Sludge (RAS)/Waste-Activated Sludge (WAS) piping improvements, installation of up to 3 MGD of Aerobic Granular Sludge (AGS) treatment system on the north side of the plant with new feed pump station, turbo blowers and buffer tanks, filter improvements including conversion to cloth media, new chemical storage and feed system adjacent to the filters, capacity improvements to the effluent pump station, electrical system improvements to support the plant modifications, standby power improvements, upgrades to the associated instrumentation and Supervisory Control and Data Acquisition (SCADA) systems to include process monitoring and control and network system improvements to support the plant improvements.

Rationale

Influent flows and loadings have increased at an accelerated rate over the past several years and the Southwest Water Reclamation Facility (SWWRF) is nearing its Average Annual Daily Flow (AADF) capacity. The expansion will provide the necessary improvements to expand facility capacity to 18 Million Gallons per Day (MGD) AADF.

Description and Scope

Replace the secondary clarifier confluence box "The Missile", at the Southwest Water Reclamation Facility (SWWRF). All required bypassing shall be included.

Rationale

The existing confluence box needs to be replaced to eliminate operational risk. Some years ago it had to be weighed down with supplemental concrete. Its underground condition is unknown and its inspection is problematic. Its above ground appurtenances are degraded.

Department: Public Works Projects
Project Mgr: Anthony Benitez
Infra. Sales Tax: -
Project #: PJ6110785 **Status:** Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: - Project Need: Deficiency

Project Location

District 4 5101 65th Street West, Bradenton

Description and Scope

Design and construct a new plant drain station and associated piping. Near the existing station with interconnection between the old and new station. Replace/upsize piping from the drain stations to the headworks and provide for energy dissipation of flow emanating from the filter backwash. Project includes all necessary electrical instrument and control work.

Rationale

This will add reliability of Southwest Water Reclamation Facility (SWWRF) drain station function and decrease the probability of sanitary sewer overflows during storm events. The drain station piping to the headworks needs replacement for age and capacity. Filter backwash into the existing drain station causes station wear.

Project Location

District 1 8500 69th St E, Palmetto

Description and Scope

Build a 58 feet x 38 feet metal maintenance building where the existing concrete slab is that was used for the Everfilt filters adjacent to the existing maintenance building. The building is to be outfitted to be used as a mechanical and electrical shop.

Rationale

With the expansion of the North Water Reclamation Facility (NWRF) and all the new equipment being added, there is a need for a bigger work shop for the electrical team and mechanical team. There is also an expanding inventory with the growth of NWRF. The existing 42 feet x 32 feet parts, tool, electrical and mechanical shop is getting crowded and in need of a bigger work shop.

Project Need: Growth

Project Location

District 1 8500 69th Street East, Palmetto

Description and Scope

As a result of lab testing conducted and operational changes implemented at the plant a revised scope (not utilizing Nuvoda process) was deemed necessary. This project will now include Return Activated Sludge System evaluation and improvements to meet required flow rates. The work may include upgrading or replacement of pumps, hydraulic assessment and improvements of the RAS system (piping modifications to the new headworks). Waste Activated Sludge Pump Station upgrades to include valve and pump replacement. The required electrical and I &C improvements to be included also. These improvements will enhance the RAS and WAS system reliability and operator efficiency.

Rationale

These improvements should assist with plant operation and provide much needed improvements in advance of the plant expansion from 7.5 MGD to 9.5 MGD.

FY2026 - FY2030

Category: Wastewater
Subcategory: Wastewater Treatment
Project Title: SERWRF Dryer Building Improvements
Department: Public Works Projects
Project Mgr: Tom Yarger
Infra. Sales Tax: -
Project #: PJ6114180
Status: Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: -
Project Need: Deficiency

Project Location

District 5 3331 Lena Rd, Bradenton

Description and Scope

Add additional space onto the north side of the dryer building to accommodate an operations room, administration office, supply room and employee shower. Include new Heating, Ventilation, and Air Conditioning (HVAC) in the Motor Control Center (MCC) room.

Rationale

More space is needed at the Biosolids Dryer. Currently, operating supplies are stored in its Motor Control Center (MCC). The facility also lacks shower facilities. Space needs to be added to the Dryer as the Southeast Regional Water Reclamation Facility (SERWRF) Administration Building is already fully utilized, and the SERWRF Maintenance Building is remote from the Dryer, and not always manned concurrent with the Dryer. Additionally, the Dryer MCC needs a new HVAC unit.

Category: Wastewater **Subcategory:** Wastewater Treatment
Project Title: SERWRF - Capacity Improvements Phase C
Department: Utilities
Project Mgr: Jim Renneberg
Infra. Sales Tax: -
Project #: PJTP26024 **Status:** Requested

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: No Project Need: Growth

Project Location

District 5 3331 Lena Road, Bradenton

Description and Scope

The SEWRF Capacity Improvements Project (Phase "C") is designed to enhance the biological treatment and increase the hydraulic capacity to 14MGD AADF. While the ongoing CMAR project addresses critical capacity improvements, value engineering efforts identified additional work that could be deferred and is now incorporated into this CIP project. This project ensures that all treatment processes align with the required 14MGD AADF capacity by upgrading essential components, including Headworks, Equalization Return Pumps, Enhancements to the Biological Treatment Processes, and additional Reject Storage Capacity.

By implementing these improvements, the county aims to optimize wastewater treatment efficiency while maintaining compliance and regulatory standards and protecting environmental quality. The addition of AquaDimond filtration systems, a new Sodium Hypochlorite Building, and Screening and Grit Removal equipment further strengthens system reliability. These upgrades are crucial for sustaining Manatee County's wastewater management infrastructure, safeguarding public health, and ensuring long-term environmental stewardship.

Rationale

The ongoing CMAR capacity improvements project for SERWRF is a critical initiative aimed at enhancing wastewater treatment infrastructure to support public health, regulatory compliance, and environmental sustainability in Manatee County. By upgrading Headworks, Equalization Return Pumps, and enhancements to the biological processes, the project ensures improved efficiency in handling increased wastewater loading. The installation of AquaDiamond filters, a new sodium hypochlorite facility with expanded storage, and 4 new pump skids. An 8MG reject storage pond with a Return Pump Station including all yard piping to insure that we meet request requirements.

This Capacity Expansion Phase ""C"" CIP addresses deferred improvements, including the addition of screening and grit removal equipment at the new Headworks, to further optimize operations and protect equipment. These enhancements are essential in mitigating potential environmental risks and ensuring the safety and well-being of Manatee County residents. By implementing these upgrades, the project promotes sustainable water management practices, reinforcing the county's commitment to public health and environmental stewardship.

Project Title: SERWRF - New Central Laboratory
Department: Public Works Projects
Project Mgr: Jim Renneberg
Infra. Sales Tax: -
Project #: PJWW01934
Status: Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: -
Project Need: Deficiency

Project Location

District 5 3331 Lena Road, Bradenton

Description and Scope

New Wastewater Central Laboratory of approximately 12,000 square feet. The new laboratory shall include copy supply room, Uninterrupted Power System (UPS) and utilities room, data storage room, network room, four regular offices, a fiscal specialist office near main entrance, office area for eight others, conference room, lockers and bathrooms, break/lunch room, sample receiving and cooler room, and Deionized (DI) water and supply room. Additionally, it will include areas for wet chemistry, microbiology, metals digestion, metals instrumentation, Biochemical Oxygen Demand (BOD), general analytical (nutrients), nutrient digestion, oil and grease, volatiles, semi-volatiles, and spare analytical area. Facility shall also include a parking area, an emergency generator, vacuum pumps and hazardous waste storage.

Rationale

A new laboratory is required as the existing one is not large enough to handle all samples that it is getting. This will only get worse from continued growth, requiring additional sample storage presumably outside the existing laboratory. It will also require more use of contract laboratory work.

Project #: PJWW01936
Status: Existing

Comprehensive Plan Information

CIE Project: -
LOS/Concurrency: -
Project Need: Deficiency

Project Location

District 4 5101 65th Street West, Bradenton

Description and Scope

Replace digester sludge transfer pumps and piping in the digester building. Remove old piping that is no longer in use. Remove recirculation pumps as they are no longer in use. Replace room ventilation fans. Replace all lighting with Low Energy Downlights (LEDs). Make needed repairs to walls, ceiling, and floor in this room. Paint walls, ceiling and floor. Paint and label piping. Replace current auger system at the belt filter presses with a pumping system. Replace Motor Control Center (MCC's) D1 and D2, and air condition them. Replace associated panel boards and transformer. Replace street lighting in the area. Supervisory Control And Data Acquisition (SCADA) programming is to be included.

Rationale

The digester sludge transfer pumps are due for replacement. Their pump efficiency has diminished over the years. The recirculation pumps are no longer in use and therefore no longer needed. The current auger system for the belt filter press has many moving parts which fail often and require a lot of maintenance. A pumping system would eliminate some of the issues and allow for a better, more uniform filling of the trailers. MCCs D1 and D2 are not in a climate controlled room and are difficult to make any improvements or changes to due to them being upstairs. Moving them downstairs and installing climate control will allow better operation ability and upgradability for future installations, as well as improve maintenance and the life cycle of the equipment.

Project Title: North Regional Water Reclamation Facility Expansion 12.5 MGD
Department: Utilities
Project Mgr: Jim Renneberg
Infra. Sales Tax: -
Project #: PJWW02247 **Status:** Existing

Comprehensive Plan Information

CIE Project: Yes
LOS/Concurrency: Yes Project Need: Growth, Deficiency

Project Location

District 1 North Regional WRF 8494 69th St E Palmetto, FL 34221

Description and Scope

This project will result in a 5 MGD expansion to the NRWRF. The north service area has a comp plan level of service of 80 gpd/capita. With the recent census, occupancy for Manatee County was found to be about 2.5 people per household, therefore, that translates to 200 gpd per Equipment Residential Unit (ERU). Since the NRWRF has about 2.5 MGD of capacity unused, it can support another 12,500 ERUs before reaching capacity. The numerous developments approved in this service area collectively will exceed that capability without additional treatment capacity being brought online. Adding 5 MGD extends the facility by another 25,000 ERUs. Includes replacement of all obsolete/unreliable electrical equipment identified in WW01931:- MCC's, Main Switch Gear, Transformers, Generator and Panelboards/Panels.

Rationale

The North Regional Water Reclamation Facility (NRWRF) has a permitted capacity of 7.5 million gallons per day (MGD) based on the 3-month, rolling average flow. Recent flows have exceeded 5 MGD based on the 3-month rolling average, so we are closing in on 70% of capacity. This wastewater collection area includes the fast-developing Parrish area between I-75 and US 301 and bounded by Erie Rd to the south and Buckeye Rd to the north. This project will expand the rated capacity of the facility to 12.5 MGD to accommodate growth.

Appendix I - Projects of Record

MANATEE COUNTY GOVERNMENT
FY26-30 Adopted Capital Improvement Plan
Projects of Record

Buildings & Renovations

Project Count	Project		Amount	District
1	Convention Center Parking Garage	Design, engineer, and construct a new aesthetically pleasing multi-story parking structure with +/- 300 parking spaces. The structure would be ADA compliant and include but is not limited to: signage, striping, cameras, interior and exterior lighting, elevators, stairs, lightning protection, loading docks and retail frontage space for shops. Site design and permitting along with related appurtenances to provide a complete facility is required.	20,567,677	1
2	Fleet Main Workshop Facility and Administration Office Renovation	This project will provide for a full renovation / replacement of the main Fleet Maintenance Facility and Fleet Administration Offices located at 1100 26th Ave East, Bradenton Florida, 34208. The original building built in the 1960's requires substantial repairs and upgrades to modernize the aging / failing structural, electrical, plumbing, and fire protection. All the equipment lift, hoists, environmental recovery systems, and safety systems are at the end of useful life cycle. The building was evaluated by an engineer August 20, 2020 and the report indicated the building is in poor condition and will require complete renovation within 2 years. The current building has no space to expand work areas to provide a higher level of customer service, and the space required to diagnose and repair modern equipment. Pricing opinion includes complete replacement of the current 10 bays, with the addition of 10 bays to expand asset service repair work and maintenance, fleet administration offices, and to be built in parallel with the current building so we do not have any service level interruptions.	10,000,000	2
3	Judicial Center LED Lighting Retrofit	Converting the lighting to super efficient mercury free LED bulbs will reduce energy consumption and curb maintenance costs.	900,000	3
4	Premier Campus Parking Garage	Design and construct a new ADA compliant aesthetically pleasing multi-story (up to 5 levels) parking garage which will accommodate 500 +/- parking spaces to serve the planned construction per the general development plan and the existing library. The parking garage will be equipped, with exterior and interior lighting, signage, striping, stairs, elevators, security cameras and lightning protection. Site design and permitting along with related appurtenances to provide a complete facility is required.	38,757,500	5
4	PSC Building Mechanical and Electrical System Redundancy	Critical need for redundancy and reliability of heating, ventilation, and air conditioning in the Public Safety Complex Critical Data Rooms.	925,000	2
5	Public Works Foreman's lean to/warehouse/maintenance area replacement	Replace the existing facility located behind the foreman's section of the Public Works administration building complex.	1,187,000	2
6	Public Works Storage Shed Replacement 26th Avenue East	Total replacement of the Field Maintenance storage shed. Asset is beyond useful life and is uneconomical to repair.	750,000	2
7	Public Works Supply Warehouse and Fuel Administration Office	This project will provide for a full renovation / replacement of the Public Works Supply Warehouse and Fuel Services offices located at 2908 12th Street Court, Bradenton Florida, 34208. The original building built in the 1980's requires substantial repairs and upgrades to modernize the aging / failing structural, electrical, plumbing, and fire protection. All the equipment and safety systems are at the end of useful life cycle. The building was evaluated by an engineer August 20, 2020 and the report indicated the building is in poor condition and will require complete renovation or will soon be non-occupiable. The current building has no space to expand work areas to provide a higher level of customer service. Pricing opinion includes complete replacement of the current building.	2,500,000	2
8	Public Works Tile Yard Replacement Building	Replacement of the road maintenance storage shed at 26th Ave E. The storage facility incurred damaged from the no name storm in 2017.	200,000	2
		Buildings & Renovations Total Amount	**$ 75,787,177**

Sports & Leisure Projects

Project Count	Project		Amount	District
1	G.T. Bray Park Improve Trail System	Add outdoor lighting along the trail path of GT Bray as well as signage and fixed exercise equipment.	250,000	3
2	G.T. Bray Park Relocate Outdoor Basketball Court with Light	The new basketball court will be located adjacent to the new skate park. This will allow us to utilize the existing slab. We will construct one full sized basketball court, with fencing and lights that will be open, free to the public.	156,079	3
3	GT Bray Park Renovate T-Ball & Add Baseball Fields	Renovate and expand the two t-ball fields into little league fields to accommodate more users. Cost TBD.	TBD	3
4	Greenbrook Park Parking Lot Install	Install parking lot.	100,000	5
5	Lakewood Ranch Park Restroom and Water Fountain for Pickleball/Tennis	Construction of an ADA restroom facility, including sufficiently sized male, female and family facility and a chilled water fountain, within the LWR Tennis/Pickleball area. Investigation into factory built and delivered modular rest-room facilities should be investigated for cost savings.	749,000	5
6	Lakewood Ranch Park Updates - Trail Improvements	Create new and improve on existing paths between the baseball and softball complexes as well as the path to the playground. Create a full path around the soccer and football fields along the permitter. This would require grading and leveling of selected areas, then fill in for a ADA complaint pathway. Consider asphalt like GT Bray. Consider any drainage or irrigation concerns with this construction.	1,398,760	5
7	Premier Sports Complex - Clay Tennis Courts	Build clay tennis courts including subsurface irrigation, lighting, fencing, seating, sidewalks, water fountains, landscaping, FFE. Construct a practice wall and maintenance shed.	4,736,000	5
8	Premier Sports Complex - Hard Tennis Courts	Build hard covered tennis courts with lighting, fencing, seating, sidewalks, water fountains, landscaping and FF&E. The shade structure should include lighting and fans.	1,832,500	5
9	Premier Sports Recreation Administration Building and Gymnasium	Construct up to a 5 court gymnasium, hardened for hurricane protection. Include restrooms, locker rooms, showers, IT support, office capable of holding up to 10 staff members, basketball hoops, score boards, generators - all dependent on the stipulations for the hurricane grant.	35,900,000	5
10	Pride Park	Trail Expansion.	200,000	2
		Sports & Leisure Total Amount $	**45,322,339**	

Public Safety

Project Count	Project		Amount	District
1	MCSO - District 3 Substation	The growth in the eastern and northern portions of Manatee County has been non-stop and calls for service in these areas continue to rise on a yearly basis due to said growth. The MCSO presently have no hardened buildings that are hurricane rated that can be occupied safely by personnel who are required to work during a hurricane event. The building of a 20,000 sq ft substation in the Parrish area will be of great service to the citizens who reside and work in that area of the county. A new hardened office location in that area of the county would provide a safe haven during a hurricane event as well. This scope also includes all FF&E and appurtenances for the project.	16,025,250	5
2	Old Jail Remodel	To design/renovate/construct for transitional VA housing.	2,000,000	3
		Public Safety Total Amount $	**18,025,250**	

MANATEE COUNTY GOVERNMENT
FY26-30 Adopted Capital Improvement Plan
Projects of Record

Transportation

Project Count	Project		Amount	District
1	1st Ave E from 17th St E to North DE	Construct five foot sidewalk along with drainage improvement to accommodate sidewalk installation.	547,000	2
2	14th St W - 26th Ave W to 39th Ave W	Construct pedestrian crossings.	130,000	3
3	15th St E - 38th Ave E	Construct signal and turn lane improvements.	385,418	2
4	15th St E (301 Blvd) - Tallevast Rd to 1st St (US 41)	Construct a three lane roadway with bike lanes and sidewalks.	63,000,000	Multi-District
5	17th Avenue NW Complete Street - 99th St NW to 83rd St NW	Construct two mini-roundabouts at 83rd Street NW and 91st Street NW, provide raised pedestrian crossings at critical locations, and completing the sidewalk network on 17th Avenue NW.	6,445,000	3
6	18th St W - Cortez Rd to 38th Ave	Construct sidewalk on east side.	36,900	4
7	21st St W & E from 4th Ave W to US 41	Construct five foot sidewalk along with drainage improvement to accommodate sidewalk installation.	319,000	2
8	24th Ave - US 301 to 29th St	Construct a new two lane road.	12,182,882	2
9	26th St W at Bayshore Gardens Pkwy	Add turn lane(s).	654,000	4
10	26th Ave E - 15th St E to 45th St E	Widen roadway to 24 feet and resurface over entire width. Construct closed drainage and re-grade to provide 8 feet shoulders.	3,500,000	2
11	26th St W - 9th Ave W	Extend left turn lanes and add right turn lanes.	1,242,246	3
12	26th St W at 57th Ave W	Upgrade to mast-arm supports and add turn lane(s).	1,599,000	4
13	26th St W at Cortez Ave Intersection Improvement Project	Analyze the intersection and determine the recommended improvements for the intersection. The analysis should include FDOT coordination/ICE, pedestrian movements and safety, and future growth from anticipated developments. Evaluate additional left turn lanes (dual left turn lanes) and right turn lanes for both northbound and southbound. Turn lane length and signal timing should also be considered. Design, permit, and construct the recommended improvements. Replace/update traffic signal as needed to accommodate the improvements. Project will likely require right-of-way acquisition.	3,293,708	3
14	27th St E - 13th Ave E to 26th Ave E	Reconstruct and widen from 2 lanes to 4 lanes.	16,748,517	2
15	27th St E - 9th Ave E	Construct separate left-turn lane on all approaches.	523,617	2
16	27th Street E - 26th Avenue E / 38th Avenue E	Reconstruction & widening from 2 to 4 lanes with pedestrian & bicycle facilities and roadway lighting. To provide capacity for existing traffic and planned growth and to update the typical section to be consistent with throughfare standards.	12,209,918	2
17	27th Street E - SR64 / 13th Avenue E	Reconstruction & widening from 2 to 4 lanes with pedestrian & bicycle facilities and roadway lighting. To provide capacity for existing traffic and planned growth and to update the typical section to be consistent with throughfare standards.	9,292,798	2
18	27th St E - SR 64 - 20th Ave E Rebase and Resurfacing	This project encompasses design, bidding and construction of a 5,300 LF of roadway base, asphalt surfacing and repair sidewalks and curbing.	1,223,500	2

MANATEE COUNTY GOVERNMENT
FY26-30 Adopted Capital Improvement Plan
Projects of Record

Transportation

Project Count	Project		Amount	District
19	27th Street East - SR 64 to 26th Avenue East	Reconstruct road base and resurface with asphalt from SR 64 to 26th Avenue East. Make sidewalk repairs at selected locations. (1.31 centerline miles). 27th St E that connects to SR 64 on the north and 38th Ave E on the south is a heavily travelled road that is in poor condition and services neighborhoods, schools, a golf course, and the Pirate City Spring Training Baseball Complex. The road has deteriorated to an extent that a simple mill & resurface project would not be adequate to rehabilitate the section; therefore, this project encompasses reconstructing the base and then resurfacing with 2" structural asphalt and 1" of friction course asphalt. As this road also has sidewalk, the project would make repairs in various locations to cracked and/or shattered slabs. Pedestrian striping enhancements would also be made. This estimate includes design, preconstruction services, materials testing, and construction utilizing CMAR.	3,261,000	2
20	301 Blvd from Tallevast Rd to University Pkwy	Add sidewalk on west side. Complete sidewalk gaps on east side.	643,000	4
21	30th Ave E from 9th St E to 15th St E	Reconstruct existing two lane road to include standard lane widths, pedestrian & bicycle facilities, and lighting.	5,189,000	2
22	35th St W from 9th Ave W to 13th Ave W	Add sidewalk on one side.	103,000	3
23	37th St E - 38th Ave E - SR 70	Reconstruct existing two lane road to include standard lane widths, pedestrian & bicycle facilities, and lighting.	12,971,000	4
24	37th Street E (Mendoza Rd) - 69th St E to Victory Rd Sidewalk	Design and construct a sidewalk including drainage, driveways and ADA curb ramps.	576,800	1
25	43rd St W at 9th Ave W	Upgrade to mast-arm supports and add right turn lane.	449,000	3
26	43rd St W from 36th Ave W to 9th Ave W	To meet current design standards for thoroughfare roadways. Reconstruct existing two lane road to include standard lane widths, pedestrian & bicycle facilities, and lighting.	15,876,000	3
27	43rd St W from Cortez Rd to 53rd Ave W	Reconstruct existing two lane road to include standard lane widths, pedestrian & bicycle facilities, and lighting.	11,207,000	Multi-District
28	44th Ave E at Uihlein Road Intersection Improvements	Design, permit, and install traffic signals with mast arm assemblies and associated pedestrian crossings for all legs. In addition, install non-intrusive detection system, CCTV cameras, MVDS, and install fiber-optic connection from 44th Ave E (at Asolo Blvd) to Uihlein Road. Two thoroughfares, 44th Ave E and Uihlein Road, are four-lane divided roadways classified as arterial and collector, respectively, in the County's Comprehensive Plan. The intersection of 44th Ave E and Uihlein Road currently operates as an all-way stop control. With 44th Ave E extending to Bourneside Boulevard, Uihlein Road connecting two major state roads (SR 64 & SR 70), and with major developments near this intersection, there has been a steady growth of traffic in the area that is expected to continue. Staff recommends installation of a traffic signal at this intersection. The traffic signal is expected to improve the overall operations and safety for all users. In addition, staff also recommends including Advanced Traffic Management Systems (ATMS) infrastructure such as fiber, CCTV cameras Microwave Vehicle Detection Systems to provide connection to the Traffic Management Center (TMC) to improve operational and monitoring capabilities.	2,405,700	5
29	45th St E from 44th Ave E to 26th Ave E	Reconstruct existing two lane road to include standard lane widths, pedestrian & bicycle facilities, and lighting.	10,377,000	Multi-District
30	45th St E from 4th Ave E to End of Street	Road drainage and add sidewalk on one side.	173,000	2

MANATEE COUNTY GOVERNMENT
FY26-30 Adopted Capital Improvement Plan
Projects of Record

Transportation

Project Count	Project		Amount	District
31	49th St E (Experimental Farm Rd) over Terra Ceia Creek Bridge Replacement	Design and construct a new bridge to replace the existing bridge on Experimental Farms Rd (49th St E) over Terra Ceia Creek. The current 2 lane bridge will maintain 2 lanes while improving shoulder widths and providing sidewalks allowing for bicycle and pedestrian traffic to improve safety. The alignment is also to be adjusted north to maintain the parallel channel to the south. The estimated dimensions of the new bridge are approximately 40 ft. long x 50 ft. - 8 in. wide. Permitting and right-of-way costs will be included as part of the project costs.	2,836,355	1
32	4th Ave E from 45th St E to 49th St E	Road drainage and add sidewalk on one side.	200,000	1
33	51st Ave E from US 301 to 33rd ST E	Reconstruct existing two lane road to include standard lane widths, pedestrian & bicycle facilities, and lighting.	5,500,000	2
34	51st St W - 53rd Ave W	Construct southbound left turn lane.	543,300	4
35	51st Street W - El Conquistador Pkwy to 53rd Avenue E	Design, permit, and construct the outside two lanes of a future four-lane divided thoroughfare extension of 51st St W from El Conquistador Pkwy to 53rd Ave E. Project to include associated intersection improvements at 53rd Ave W and El Conquistador Pkwy, and land acquisition to accommodate the road extension. The County's 2045 Traffic Circulation Functional Classification (Map 5-B) identifies 51st St W road as a proposed collector thoroughfare from El Conquistador Pkwy to 53rd Ave W. Due to future anticipated growth in the surrounding area, traffic demand is expected to increase. The project expected to support the County's economic development and revitalization goals for the area while providing increase roadway capacity and connectivity to employment centers, educational opportunities, tourism destinations, sport performance venues, and beach resorts.	21,100,000	4
36	51st St W at Cortez Ave Intersection Improvement Project	Analyze the intersection and determine the recommended improvements for the intersection. The analysis should include FDOT coordination/ICE, pedestrian movements and safety, and future growth from anticipated developments. Evaluate additional left turn lanes (dual left turn lanes) and right turn lanes for both northbound and southbound. Improving the offset for the east-west left turns should also be evaluated. Turn lane length and signal timing should also be considered. Design, permit, and construct the recommended improvements. Replace/update traffic signal as needed to accommodate the improvements. Project will likely require right-of-way acquisition.	3,517,865	Multi-District
37	51st St W from 21st Ave W to Cortez Rd	Reconstruct an existing two lane road to include standard lane widths, pedestrian & bicycle facilities, and lighting.	13,386,000	3
38	51st St W from 32nd Ave Dr W to 26th Ave W	Add sidewalk on one side.	163,000	3
39	51st St W from 47th Ave W to Cortez Rd	Add sidewalk on one side.	143,000	3
40	53 Ave W from 26 ST W to 30 ST W	Upgrade road to current standards for travel lanes, sidewalks, bike lanes (or trail), and lighting.	3,743,000	4
41	53rd Ave W - 20th St W	Upgrade to mast arm support and construct right-turn lane on westbound approach.	533,996	4
42	53rd Ave W at 34th St W	Upgrade to mast arm support, construct right-turn lane on westbound approach, and left turn lane on eastbound approach.	1,645,000	4
43	53rd Ave W from 25th St W to US 41	Add sidewalk on one side.	282,000	4
44	53rd Ave W from US 41 to 26th St W	Reconstruct existing four lane road to include standard lane widths, pedestrian and bicycle facilities and lighting.	10,797,000	4
45	55th Ave W from 26th St W to US 41	Road drainage and add sidewalk on one side.	556,000	4
46	59th St W - Riverview Blvd. - Manatee Ave W	Reconstruct existing two-lane road to include standard lane widths, pedestrian and bicycle facilities.	10,169,000	3

MANATEE COUNTY GOVERNMENT

Transportation

Project Count	Project		Amount	District
47	5th Street E - 32nd Ave E to 22nd Terrace E Sidewalk	Design and construct a sidewalk including drainage, driveways and ADA curb ramps.	333,200	2
48	61st E Palmview from Country Lakes Blvd to Bayshore Rd Sidewalk	Design and construct a sidewalk including drainage, driveways and ADA curb ramps.	286,800	3
49	61st St E from Bayshore Rd to 16th Ave E	Construct five foot sidewalk along with drainage improvement to accommodate sidewalk installation.	759,486	3
50	63rd Avenue E from Tuttle Avenue to Lockwood Ridge Rd	Widen from 2 to 4 lanes with bike lane, sidewalks and lighting (1.1mi).	11,000,000	4
51	69th Ave E (Whitfield Ave) over Pearce Canal Bridge Replacement	Design and construct a new bridge to replace the existing bridge on Whitfield Ave (69the Ave E) over Pearce Canal. The current 2 lane bridge will maintain 2 lanes while improving shoulder widths and allow for bicycle and pedestrian traffic to improve safety. The estimated dimensions of the new bridge are approximately 60 ft. long x 50 ft. - 8 in. wide. Permitting and right-of-way costs will be included as part of the project costs.	2,497,564	4
52	69th Ave West (Bay Dr.) from American Way to US 41 Sidewalk	Design and construct a sidewalk including drainage, driveways and ADA curb ramps. The project may be constructed in phases due to potential utility conflicts and permitting on the west side of the project.	280,000	4
53	69th St - Erie Rd - US 41 to US 301	Widen from two lanes to four lanes.	54,584,453	1
54	69th St E at 51st Ave E Intersection Improvements	Design, permit, and install traffic signals with mast arm assemblies and associated pedestrian crossings for all legs. Evaluate, design, permit, and construct turn lane improvements (adding or extending), as needed. In addition, install non-intrusive detection system, CCTV cameras, MVDS, and install fiber-optic connection from Buffalo Road to 51st Ave E. The 69th St E and 51st Ave E intersection, is located in area of the County that is experiencing rapid growth and traffic demand. The northbound and southbound approaches (51st Ave E and 47th Ave E, respectively) are stop-controlled. With expected increase in traffic, road users on these approaches will experience increasingly higher delays. Installation of a traffic signal along with pedestrian crossing features is recommended to alleviate the problem. The traffic signal is expected to improve the overall operations and safety for all users. In addition, staff also recommends providing Advanced Traffic Management Systems (ATMS) infrastructure such as fiber-optics, CCTV cameras, and Microwave Vehicle Detection Systems (MVDS) to provide connection to the Traffic Management Center (TMC) to improve operational and monitoring capabilities.	2,334,000	1
55	69th Street E - US 41 / Ellenton Gillette Rd	Reconstruction & widening from 2 to 4 lanes with pedestrian & bicycle facilities and roadway lighting. To provide capacity for existing traffic and planned growth and to update the typical section to be consistent with throughfare standards. This project includes IST Project TRRI017.	13,817,034	Multi-District
56	69th St E from Ellenton-Gillette to I-75	Reconstruct existing two lane road to include standard lane widths, pedestrian & bicycle facilities, and lighting.	8,405,000	1
57	75th St W at Cortez Ave Intersection Improvement Project	Analyze the intersection and determine the recommended improvements for the intersection. The analysis should include FDOT coordination/ICE, pedestrian movements and safety, and future growth from anticipated developments. Evaluate additional left turn lanes (dual left turn lanes) and right turn lanes for both northbound and southbound. Turn lane length and signal timing should also be considered. Design, permit, and construct the recommended improvements. Replace/update traffic signal as needed to accommodate the improvements. Project will likely require right-of-way acquisition.	2,829,735	Multi-District
58	80th Ave Cir E from 55th St E to 55th St E	Add sidewalk on one side.	112,000	1
59	9th Ave W - 51st St W Intersection	Install traffic signal.	250,000	3
60	9th St E - 37th Ave E Intersection	Install traffic signal.	328,358	3

Transportation

Project Count	Project		Amount	District
61	9th St E - US 301	Construct a new sidewalk.	TBD	Multi-District
62	9th St E at 30th Ave E	Upgrade to mast-arm supports and add right turn lanes on all four approaches.	2,000,000	2
63	9th St W - Cortez Rd to 301 Blvd	Construct a sidewalk on east side.	102,200	Multi-District
64	9th St W at 30th Ave W	Upgrade to mast-arm supports and add turn lanes on all four approaches.	2,500,000	2
65	9th Street East Rebase and Resurfacing CIP	Re-base large sections of 9th Street East from US 301 to 9th Ave East.	1,870,348	2
66	Advanced Traffic Management System(ATMS) Countywide	Countywide construction of ATMS infrastructure.	500,000/year	Countywide
67	Baywalk Trail from USF/Crosley	Construct trail from USF to Crosley, (North/South).	150,000	4
68	Bicycle System Improvements Countywide	Placing of bike racks and route signs throughout the county where needed.	100,000/year	Countywide
69	Buckeye Road - US 41 to US 301	Widen from two lanes to four lanes.	33,543,026	1
70	Buffalo Road - 69th Street E / Moccasin Wallow Rd	Reconstruction & widening from 2 to 4 lanes with pedestrian & bicycle facilities and roadway lighting. To provide capacity for existing traffic and planned growth and to update the typical section to be consistent with throughfare standards.	33,905,992	1
71	Canal Rd - 49th St E - US41 - Segment 4	Design and construction of a functional improvement to the existing roadway from 49th ST E north to US 41 with a traffic signal at US 41 (pending FDOT approval).	3,316,806	1
72	Carter Rd - Erie Rd to Buckeye Rd	Widen from two lanes to four lanes.	16,023,178	1
73	Chip Seal Paving Fund	This project encompasses designing and constructing 4 miles a year of a Double Chip with Fog Seal, completing all 13 miles over a 5 year period to eliminate the need for rebasing under developed roads.	1,387,775	Countywide
74	Clay Gully Phase 1 - from Communications Tower to Sandy Ct.	Reconstruct road base and resurface with asphalt from Communications Tower to Sandy Ct. This is Phase 1 of 2 phases. Phase 2 would be requested in a subsequent year (2.2 centerline miles). Clay Gulley is the major E/W connector in the southeast portion of the county. The condition of the road has deteriorated to an extent that a simple mill & resurface project would not be adequate to rehabilitate the section; therefore this project encompasses reconstructing the base and then resurfacing with 2" structural asphalt and 1" of friction course asphalt. Several small phases of Clay Gulley have already been reconstructed over the years, and this project would continue that effort. The base reconstruction would also allow the roadway to be widened to allow easier passage of traffic. This estimate includes design, preconstruction service, materials testing, and construction utilizing CMAR.	2,910,000	1
75	Clay Gully Phase 2 - from Sandy Ct to Sugar Bowl Rd	Reconstruct road base and resurface with asphalt from Sandy Ct to Sugar Bowl Rd. This is Phase 2 of 2 phases. (1.9 centerline miles). Clay Gulley is the major E/W connector in the southeast portion of the county. The condition of the road has deteriorated to an extent that a simple mill & resurface project would not be adequate to rehabilitate the section; therefore this project encompasses reconstructing the base and then resurfacing with 2" structural asphalt and 1" of friction course asphalt. Several small phases of Clay Gulley have already been reconstructed over the years, and this project would continue that effort. The base reconstruction would also allow the roadway to be widened to allow easier passage of traffic. This estimate includes design, preconstruction service, materials testing, and construction utilizing CMAR	2,559,000	1
76	Clay Gulley Rd Repaving	Repave two lane road - 10 miles.	2,320,000	1
77	Clay Gully Road Rebase and Resurfacing	This project encompasses design, bidding and construction of a 27,000 LF of roadway base, asphalt surfacing and reworking shoulders.	3,918,115	1
78	Complete Streets Tuttle Avenue Phase I - INTERSECTIONS	Design and construct a single-lane roundabout with pedestrian crossing features at the Tuttle Avenue and 72nd Avenue East intersection.	1,047,000	4

MANATEE COUNTY GOVERNMENT
FY26-30 Adopted Capital Improvement Plan

Transportation

Project Count	Project		Amount	District
79	Complete Streets Tuttle Avenue Phase II - INTERSECTIONS	Design and construct a roundabout with pedestrian crossing features at the Tuttle Avenue and 72nd Avenue East intersection.	1,191,000	4
80	CR 39 - Hillsborough Countyline - SR 62 Rebase and Resurfacing	This project encompasses design, bidding and construction of a 20,000 LF of roadway base, asphalt surfacing and reworking shoulders.	3,870,390	1
81	CR 39 Hillsborough Co Line to SR 62	Re-base sections of CR 39 from SR 62 to Hillsborough County Line.	3,964,759	1
82	CR 39 Phase 1 - N of SR 62 to 126th Ct E	Mill & resurface and add shoulders from SR 62 to 126th Ct E. This is Phase 1 of two phases. Phase 2 would be requested in a subsequent year. (2.5 centerline miles). CR 39 is a N/S connecting road which runs from the Hillsborough County line to SR 62. The road is one of only 2 N/S routes in the northeastern rural portion of the county. Traffic consists of both rural (residential) and industrial (mining & steel fabrication plant) traffic. The asphalt in this section is poor, but the base has only localized failures and the roadway is not in need of complete base reconstruction; resurfacing would act as a preventative maintenance treatment in preserving the existing base. The project encompasses milling and resurfacing with 2" structural asphalt and 1" of friction course asphalt. As these sections do not have shoulders, the project would also construct outside shoulders in both directions. This estimate includes design, preconstruction service, materials testing, and construction utilizing CMAR.	2,793,000	1
83	CR 39 Phase 2 - 126th Ct E to S of Carlton Rd	Mill & resurface and add shoulders from 126th Ct E to S of Carlton Rd. This is Phase 2 of 2 phases. (1.2 centerline miles). CR 39 is a N/S connecting road which runs from the Hillsborough County line to SR 62. The road is one of only 2 N/S routes in the northeastern rural portion of the county. Traffic consists of both rural (residential) and industrial (mining & steel fabrication plant) traffic. The asphalt in this section is poor, but the base has only localized failures and the roadway is not in need of complete base reconstruction; resurfacing would act as a preventative maintenance treatment in preserving the existing base. The project encompasses milling and resurfacing with 2" structural asphalt and 1" of friction course asphalt. As these sections do not have shoulders, the project would also construct outside shoulders in both directions. This estimate includes design, preconstruction service, materials testing, and construction utilizing CMAR.	2,091,000	1
84	CR 675 - US 301 to Rye Rd	Widen from two lanes to four lanes.	35,215,776	1
	Creekwood Blvd - SR 70 E to 44th Ave E - Pavement Reconstruction	Design, permit, and construct full base reconstruction and resurfacing of Creekwood Blvd from SR 70 E to 44th Ave E. Including material testing, sidewalk repairs at various locations along the roadway, and pedestrian striping enhancements.	6,355,372	5
85	Desoto and Green Bridge Dynamic Message Signs	Provide electronic signs on bridges to provide traffic and emergency information.	990,000	Countywide
86	Dynamic Message Sign Replacements	Design and construct 4 new dynamic message signs to include foundation, structures, sign, control, power and communication connections.	1,340,500	Countywide
87	Ellenton Gillette Rd - US 301 to Moccasin Wallow Rd	Construct four lane roadway with five feet sidewalk, curb and gutter.	49,709,130	Multi-District
88	Ellenton-Gillette Rd at Mendoza Rd	Installation of mast arm signalized intersection to include left turn lanes on all four legs of intersection.	484,000	1
89	Experimental Farm Rd Bridge Replacement (134005)	Replace aging steel structure.	1,000,000	1

Transportation

Project Count	Project		Amount	District
90	Ft. Hamer Rd - Golf Course Rd / Old Tampa Rd	Design and construct the widening of Golf Course Road from Old Tampa Road to the Ft. Hamer Rd to create a divided four-lane thoroughfare (approximately 5.2 miles). The typical section will include a grass median, turn lanes (as needed), pedestrian & bicycle facilities, and lighting. Modification of four signalized intersections will be required to accommodate the roadway widening. Project will require right-of-way acquisition. It is anticipated that a Project Development & Corridor Study (PD&C) will be completed prior to starting the design.	71,492,738	1
91	Ft. Hamer Rd - Old Tampa Rd / Upper Manatee River Rd	Design and construct the widening of Fort Hamer Road from Old Tampa Road to the Upper Manatee River Rd to create a divided four-lane thoroughfare (approximately 5.2 miles). The typical section will include a grass median, turn lanes (as needed), pedestrian & bicycle facilities, and lighting. Modification of four signalized intersections will be required to accommodate the roadway widening. Project will require right-of-way acquisition. It is anticipated that a Project Development & Corridor Study (PD&C) will be completed prior to starting the design.	62,767,361	Multi-District
92	Fort Hamer Road Extension from FF Road to IA Manatee southern boundary	The project will involve construction of the east pair of lanes of a future north-south four-lane road with 11-foot wide travel lanes, 4-foot wide bicycle lanes, west side 10-foot wide multi-use trail, and east side 5-foot wide sidewalk.	563,530	1
93	Golf Course Rd - Ft. Hamer Rd / Rye Rd	Reconstruction & widening from 2 to 4 lanes with pedestrian & bicycle facilities and roadway lighting. To provide capacity for existing traffic and planned growth and to update the typical section to be consistent with throughfare standards.	47,579,989	1
94	Golf Course Rd from Fort Hamer Rd to Twin Rivers Trail	Construct five feet sidewalk with drainage improvements.	3,421,000	1
95	Greenbrook Blvd from Lorraine Rd to Royal Turn Cir	Add sidewalk on north side.	115,000	5
96	Harbor Woods Curb Replacement	Remove and replace 50,000 linear feet of Type "D" curb. Phase I - from 55th St. W. to 51st St. W., Manatee Ave. to 1st Ave. W. Phase II - from 51st St. W. to 43rd St. W., Manatee Ave. to 1st Ave. W.	1,541,000	4
97	Harrison Ranch Blvd - US 301 to Erie Rd	Widen from two lanes to four lanes.	16,727,493	1
98	I-275 - US 19 / Pinellas County Line	Corridor capacity improvements for State facility. To provide capacity for existing traffic and planned growth. Note 1: This is a major interstate project that is anticipated to be completed by the State and is included here for tracking purposes. Specific cost and scope will be determined by the FDOT.	See Note 1	1
99	I-75 - SR 64 / US 301	Corridor capacity improvements for State facility. To provide capacity for existing traffic and planned growth. Note 1: This is a major interstate project that is anticipated to be completed by the State and is included here for tracking purposes. Specific cost and scope will be determined by the FDOT.	See Note 1	Multi-District
100	I-75 - SR 70 / SR 64	Corridor capacity improvements for State facility. To provide capacity for existing traffic and planned growth. Note 1: This is a major interstate project that is anticipated to be completed by the State and is included here for tracking purposes. Specific cost and scope will be determined by the FDOT.	See Note 1	5
101	I-75 - US 301 / I-275	Corridor capacity improvements for State facility. To provide capacity for existing traffic and planned growth. Note 1: This is a major interstate project that is anticipated to be completed by the State and is included here for tracking purposes. Specific cost and scope will be determined by the FDOT.	See Note 1	1
102	Honore Ave from 83 Ave E to Cooper Creek Blvd	Add two lanes to existing two lane roadway.	4,277,000	4

MANATEE COUNTY GOVERNMENT
FY26-30 Adopted Capital Improvement Plan
Projects of Record

Transportation

Project Count	Project		Amount	District
103	Lakewood Ranch Blvd Phase 1 - S of SR 70 to Bullrush Terrace	Mill and resurface roadway with asphalt from S of SR 70 to Bullrush Terrace. Make sidewalk repairs at selected locations. This would be Phase 1 of 2 phases. Phase 2 would be requested in a subsequent year. (2.0 centerline miles). Lakewood Ranch Blvd is a major N/S connector for Manatee County. This section connects the commercial centers of Lakewood Ranch with multiple neighborhoods and major E/W connectors such as SR 70 and University Parkway. The asphalt condition in this section is poor, but the base has only localized failures and the roadway is not in need of complete base reconstruction; resurfacing would act as a preventative maintenance treatment in preserving the existing base for several more years. The project encompasses milling and resurfacing with 2" structural asphalt and 1" of friction course asphalt. As this road has sidewalk, the project would make repairs in various locations to cracked and/or shatter slabs. Pedestrian striping enhancements would also be made. This estimate includes design, preconstruction services, materials testing, and construction utilizing CMAR.	3,729,000	5
104	Lakewood Ranch Blvd - Rangeland Pkwy to SR 64	Widen from four lanes to six lanes.	33,933,230	5
105	Lakewood Ranch Blvd - River Club Blvd - SR 70 Rebase and Resurfacing	This project encompasses design, bidding and construction of a 2.3 mile section of Lakewood Ranch Blvd for base repairs in selected locations, resurfacing, and rework of shoulders.	3,149,000	5
106	Lakewood Ranch Blvd - SR 70 to SR 64 - Inside Lanes Pavement Reconstruction	Design, permit, and construct full base reconstruction and resurfacing of inside (passing) lanes of Lakewood Ranch Blvd from SR 70 to SR 64. Scope to include material testing, sidewalk repairs at various locations along the roadway, and pedestrian striping enhancements. Lakewood Ranch Blvd connects SR 70 to SR 64 and provides access to a residential neighborhoods, commercial centers, educational institutions (grade schools and colleges). This section of Lakewood Ranch Blvd has deteriorated to an extent that milling & resurfacing the road is not adequate for rehabilitation. In 2019, the pavement of the outside travel lanes was reconstructed (base and asphalt). This project will reconstruct the pavement of the inside (passing) lanes. Additionally, repairs to damaged sidewalks at various locations long the roadway and pedestrian striping enhancements are recommended.	13,765,550	5
107	Lena Rd - SR 64 to SR 70	Widen from two lanes to four lanes.	45,678,660	5
108	Lockwood Ridge Rd at Whitfield Ext	Add turn lane(s).	1,307,000	4
109	Lorraine Road - SR 70 - Players Dr Rebase and Resurfacing	This project encompasses design, bidding and construction of a 1.6 mile section of roadway, repair areas of base, resurface, rework shoulders.	2,681,000	5
110	Malachite Rd at New Haven Blvd-Central Park Blvd Intersection Improvements	Design, permit, and install traffic signals with mast arm assemblies and associated pedestrian crossings for all legs. In addition, install non-intrusive detection system, CCTV cameras, MVDS, and install fiber-optic connections from Lakewood Ranch Blvd to New Haven Blvd.	2,195,950	5
111	Mendoza Rd - US 19 to Victory Rd	Widen from two lanes to four lanes.	39,265,590	1
112	Mendoza Rd from Ellenton-Gillette to I-75	Widen from two lanes to four lanes.	10,999,000	1
113	Morgan Johnson - Caruso Rd - SR 70 to SR 64	Widen roadway to 24 feet and resurface over entire width. Construct closed drainage and re-grade to provide eight feet shoulders.	7,200,000	Multi-District
114	Neighborhood Reconstruction Program - Pilot	The full replacement of curb when the roads are resurfaced.	600,000	Countywide
115	"NEXT SIGNAL" Guide signs at Major County Intersections	Design and install 50 multi-post Advance Intersection Guide Signs on approaches to 20 major intersections in the County (see location map).	590,000	Countywide
116	Old Tampa Road from 89 Ave E to Chin Rd	Add sidewalks to both sides of the road.	811,000	1

MANATEE COUNTY GOVERNMENT
FY26-30 Adopted Capital Improvement Plan
Projects of Record

Transportation

Project Count	Project		Amount	District
117	Permanent Speed Feedback Signs - Countywide	Design and install 46 Permanent Speed Feedback Signs at 14 throughfare corridors in the County (see location map). These solar powered units shall display a static speed limit sign on the top and a radar driven LED sign showing real-time speed feedback under the static sign.	662,000	Countywide
118	Piney Point Rd Ext. (Port Connector) - US 41 to I-75	Construct four lane limited access roadway.	57,865,692	1
119	Preliminary Engineering Studies	This project is a program that is expected to support scoping and feasibility analysis for several future capital projects that may or may not be concurrency-related.	1,337,500	Countywide
120	Rangeland Pkwy at Uihlein Rd Intersection Improvements	Evaluate, design, permit, and install traffic signals with mast arm assemblies and associated pedestrian crossings for all legs. In addition, install non-intrusive detection system, CCTV cameras, MVDS, and install fiber-optic connections from Uihlein Rd to Bourneside Blvd. Two thoroughfares, Rangeland Pkwy and Uihlein Rd, are four-lane divided roadways classified as collectors in the County's Comprehensive Plan. The intersection of Rangeland Pkwy and Uihlein Rd currently operates as an all-way stop control. This intersection is surrounded by major traffic generators (e.g., Premier Sports Campus, Lakewood National and Esplanade communities, the future Lakewood Ranch Library and Aquatic Center, etc.). There has been a steady growth of traffic in the area that is expected to continue. Staff recommends installing a traffic signal at this intersection. In addition, staff also recommends including Advanced Traffic Management Systems (ATMS) infrastructure such as fiber, CCTV cameras Microwave Vehicle Detection Systems to provide connection to the Traffic Management Center (TMC) to improve operational and monitoring capabilities. The traffic signal is expected to improve the overall operations and safety of the vehicles, bicyclists, and pedestrians at this intersection.	2,371,450	5
121	Red Rooster Rd from US 301 to Major Turner Run	Road drainage and add sidewalk on one side.	350,000	1
122	Rye Rd - Golf Course Rd / Upper Manatee River Rd	Reconstruction & widening from 2 to 4 lanes with pedestrian & bicycle facilities and roadway lighting. To provide capacity for existing traffic and planned growth and to update the typical section to be consistent with throughfare standards.	36,492,965	1
123	Sawgrass Rd - Erie Road to II Rd	Widen from two lanes to four lanes.	26,816,877	1
124	School Drive from Lakewood Ranch Blvd to Mustang Alley	Add sidewalk on one side.	161,000	5
125	Sidewalk Improvements Countywide	Sidewalk improvements as needed - countywide.	300,000/year	Countywide
126	Spencer Parrish Rd from 57th St E to Golf Course Rd	Widen from two lanes to four lanes.	19,762,636	1
127	Spencer Parrish Rd from 57th St E to Golf Course Rd	Construct sidewalk.	870,000	1
128	SR 64 - 27th St E to Carlton Arms	Construct sidewalks.	144,578	2
129	SR 64 - Lakewood Ranch Blvd to Lorraine Rd	Widen from four lanes to six lanes.	19,898,702	Multi-District
130	SR 70 - 30th St E intersection	Construct northbound & southbound dual left turn lanes and separate right turn lane.	575,000	2
131	SR 70 - 33rd St E	Traffic signal upgrades.	400,000	2
132	SR 70 - 87th Street E / Braden Run	Corridor capacity improvements for State facility. To provide capacity for existing traffic and planned growth. Note 2: This is a state road that has already has the number of lanes anticipated in the 2045 Traffic Circulation Map. The project is anticipated to be completed by the State and is included here for tracking purposes. Specific cost and capacity increasing scope will be determined by the FDOT.	See Note 2	5
133	SR 70 - Caruso Rd	Traffic signal upgrades.	400,000	5

MANATEE COUNTY GOVERNMENT
FY26-30 Adopted Capital Improvement Plan
Projects of Record

Transportation

Project Count	Project		Amount	District
134	SR 70 - River Club Blvd / Lakewood Ranch Blvd	Corridor capacity improvements for State facility. To provide capacity for existing traffic and planned growth. Note 2: This is a state road that has already has the number of lanes anticipated in the 2045 Traffic Circulation Map. The project is anticipated to be completed by the State and is included here for tracking purposes. Specific cost and capacity increasing scope will be determined by the FDOT.	See Note 2	5
135	SR 70 - Tara Boulevard / I-75	Project Description: Corridor capacity improvements for State facility. To provide capacity for existing traffic and planned growth. Note 2: This is a state road that has already has the number of lanes anticipated in the 2045 Traffic Circulation Map. The project is anticipated to be completed by the State and is included here for tracking purposes. Specific cost and capacity increasing scope will be determined by the FDOT.	See Note 2	5
136	Tallevast Rd - US 41 to 301 Blvd	Widen from two lanes to four lanes.	12,766,852	4
137	Tara Boulevard Complete Street Phase II - Tara Preserve Lane to Linger Lodge Road	Construct traffic calming measures with intersection improvements constructing two single lane roundabouts at Tailfeather Way and Linger Load Road and incorporate street lights, and additional traffic control devices to enhance pedestrian safety.	3,605,000	5
138	Tara Blvd Traffic Calming (Phase 1) - Stone River Rd to Tara Preserve Ln	Evaluate, design, permit and construct traffic calming measures that include the repurposing Tara Blvd from a four-lane divided roadway to a two-lane roadway with a buffered multi-use lane for golf carts and cyclists in both directions from Tara Preserve Ln to Stone River Rd. In addition, evaluate, design permit, and construct single lane roundabouts (using low-cost modular materials) at Drewrys Bluff and Tara Preserve Lane along with additional traffic control devices to provide enhance pedestrian safety. Tara Boulevard is currently a two-lane divided road from Linger Lodge Road to Tara Preserve Ln and a four-lane divided road from Tara Preserve Ln to SR 70 with a posted speed limit of 30 mph. The Board of County Commissioners recently approved an update to the County's Traffic Circulation Plan removing Tara Blvd, from Honore Ave to Linger Lodge Rd, thus eliminating the section that included a bridge over the Braden River. Tara Blvd is also a designated road to be used by golf carts pursuant to Sec. 2-22-9(g)(1)(d), Code of Ordinances. The purpose of this project is to implement Safe Speed (Safe System Approach) traffic calming measures to accommodate all road users (e.g., golf carts, cyclists, etc.) on Tara Blvd while preserving the community's character. The project will also include intersection single lane roundabouts at Drewrys Bluff and Tara Preserve Ln along with traffic control devices to enhance pedestrian safety.	1,515,000	5

Transportation

Project Count	Project		Amount	District
139	Traffic Signal Infrastructure Resiliency Upgrades (West Bradenton)	Evaluate, design, permit, replace, and install traffic signals with mast arm assemblies and associated pedestrian crossing for all legs with lighting at the following intersections: (i) 301 Blvd at 9th St E; (ii) 53rd Ave W at 20th St W, 26th St W, and 30th St W; (iii) 59th St W at 11th Ave W, 17th Ave W, and 21st Ave W; (iv) 26th St W at 9th Ave W, 17th Ave W, 25th Ave W, 38th Ave W, 57th Ave W, and 60th Ave W; (v) 9th St E at 26th Ave E and 30th Ave E; (vi) 43rd St W at 9th Ave W; (vii) 9th Ave W at 39th St W; (viii) 51st St W at 38th Ave W. Design shall meet mast arm structural design standards near coastlines and include new controller cabinets, power backup systems, underground infrastructure, and power supply. For all intersection install CCTV cameras and MVDS with connection to TMC. The Public Works Department owns and maintains over 40 signalized intersections which use span wire assemblies (i.e., suspension cable systems) to support traffic signals, signal conductors, and detection hardware. Span wire assemblies are more prone to damage during hurricanes or strong wind events which cause hardware and equipment damage that required emergency repair response. In addition, many of the older span wire intersections no longer meet current structural design standards for near coastlines. Staff have identified 18 locations where these span wire intersections have met or exceeded their useful design life. All subject intersections are within the FDOT Mast Arm Boundary Map, which designates areas that signals are to be supported by galvanized mast arms. This project will improve the structural resiliency of these signal assemblies, promote overall intersection safety, and reduce maintenance demand. Also, staff recommends include Advanced Traffic Management Systems (ATMS) infrastructure such as CCTV cameras, Microwave Vehicle Detection Systems (MVDS) to provide connection to the Traffic Management Center (TMC) to improve operational and monitoring capabilities.	44,129,000	Countywide
140	Tropical Harbour Curb Replacement	Remove and replace 5,000 Linear Feet (10,000 square feet) of Miami Curb.	636,656	2
141	Uihlein Rd at Lakewood National Pkwy Intersection Improvements	Design, permit, and install traffic signals with mast arm assemblies and associated pedestrian crossings for all legs. In addition, install non-intrusive detection system, CCTV cameras, MVDS, and install fiber-optic connections from Rangeland Blvd to Lakewood National entrance. Uihlein Rd is a four-lane divided thoroughfare classified as a collector in the County's Comprehensive Plan and connects two major state roads (SR 70 and SR 64). Lakewood National Parkway is a four-lane divided private roadway that connects two major collector thoroughfares, Uihlein Rd to Bourneside Blvd, and provides connection to several residential communities. The intersection of Uihlein Road and Lakewood National Parkway operates as a two-way stop-control for Lakewood National Parkway. Steady traffic growth in the area is expected to continue due to existing and future developments in the area. Staff recommend installing a traffic signal at this intersection. Staff also recommends including Advanced Traffic Management Systems (ATMS) infrastructure such as fiber optics, CCTV cameras Microwave Vehicle Detection Systems (MVDS) to provide connection to the Traffic Management Center (TMC) to improve operational and monitoring capabilities.	2,612,500	5
142	Upper Manatee River Rd from Ft Hamer Bridge to Rye Rd	The existing two lane road will be reconstructed to include standard lane widths, pedestrian and bicycle facilities, and lighting.	21,000,000	5
143	University Parkway - Lakewood Ranch Blvd - Lake Club Blvd Rebase and Resurfacing	This project encompasses design, bidding and construction of a 15,000 LF of roadway base, asphalt surfacing, repair sidewalks, rework shoulders and repair curbing.	5,957,000	5
144	University Parkway Lakewood Ranch Blvd to Lake Club Circle	Re-base large sections of University Parkway from Lakewood Ranch Blvd to Lake Club Blvd.	6,391,600	1
145	US 301 - 41st Ave E to 51st Ave E	Construct sidewalk.	460,000	1

8	Cow Pen Slough Drainage Improvements - Segment 2 of 3	The second segment begins at the County line just east of the Concession. The work includes evaluate, design, permit, and construct approximately 3 miles of natural drainage system improvements for the Cow Pen Slough from the east side of the Concession to SR 70. There will be two phases for each segment. Phase 1: mapping and land/easement acquisition; Phase 2: land clearing and flowline improvements. Improvements to include but not limited to vegetation removal, drain widening, sediment removal, channel straightening, and upsizing culverts. Obtain necessary drainage/access easement required for the improvements.	9,155,836	5
9	Cow Pen Slough Drainage Improvements - Segment 3 of 3	The first segment begins at the north side of SR 70. The work includes evaluate, design, permit, and construct approximately 3 miles of natural drainage system improvements for the Cow Pen Slough from the north side of SR 70 north to 65th Ave E. There will be two phases for each segment. Phase 1: mapping and land/easement acquisition; Phase 2: land clearing and flowline improvements. Improvements to include but not limited to vegetation removal, drain widening, sediment removal, channel straightening, and upsizing culverts. Obtain necessary drainage/access easement required for the improvements.	9,155,836	5
10	Crystal Lakes Automated Outfall Structures	Evaluate and install four (4) Automated Outfall Structures (AOS) to create additional flood storage for this watershed. Location of AOSs to be based upon accessibility to public right-of-way. Provide a drainage easement(s) over the stormwater facilities for permitting, construction, inspection, and maintenance of the AOS, supporting communications, and water quality monitoring equipment, as required.	2,104,011	1
11	Design of Bay Drive Storm Pipe Improvements Sidewalks and Utility Adjustments	Design and permit drainage improvements, sidewalk, driveways and ADA curb ramps.	425,453	4
12	Easement Acquisition Countywide	Identify and obtain necessary easements for our stormwater canal and pipe systems throughout Manatee County.	1,462,500	Countywide
13	Fountain Lakes Automated Outfall Structures	Evaluate and install two (2) Automated Outfall Structures (AOS) to create additional flood storage for this watershed. Location of AOSs to be based upon accessibility to public right-of-way. Provide a drainage easement(s) over the stormwater facilities for permitting, construction, inspection, and maintenance of the AOSs, supporting communications, and water quality monitoring equipment, as required. Additionally, replace and lower the invert elevation of an existing stormwater outfall pipe discharging towards 57th Avenue West.	1,675,206	2, 4
14	Glen Lakes Automated Outfall Structures	Evaluate and install eight (8) Automated Outfall Structures (AOS) to create additional flood storage for this watershed. Location of AOSs to be based upon accessibility to public right-of-way. Provide a drainage easement(s) over the stormwater facilities for permitting, construction, inspection, and maintenance of the AOS, supporting communications, and water quality monitoring equipment, as required.	3,865,212	4
15	Glen Creek Stormwater Pipe Relocation	Evaluate, design, permit, and construct approximately 700 LF of 36" RCP storm drain, collection boxes, headwall, and bank revetment. Obtain necessary easement(s) required for access and maintenance of the pipe at its new location. Abandoned or remove stormwater infrastructure in conflict with the City of Bradenton project. Replacement to be of like size with no modification in flow capacity.	821,925	2

MANATEE COUNTY GOVERNMENT
FY26-30 Adopted Capital Improvement Plan
Projects of Record

Stormwater

Project Count	Project		Amount	District
16	Greenfield Plantation Stormwater Pipe Replacement and Rehabilitation	The Greenfield Plantation community has drainage infrastructure that is prone to failures. The existing stormwater conveyance systems are easily overwhelmed and could benefit from redesign, pipe upsizing, and/or pipe rehabilitation. The pipe upsizing will require engineering design and property acquisition thus is outside the scope of regular maintenance.	2,738,917	5
17	Lakeside Village Automated Outfall Structure	Evaluate and install one (1) Automated Outfall Structures (AOS) to create additional flood storage for this watershed. Location of the AOS to be based upon accessibility to public right-of-way. Provide a drainage easement(s) over the stormwater facilities for permitting, construction, inspection, and maintenance of the AOS, supporting communications, and water quality monitoring equipment, as required.	1,121,328	4
18	Longbay Area Drainage Improvements	This project will replace 7,000 feet of aging storm water conveyance pipe and associated drainage infrastructure. The project would include Bernard Ave, Somerset Ave, Suwanee Ave, Hernando Ave, and Braden Ave.	12,696,909	4
19	Moss Creek Automated Outfall Structures	Evaluate and install three (3) Automated Outfall Structures (AOS) to create additional flood storage for this watershed. Location of the AOS to be based upon accessibility to public right-of-way. Provide a drainage easement(s) over the stormwater facilities for permitting, construction, inspection, and maintenance of the AOS, supporting communications, and water quality monitoring equipment, as required.	1,506,141	4
20	Mote Ranch - Chaparral Automated Outfall Structures	Evaluate and install five (5) Automated Outfall Structures (AOS) to create additional flood storage for this watershed. Location of the AOS to be based upon accessibility to public right-of-way. Provide a drainage easement(s) over the stormwater facilities for permitting, construction, inspection, and maintenance of the AOS, supporting communications, and water quality monitoring equipment, as required.	2,559,843	4
21	Palm Aire Automated Outfall Structures	Install seven (7) Automated Outfall Structures (AOS) to create additional flood storage in this watershed. Location of AOSs to based upon accessibility to public right-of-way. Provide a drainage easement(s) over the stormwater facilities for permitting, construction, inspection, and maintenance of the AOS, supporting communications, and water quality monitoring equipment, as required.	3,269,100	4
22	Palmetto Point Drainage Improvements	Evaluate, design and permit the reconstruct/improvement of the existing drainage system. This includes approximately 17 miles of roadside ditches and associated stormwater infrastructure including but not limited to, upsizing culverts, installing mitered end section at driveway crossings, and outfall modifications. Obtain necessary drainage easement needed for the improvements or existing infrastructure. A wetland or water quality permit element is anticipated with this project in the modern permitting era, that will add additional cost for additional pond sites or a wetland mitigation credits.	5,747,500	2
23	Pearce Drain - North Regional Flood Mitigation	Preemptive drawdown of stages of existing stormwater facilities throughout the watershed in times of emergency activation or issuance of Flood Watch products by the National Weather Service in advance a forecasted storm/flood event to create additional stormwater/floodplain storage through the utilization of Automated Outfall Structures (AOS) and other modification/improvements with the watershed. The project limits are 63rd Avenue East northward (downstream) to the confluence with the Braden River.	5,000,000	2, 4, 5

MANATEE COUNTY GOVERNMENT
FY26-30 Adopted Capital Improvement Plan
Projects of Record

Stormwater

Project Count	Project		Amount	District
24	Pearce Drain - Phase 2 Regional Stormwater Improvements	Phase 2 project would consist of replacement or improvements to existing culvert crossings and/or bridges within Pearce Drain Watershed to create additional conveyance capacity within primary and secondary drainage systems. This project would follow installation of Automated Outfall Structures throughout the watershed and regional flood mitigation faculties.	5,000,000	2, 4, 5
25	Pearce Drain - South Regional Flood Mitigation	Preemptive drawdown of stages of existing stormwater facilities throughout the watershed in times of emergency activation or issuance of Flood Watch products by the National Weather Service in advance a forecasted storm/flood event to create additional stormwater/floodplain storage through the utilization of Automated Outfall Structures (AOS) and other modification/improvements with the watershed. The project limits are Manatee-Sarasota County Line northward (downstream) to 63rd Avenue East.	5,000,000	2, 4, 5
26	Pearce Drain - Phase 1 Regional Flood Mitigation Design Permitting	Preemptive drawdown of stages of existing stormwater facilities throughout the watershed in times of emergency activation or issuance of Flood Watch products by the National Weather Service in advance a forecasted storm/flood event to create additional stormwater/floodplain storage through the utilization of Automated Outfall Structures (AOS) and other modification/improvements with the watershed. Create additional floodplain mitigation by directly-connecting stormwater/floodplain mitigation facilities to primary drainage systems by the removal of berms and/or embankments or the installation of spillways or equalization culverts. Phase 2 replacement/improvements to existing culvert-crossings and/or bridges to improvement conveyance capacity of primary and secondary drainage systems throughout the watershed.	1,000,000	2, 4, 5
27	Pearce Drain - Regional Flood Mitigation Facilities	Modification of existing stormwater/floodplain mitigation facilities to primary drainage systems by the removal of berms and/or embankments or the installation of spillways or equalization culverts.	2,000,000	2, 4, 5
28	Pittsburg Drain - Regional Flood Mitigation Project	Preemptive drawdown of stages of existing stormwater facilities throughout the watershed in times of emergency activation or issuance of Flood Watch products by the National Weather Service in advance a forecasted storm/flood event to create additional stormwater/floodplain storage through the utilization of Automated Outfall Structures (AOS) and other modification/improvements with the watershed. Improvements to downstream outfall systems may be required to effectively drawdown stormwater facilities. Pumps may also be considered where the existing downstream outfall is relatively high to prevent effective drawdown of stages. This project consists of modification of existing stormwater facilities along the mainline system of Pittsburg Drain and secondary systems.	5,350,000	2, 4
29	Poinsettia Avenue Drainage Improvements	Evaluate, design, permit, and construct approximately 1,200 LF of Type A curb & gutter along east side of Poinsettia Avenue with associated collection box, and outfall pipe. Acquisition of access/maintenance easement will be required.	1,096,875	2

MANATEE COUNTY GOVERNMENT
FY26-30 Adopted Capital Improvement Plan
Projects of Record

Stormwater

Project Count	Project		Amount	District
30	Rattlesnake Slough Regional Storage Design and Permitting	Preemptive drawdown of stages of existing stormwater facilities throughout the watershed in times of emergency activation or issuance of Flood Watch products by the National Weather Service in advance a forecasted storm/flood event to create additional stormwater/floodplain storage through the utilization of Automated Outfall Structures (AOS) and other modification/improvements with the watershed. An existing County floodplain mitigation facility would be designed and permitted for modification and excavation to create additional flood storage volume. A proposed channel/culvert system would connect Rattlesnake Slough to the existing County floodplain mitigation area under Honore Avenue, though the existing County Floodplain Mitigation Area to the Evers Reservoir. Automated Outfall Structures would be utilized in this system to prevent backflow from Evers Reservoir. In addition, design and permitting would be included for flood storage areas along Rattlesnake Slough on private property and City of Bradenton property.	700,000	4, 5
31	Regional Storage Drainage Improvements - Bowlees Creek	Design and construction. This project will lower the flood stages and remove 91 structures from the 100 year floodplain. This will be accomplished with construction of 41.5 ac of ponds, modification of existing weirs and modifying neighboring pond control structures for additional storage.	7,405,003	2, 4
32	Saraplams Automated Outfall Structures	Evaluate and install eight (8) Automated Outfall Structures (AOS) to create additional flood storage for this watershed. Location of the AOS to be based upon accessibility to public right-of-way. Provide a drainage easement(s) over the stormwater facilities for permitting, construction, inspection, and maintenance of the AOS, supporting communications, and water quality monitoring equipment, as required.	3,642,912	4
33	Slaughter Drain Segment 1 - Canal Maintenance Establishment	Acquire access easements as needed, clear and grub access and canal banks, remove blockages, establish appropriate flow line elevations.	1,457,425	1
34	Slaughter Drain Segment 2 - Canal Maintenance Establishment	Acquire access easements as needed, clear and grub access and canal banks, remove blockages, establish appropriate flow line elevations.	711,274	1
35	Storm Pipe Asset Mapping	Map our current storm pipe system and identify GIS locations, pipe type and diameter and any associated structures.	638,500	Countywide
36	Summerwoods Automated Outfall Structures	Evaluate and install four (4) Automated Outfall Structures (AOS) to create additional flood storage for this watershed. Location of the AOS to be based upon accessibility to public right-of-way. Provide a drainage easement(s) over the stormwater facilities for permitting, construction, inspection, and maintenance of the AOS, supporting communications, and water quality monitoring equipment, as required.	1,914,471	1
37	Terra Ceia Bay Stormwater Improvement	This project will consist of construction of a new stormwater conveyance system from 64th Street Court East to Terra Ceia Bay. This proposed conveyance system will consist of either an open drainage ditch or a stormwater pipeline. Acquisition of a drainage easement through private property will be necessary for construction of the proposed stormwater conveyance system and perpetual maintenance. A drainage-maintenance access easement will also need to be acquired for maintenance vehicle access to an open drainage ditch option. Design and permitting associated with the proposed stormwater conveyance system. Water quality Best Management Practices (BMP) to be utilized during construction and incorporated into the stormwater improvement where possible.	907,569	3

Project Count	Project		Amount	District
38	Waterford at Imperial Lakes Automated Outfall Structure	Evaluate and install two (2) Automated Outfall Structures (AOS) to create additional flood storage for this watershed. Location of the AOS to be based upon accessibility to public right-of-way. Provide a drainage easement(s) over the stormwater facilities for permitting, construction, inspection, and maintenance of the AOS, supporting communications, and water quality monitoring equipment, as required. Additionally, lower outfall from stormwater facility at the intersection of Buffalo Road at Willis Road. Utility adjustments, as needed, to the existing water mains for downstream outfall system at Buffalo Road.	5,507,190	1
39	Trailer Estates - Area A	Construction of rear yard swale improvements, inlet repairs, and pipe upsizing.	292,500	4
40	Trailer Estates - Area B	Construct rear yard swale improvements, inlet repairs, and pipe upsizing, increase of outfall capacity as well as CMP pipe replacement on Bay Drive west of Canada Blvd.	479,700	4
41	Trailer Estates - Area C	Construct rear yard swale improvements, inlet repairs, pipe upsizing, and increase of outfall capacity.	659,880	4
42	Whitfield Estates Sidewalk, Curb and Drainage Improvements	Remove and replace sidewalk and curb and tree removal causing damage to both, drainage improvements including utility adjustments and resurfacing for Wee Burn, Chevy Chase, St. Andrews, McArthur, and Meadowbrook.	6,432,646	4
43	Willis Road, Palmetto	This project will consist of construction of a new stormwater conveyance system from Willis Road south to Buffalo Canal. This proposed conveyance system will consist of either an open drainage ditch or a stormwater pipeline. Acquisition of a drainage easement through private property will be necessary for construction of the proposed stormwater conveyance system and perpetual maintenance. A drainage-maintenance access easement will also need to be acquired for maintenance vehicle access to an open drainage ditch option. Design and permitting associated with the proposed stormwater conveyance system. Water quality Best Management Practices (BMP) to be utilized during construction and incorporated into the stormwater improvement where possible.	1,313,208	1
44	Woods of Moccasin Wallow Automated Outfall Structures	Evaluate and install three (3) Automated Outfall Structures (AOS) to create additional flood storage for this watershed. Location of the AOS to be based upon accessibility to public right-of-way. Provide a drainage easement(s) over the stormwater facilities for permitting, construction, inspection, and maintenance of the AOS, supporting communications, and water quality monitoring equipment, as required. Utility adjustments, as needed, for the installation of automated outfall structure along 52nd Avenue East.	1,837,836	1
		Stormwater Total Amount	**$ 147,288,864**	

MANATEE COUNTY GOVERNMENT
FY26-30 Adopted Capital Improvement Plan
Projects of Record

Wastewater

Project Count	Project		Amount	District
1	66th Street Lift Station Building	Replicate the Sewer Collections Building design that was constructed in 2018. This is an 8,000 sf mixed use facility with office space, training rooms, kitchen, showers and locker rooms. Retrofit office space in the existing 1980's era building to maximize use of storage with a goal to demobilize sea-pack containers from the site.	4,200,000	3
2	69th Ave Parallel Force Main (6097780)	Project completed Design @ 60% - on hold pending the construction of the other Developer projects in the area within the next 10 years.	900,000	4
3	Bollettieri Blvd W Reclaimed Water Main Improvements	Upsize existing 10" reclaimed water main to 16" along west side of Bollettieri Blvd W from the existing 14" (ending approximately 1,300 LF from 53rd Ave W) south for approximately 1,200 LF to IMG Academies Park, by removing the existing 10" reclaimed water main and furnishing and installing approximately 1,200 LF of new 16" reclaimed water main. Will need to acquire easement	1,539,000	4
4	Braden Pines Sewer Conversion	To convert the current homes in this area from septic tanks to the County sewer system by using possible grant funding with the County only paying a percentage of the project cost. The type of conversion as in gravity, grinder stations, and vacuum systems will be determined after an assessment is completed identifying homes on a septic system in this area. Also, decommission the old septic tanks and connect the property to the new County sewer system.	29,336,000	5
5	Braden River LS Yard	Construct a field service office on existing County property, relocate staff and equipment from Ellwood 1. Provide electric automated gate on site approx. 2 acres total to include: 1,500 sf multiuse office/restroom/showers/kitchen, 2,000 sf warehouse space, 2,000 sf covered pad for pump and generator storage, 300 sf building for flammables/oil storage, material stockpiles and stormwater treatment. Compound will need fencing, card reader access gate, access spur off of Natalie Way and stormwater management.	2,500,000	5
6	Braden Woods Sewer Conversion	To convert the current homes in this area from septic tanks to the County sewer system by using possible grant funding with the County only paying a percentage of the project cost. The type of conversion as in gravity, grinder stations, and vacuum systems will be determined after an assessment is completed identifying homes on a septic system in this area. Also, decommission the old septic tanks and connect the property to the new County sewer system.	102,207,000	5
7	Central County Field Operations Depot	Use 6 acres of land that is already cleared and establish a warehouse, field operations building, covered lift station pump storage, paved parking for up to 100 vehicles, material stockpile areas, inventory warehousing, covered storage for lift station pumps and shop space. Use east of the current SERWRF Maintenance Building. Enclosed spaces envisioned include: 7500 sf of office space and 1000 sf of interior warehousing (40% under AC). Include fuel island and connection to 44th Avenue. This will also provide an entrance for the SERWRF that will not involve the main landfill gate. This is not intended to accommodate landfill traffic which will continue from SR 64, but an emergency secondary entrance may be helpful.	12,860,000	5
8	City of Bradenton Reclaimed Water to the MCMRS	Pipeline and Booster Station for the County to take the City of Bradenton's reclaimed water for wet season disposal. Pipeline, metering, booster station and any required appurtenances that the County and/or Florida Department of Environmental Protection (FDEP) might require for the County to take the City of Bradenton's reclaimed water. Telemetry of the system to the Southeast Regional Water Reclamation Facility (SERWRF) would also be required. Most of this system would be constructed at Braden River Park.	6,420,000	5

Wastewater

Project Count	Project		Amount	District
9	Colony Cove Pipeline Replacement Plan and Phase II Replacements (WW02235)	Due to the magnitude of the project, the construction will be funded and completed in phases. The first task in the project is to conduct a study of the area and to develop a phased Colony Cove Pipeline Replacement Plan and Preliminary Design Report. After the Plan and Preliminary Design are complete, Phase I will be designed and constructed. It is anticipated that there will be additional future phased construction packages. This is a current project that the current funding is inadequate. We are asking for more funding for the design and construction of Phase II.	24,289,000	1
10	Colony Cove Pipeline Replacement Plan and Phase III Replacements (WW02246)	Due to the magnitude of the project, the construction will be funded and completed in phases. The first task in the project is to conduct a study of the area and to develop a phased Colony Cove Pipeline Replacement Plan and Preliminary Design Report. After the Plan and Preliminary Design are complete, Phase I will be designed and constructed. It is anticipated that there will be additional future phased construction packages. This is a current project that the current funding is inadequate. We are asking for more funding for the design and construction of Phase III.	23,776,000	1
11	Cortez DIW Replacement	The new Class 1 well shall be complete with new 24" piping, appurtenances, and booster pump station with a canopy. It shall be capable of injecting 18 MGD. The well shall be built at the Southwest Water Reclamation Facility, by the existing well on Cortez Road or across the street from the existing well on County property.	20,187,000	4
12	CR 675 Force Main	Install new force main per master plan along C.R. 657	1,225,000	1
13	Erie Rd - Martha Rd to Harrison Ranch - MARS	Construct reclaim water line from Harrison Ranch Boulevard to Copperstone Phase 1 using approximately 7,800 linear feet of 16 inch ductile iron pipe.	4,500,000	1
14	Harrison Ranch Force Main	Install new force main per master plan along Harrison Ranch Blvd.	1,305,000	1
15	Landfill Class I Industrial Injection Well	Study and develop design criteria for a small treatment system to collect and treat a liquid waste stream to make it suitable for injection. Leachate is the primary concern, however, there are other liquid residual waste streams from processes on this site (FOG and the Pelletizer) that burden or represent risk for the biological treatment processes. Site, drill and construct a Class 1 industrial injection well and monitoring well system. Site and construct the collection and treatment system and secure an operational testing permit.	20,676,000	5
16	MCMRS Booster Pump Station Improvement	Replacement of Pumps at the MRS Booster Pump Stations.	5,700,000	Multi-District
17	North Regional Water Reclamation Facility Administration & Maintenance Bldg. (WW01852)	Replace the Administration Bldg. and add a Maintenance Bldg. to accommodate the NR Water Reclamation Facility Management staff offices.	5,700,000	1
18	North Regional Water Reclamation Facility Reclaimed Water Storage Lake Improvements (WW01421)	Reduce slope to 3.1 where necessary on the Golf Course Lake. Remove all peninsulas in the Golf Lake Course.	8,000,000	1
19	Rye Rd BPS to Spencer Parrish Rd PS Parallel Water Main Improvements (NEW)	Construct 16" reclaimed water main to parallel the existing 30" reclaimed water main along Rye Rd E from Rye Rd Bypass (BPS) north to Golf Course Rd, northwest along Golf Course Rd to Spencer Parrish Rd continuing to Spencer Parrish Pump Station (PS), by furnishing and installing approximately 49,000 LF of new 16" reclaimed water main.	29,000,000	1
20	North Regional Water Reclamation Facility10 MG Reclaimed Water Storage Tank & HSPS (WW01422)	Installation of a 10 million gallon reclaimed storage tank with a new high service pump station.	25,400,000	1
21	Rye Road Reclaimed Pump Station Upgrade (NEW)	Remove three existing pumps and furnish and install three 150 hp and one 75 hp horizontal split-case pumps and required electrical upgrades. Inspect discharge piping, pipe bracing, base ells, influent main brackets, and mounting plates for corrosion damage and replace as necessary.	2,800,000	1

Infrastructure Sales Tax Fiscal Years 2026 - 2030

Program Summary

Manatee County Infrastructure Sales Tax: Overview and Purpose

In 2016, the Manatee County Board of County Commissioners determined that investing in safer neighborhoods, easing traffic congestion, and improving roadways and public facilities would serve the long-term interests of the community. To fund these infrastructure improvements, the Board adopted Ordinance 16-35, which established a one-half percent (0.5%) Infrastructure Sales Tax (IST) for a period of 15 years, as permitted under Section 212.055(2) of the Florida Statutes.

This local sales surtax was placed on the November 8, 2016, general election ballot and was approved by a majority of Manatee County voters. The tax took effect on January 1, 2017, and is set to expire on December 31, 2031, unless extended by voter referendum.

Purpose and Use of Funds

Revenue from the Infrastructure Sales Tax is collected by the Florida Department of Revenue and distributed to Manatee County and its municipalities. In accordance with state law, these funds are dedicated solely to planning, financing, and constructing public infrastructure projects. Eligible uses include, but are not limited to:

- Roadways, sidewalks, and intersections
- Street lighting
- Infrastructure for law enforcement and emergency response
- Libraries, parks, and public buildings
- Waterways and stormwater systems

All expenditures must comply with the requirements set forth in Section 212.055(2), Florida Statutes, and must be used exclusively for qualifying infrastructure purposes.

Oversight and Governance

To ensure transparency and public accountability, the County established a Citizens Oversight Committee through Resolution R-16-128, as amended by Resolution R-18-130. This seven-member committee, appointed by the Board of County Commissioners, serves as an advisory and reporting body. It is responsible for reviewing expenditures and submitting an annual report on the use of Infrastructure Sales Tax proceeds no later than December 31 of each year.

The Committee and its activities are governed by applicable state laws, including:

- The Florida Government in the Sunshine Law (Chapter 286, Florida Statutes)
- The Florida Public Records Law (Chapter 119, Florida Statutes)
- The Florida Code of Ethics for Public Officers and Employees (Chapter 112, Florida Statutes)

Funding Framework

The County utilizes two guiding documents to manage how IST funds are allocated and spent:

1. **Infrastructure Sales Tax Funding Categories List** – Establishes budget categories and corresponding percentages for how tax proceeds are distributed. Any

changes to this list require a public hearing and formal amendment to the resolution.

2. **Infrastructure Sales Tax Project and Equipment List** – Identifies specific projects and equipment to be funded through the sales tax. Updates to this list must be made through the County's Five-Year Capital Improvement Plan (CIP) process or by resolution at a public hearing.

Through this framework, Manatee County remains committed to responsibly managing public funds and ensuring that Infrastructure Sales Tax revenues are invested in projects that benefit the community today and into the future.

Glossary

Appropriation

Legal authorization given by the County Commission to make expenditures and incur obligations using county funds.

Arterial Road

A route providing service which is relatively continuous and of relatively high traffic volume, long average trip length, high operating speed and high mobility importance. The primary purpose of arterials is to provide service to major traffic movements; access to abutting property is a subordinate purpose.

Beginning Fund Balance

The Ending Fund Balance of the previous period. (See Ending Fund Balance)

Bond

Written evidence of the issuer's obligation to repay a specified principal amount on a certain date (maturity date), together with interest at a stated rate, or according to a formula for determining that rate. Bonds are sometimes used as a source of financing for large scale or expensive projects to allow projects to proceed rather than wait until the funds can be accumulated.

Capital Budget

Financial plan of capital project expenditures for the fiscal year beginning October 1. It incorporates anticipated revenues and appropriations included in the first year of the five-year Capital Improvement Plan (CIP), and any anticipated unspent appropriation balances from the previous fiscal year. The capital budget is adopted by the Board of county Commissioners as a part of the annual county budget.

Capital Improvement

Physical assets constructed or purchased to provide, improve or replace a public facility, and which are large scale and high in cost. The cost of a capital improvement is generally nonrecurring and may require multi-year financing. Physical assets which have been identified as existing or projected needs in the individual Comprehensive Plan elements shall be considered capital improvements.

Capital Improvement Element (CIE)

The Capital Improvement Element of the Comprehensive Plan identifies projects and financing for projects that are required to provide services to the areas of the county where growth is occurring in order to maintain levels of service that are required by the Comprehensive Plan.

Capital Improvement Plan (CIP)

A proposed plan, covering each year of a fixed period of years, for financing long-term work projects that lead to the physical development of county infrastructure. Manatee County develops a five-year CIP.

Capital Project

A non-recurring expenditure of $250,000 or more for the construction, installation, or acquisition of capital facilities, or the acquisition of interests in land.

Capitalized

Term used to classify assets which have a useful life greater than one reporting period.

Comprehensive Plan

A document adopted by the Board of County Commissioners that sets forth goals, objectives and policies for future land use, and establishes level of service standards that will be needed to meet the infrastructure needs of the county.

Collector Road

A route providing service which is of relatively moderate average traffic volume, moderately average trip length, and moderately average operating speed. Traffic movement is a priority but there is a higher degree of land access than with an arterial road, allowing such a route to collect and distribute traffic between local roads or arterial roads and serve as a linkage between land access and mobility needs.

Concurrency

Level of service that is required to meet the specified level of service required by the Comprehensive Plan.

Contingency Funds

Monies set aside, consistent with statutory authority, which subsequently can be appropriated to meet unexpected needs.

Community Redevelopment Areas (CRAs)

Means of financing activities from the anticipated incremental increase in tax revenues resulting from the redevelopment of an area. Also known as Tax Increment Funds (TIFs).

Current Year Appropriation

The current year adopted budget adjusted to reflect any budget amendments done during the current fiscal year.

Debt Service

Payment of interest and principal on an obligation resulting from the issuance of bonds.

Deficit

Excess of expenditures over revenues.

Department

Manatee County's organizational structure groups programs or divisions into departments by functional similarities. Departments report to the County Administrator.

Designated Funds

Funds that are set apart for a specific purpose to fund on-going or one-time expenditures. Examples are bond proceeds, reserves or "pay-as-you-go" reserves for future facility renewal and replacement projects found mostly in the Enterprise Funds.

Division

Divisions are the units of government which provide services directly to the public and other agencies. Divisions are organized within departments by functional similarity.

Ending Fund Balance

Funds carried over at the end of the fiscal year. Within the fund, the revenue on hand at the beginning of the fiscal year, plus revenues received during the year, less expenses equals ending fund balance. The Ending Fund Balance becomes the Beginning Fund Balance in the next fiscal year.

Enterprise Fund

A fund which pays for its cost of operations from user fees and does not generally receive property tax or general revenue support. County Enterprise Funds include Manatee County Public Utilities, Landfill, Golf Course, Civic Center, Port Authority, Stormwater Utilities, and Mass Transit.

Expenditure

Decrease in net financial resources. Expenditures include current operating expenses which require the current or future use of net current assets, debt service and capital outlay.

Fiscal Year

A twelve-month period (October 1 through September 30) at the beginning of which the county implements a new budget based on expected revenues and expenditures, and at the end of which the county determines its financial position and the results of its operations.

Fixed Assets

Accounting classification of assets such as property, plant, and equipment which are capitalized.

Fund

A self-balancing set of accounts designated and accounted for separately for the purpose of restricting specific revenues that are then spent for specific activities.

Fund Balance

Amount available within a fund at the close of a fiscal period which can be carried over as non-recurring revenue for the upcoming fiscal period.

Funding Sources

Type or origination of funds to finance ongoing or one-time expenditures. Examples of CIP funding sources include, but are limited to, user fees, general revenues, gas taxes, grants, impact fees, contributions and bonds.

Generally Accepted Accounting Principles (GAAP)

Uniform minimum standards and guidelines for financial accounting and reporting as authorized by the Governmental Accounting Standards Board (GASB). The standards and guidelines include details practices and procedures and broad guidelines of general application.

General Revenue

The revenues of a government other than those derived from and retained in a proprietary, special revenue, or trust and agency fund. In Manatee County, the majority of general revenues come from ad valorem taxes.

Governmental Funds

Funds used to account for the acquisition, use and balances of expendable financial resources and the related current liabilities – except those accounted for in proprietary funds and fiduciary funds.

Impact Fees

Impact fees are a fee that is imposed by the County on new or proposed development projects to pay for all or a portion of the costs of providing public services to the new development. Impact fees are a charge on new development to help fund and pay for the construction or needed expansion of offsite capital improvements. These fees are implemented to help reduce the economic burden on the County associated with population growth within the area.

Infrastructure Sales Tax (IST)

The levy and collection of a one half-cent sales surtax collected by the Florida Department of Revenue and distributed to the County and the municipalities within the boundaries of the County, used to finance, plan, and construct infrastructure (as defined in Section 212.055(2), Florida Statutes), and limited to the following types of projects and equipment: roadways, sidewalks, intersections, street lights, infrastructure for law enforcement, emergency response, libraries, parks, waterways, public buildings and stormwater.

Interfund Transfers

Transfers of cash between funds without requirement for repayment.

Intergovernmental Revenues

Revenues received from other governments including the federal, state, and other local governmental entities.

Level of Service

An indicator of extent or degree of service which is, or will be, provided by a facility. Level of service standards, as used in the comprehensive plan, are targets or objective with which compliance is required. Levels of service are established using one or more infrastructure standards and may also include use of one or more performance standards.

Local Road

A roadway providing service which is of relatively low traffic volume, short average trip length or minimal through traffic movements and high-volume land access for abutting property.

Mandate

A requirement imposed by a legal act of the federal, state or local government.

Mass Transit

Passenger services provided by public, private or non-profit entities such as the following surface transit modes: commuter rail, rapid rail transit, light rail transit, light guideway transit, express bus and local fixed rout or demand-response bus.

Operating Budget Impacts

Expenditures directly related to the cost of operating and/or maintaining the capital improvement upon completion of the project.

Paratransit

Transit service, including ridesharing, car or van pools, demand responsive buses, and other public transit services, which are characterized by their nonscheduled, non-fixed route nature.

Personal Services Expenditures

Expenditures for county employees including regular wages, overtime, contributions to the State Retirement System, Social Security, health and worker's compensation insurance premiums, and unemployment compensation costs.

Potable Water

Water which is satisfactory for drinking, culinary, and domestic purposes and which meets the appropriate requirements of the Florida Department of Environmental Regulation.

Potable Water Facilities

A system of structures designed, constructed or used to collect, treat or distribute potable water, which includes water wells, treatment plants, reservoirs, and distribution mains.

Preserve

Resource based preserve operated by the county for the primary purpose of environmental preservation and public enjoyment of environmentally sensitive lands.

Prior Year Appropriation

Includes funds budgeted for projects in prior years or through a budget amendment done during the current year prior to the date of the Proposed CIP.

Project

See Capital Project.

Property (Ad Valorem) Taxes

Revenue which is collected on the basis of a tax rate applied to the taxable valuation of real property.

Proposed Budget

The budget submitted by the County Administrator to the Board of County Commissioners within 15 days after the certification of the ad valorem tax roll by the Property Appraiser.

Proprietary Fund

A set of segregated revenue and expenditure accounts set up for the purpose of showing net income, financial position, and changes in financial position. Enterprise funds and internal service funds are proprietary funds.

Reserves

Included in this category are funds required to meet both anticipated and unanticipated needs; the balance of anticipated earmarked revenues not required for operation in the budget year; those required to be set aside by bond covenants, and accumulated funds set aside to finance capital construction on a pay-as-you-go basis.

Revenue

Taxes, fees, charges, special assessments, grants, and other funds collected and received by the county to support the services provided.

Right of Way

Land in which the state, county or municipality owns the fee simple title or has an easement dedicated or required for a transportation, utility or other use.

Solid Waste

Sludge from a waste treatment works, water supply treatment plant or air pollution control facility; or garbage, rubbish, refuse or other discarded material, including solid, liquid semisolid, or contained gaseous material resulting from domestic, industrial, commercial, mining, agricultural or governmental operations.

Solid Waste Facilities

Structures or systems designed for the collection, processing or disposal of solid wastes, including hazardous wastes, and which includes transfer stations, processing plants, recycling plants and disposal systems.

Special Revenue Fund

A fund used to account for the proceeds of specific revenue sources (other than expendable trusts or major capital projects) that are legally restricted to expenditures for specified purposes.

Stormwater

The flow of water which results from a rainfall event.

Stormwater Runoff

Portion of precipitation, which is not passed into the soil by infiltration, evaporated into the atmosphere, or entrapped by small surface depressions and vegetation, and which flows over the land surface during, and for a short duration following any rainfall.

Surplus

Excess of revenues over expenditures.

Taxes

Compulsory charges levied by a government for the purpose of financing services performed for the common benefit. Does not include user fees or special assessments.

Tax Increment Fund (TIF)

Means of financing activities from the anticipated incremental increase in tax revenues resulting from the redevelopment of an area. Also known as Community Redevelopment Areas (CRAs).

Tourist Development Tax

A tax collected on hotel rooms and other lodging rentals of six months or less. In Manatee County, one penny of the five cents collected is reserved for beach renourishment and beach improvement projects. Tourist tax monies other than this cent may be used for other tourist related projects or facilities.

Transfer

A movement of monies from one fund to another fund for the purpose of accurately accounting for expenditures. Transfers are expenditures to the fund they are being transferred from and revenues to the receiving fund. Because transfers are again budgeted as expenditures in the receiving fund, they are not included in the net budget to avoid counting the monies as expended twice.

User Fees

The payment of a fee for direct receipt of a public service by the person benefiting from the service.

Unincorporated Municipal Services Taxing Unit (UMSTU)

Unincorporated areas within Manatee County are within the Unincorporated Municipal Services Taxing Unit. Residents of the district are assessed a millage rate by the county to provide services which would be provided by a municipality if the areas were incorporated.

Voted Millage

Property tax levies authorized by voters within a taxing authority. Bond issues that are backed by property taxes are a common form of voted millage in the State of Florida. Such issues are called general obligation bonds and may be used to finance large capital projects.
