MANATEE COUNTY INDUSTRIAL PRETREATMENT PROGRAM

TOXIC ORGANIC MANAGEMENT PROGRAM (TOMP)

1. INTRODUCTION

Federal Regulations require certain industries subject to pretreatment standards to account for all organic substances used in their production operations, and to provide this information to the approved control authority. The Control Authority is Manatee County Florida which has an approved industrial pretreatment program. The County also has the authority to require this Toxic Organic Management Plan (TOMP) be submitted by any industry, which in the County's judgment has reasonably demonstrated expected toxic organics present in the industry's regulated waste stream. Typical sources of organics include spent solvents used in degreasing and paint stripping operations. The types and sources of organic substances vary considerably from industry to industry. Therefore, you may need to contact your chemical supplier for Material Safety Data Sheets (MSDS) to determine the actual constituents of the trade name products you use.

Total Toxic Organics (TTO) is defined as the total sum of all quantifiable concentrations of organic substances at concentrations greater than 0.01 mg/l listed in 40 CFR Part 401.15, and included in Item 3 (Inventory), below.

2. INDUSTRY IDENTIFICATION

Industry Name: _____

Location Address: _____

Mailing Address: _____

E-Mail Address: _____

Telephone Number: _____ Fax Number: _____

Industry Contact: _____ Title: _____

3. INVENTORY

List all toxic organic compounds used or stored in your facility in the following table. Describe the location (source) of each toxic organic compound in your facility, as well as its current use in your facility. Please use additional sheet(s) as necessary. Attach copies of MSDS for all listed toxic organic compounds. If no toxic organic compounds are used or stored in your facility, mark **NONE** on the table.

<u>Toxic Organic Compound</u>	<u>Location or Source of Toxic Organic</u>	<u>Current Use of Toxic Organic Compounds</u>

4. METHOD OF DISPOSAL

A. Are any of the compounds listed in Item 3 discharged directly (intentionally) into the Manatee County sanitary sewer? If **NONE**, go to Item 4D (check one box)

☐ **ALL** ☐ **SOME** ☐ **NONE**

B. If all or any toxic organics are discharged, indicate the compounds which are discharged, and estimate the amounts discharged, into the Manatee County sanitary sewer system per operational day, in the table, below.

<u>Organic Discharged</u>	<u>Amount per day</u>	<u>Dilution or Treatment</u>

C. Are the organics diluted or treated in any way before being discharged? Explain.

D. If you are using and wasting organics listed in Item 3, but are not discharging them into the Manatee County sanitary sewer system, please check the method of disposal that you are currently utilizing:

- ☐ **Recycle/Reclamation at your facility**
- ☐ **Incineration at your facility**
- ☐ **Contract hauler for recycle**
- ☐ **Contract hauler to approved off site hazardous waste disposal site**
- ☐ **Other (Please specify _____)**

E. Are adequate measures in place to prevent any toxic organic compounds (either in use or storage) from being discharged directly or indirectly (spills, leaks, etc.) to the Manatee County sanitary sewer system? Explain.

5. LABORATORY RESULTS

If available, attach any laboratory results of toxic organic compounds tested in your wastewater, if they are discharged to the Manatee County sanitary sewer system.

6. CERTIFICATION

If you believe “toxic organic compounds” are not being discharged to the Manatee County sanitary sewer system from your facility, and if you answered “**NONE**” to item 4A of this form, please attest to the following certification statement:

“Based on my inquiry of the person or persons directly responsible for managing compliance with Federal Pretreatment Standards for Total Toxic Organics (TTO), I certify that to the best of my knowledge and belief, we are not currently discharging concentrated toxic organic compounds to the Manatee County sanitary sewer system.”
